## PREFACE

In presenting this outline of the Sumerian language I wish to make a few preliminary statements for those who will be unable to control my statements from lack of first hand acquaintance with the inscriptions. The difficulties of Sumerian are not alone grammatical and lexicographical but also epigraphical and it is in fact the latter difficulty which must be first overcome. It will never be possible with transcriptions, even though they be most accurate, to gain a clear idea of the genius of the language. The idea in the mind of the writer is often conveyed by the form of the sign as well as by the sound of the word and the gram-In the list of phonetic values appended matical inflection. to this volume I have attempted to give some indications on this point, but a grammar cannot be extended to include epi-The reader will observe also that I have written graphy. no chapter upon Syntax. This is due to the fact that the language is so thoroughly agglutinative that Etymology and Syntax cannot be separated.

The preponderating influence of Sumerian in Baby-

lonian and Assyrian culture has become so manifest in recent years that Sumerology must now be regarded as indispensable to a thorough understanding of Babylonian grammar, as well as of Babylonian religion, law, literature and art. I have no theory concerning the linguistic affinities of this remarkable people. As a negative result of my studies I am convinced that it has no affinity with either the Caucasian, Aryan or Semitic groups. This side of the problem has not occupied my attention as the futility of such efforts is at once apparent. Our task at present must be rather to interpret the literary remains of this ancient civilisation, whose language continued to be sacred in religious literature even in the last century before our era.

Stephen Langdon.

#### CHAPTER I.

#### Historical Outline.

§ 1. Šumer is a term applied by the inhabitants of the lower valley of the Tigris and Euphrates to their native land, or at least to a part thereof. The ideogram KI-EN-GIN, which according to phonetic laws became  $\Sumer$ , may be analysed into ki(n) 'place, locality', and en-gin, 'the faithful lord'<sup>2</sup>. This term occurs in an inscription upon a vase presented to the temple of Nippur by Lugalzaggisi and is there used apparently for the district of which Nippur was the capital<sup>3</sup>. Lugalzaggisi, who claimed the title, 'king of Erech, and king of the land', and who mentions most of the important Sumerian cities as part of his empire, used the word land can always and it designate what we understand to be ancient land can be possession of Nippur seems to have carried with it the title, 'king of the land'. land carried with it the title, 'king of the land'. land carried by land is explained by land on a lexicographical tablet<sup>3</sup>. The ideogram is followed frequently by the phonetic complement land.

Sumer as a geographical term.

- 1. So we infer from the semitic loan-word *šumēru*. By vowel harmony *KI-EN-GIN* became *KI-IN-GIN*. Earliest mention of Šumer is by Eannatum, *Stèle des Vautours*, rev. VIII.
- 2. Cf. the title of Ninlil, goddess of Nippur, en-zid kalama, CT. XXIV, 6, 15, and of Nisaba the grain goddess in the Nippurian pantheon, ibid., 9, 37, both characterized as the "faithful ruler of the land". See also Oppert, quoted by Weissbach, Sumerische Frage, p. 18.
  - 3. HILPRECHT, OBI. 87, II, 21; also OBI. 90, 4.
- 4. Scholars universally speak of the Shumerians as the Sumerians, a slight inaccuracy due to the founders of the science. I have not ventured to correct the term.
  - 5. King, Creation, I, 217, 1.5.
  - 6. Cf. ibid., l. 4. ki-en-gi-rά Gudea Cyl. A 11, 16; 21, 25 and Β 22, 20. ki-GRAM. SUM.

Sumer, therefore, probably designated the region of Nippur and as Nippur was the religious centre of this ancient people the term acquired a larger significance, but only in later times was it used for the entire country from Babylon to the Persian gulf. Throughout the classical period the Sumerians knew no general geographical or racial term except kalama 'the land', the home land, by which they distinguished themselves and their land from the kur or 'foreign land'. Sargon, the Semitic king of Agade', a city in the region of Sippar and north of Sumer, one of the first foreigners from whom we have any information concerning the Sumerians, calls himself 'king of Akkad and of the sovereignty of Enlil'. The Semitic kings of Kiš, the most important of the early Sumerian cities on the northern boundary? which seems to have fallen into the hands of the Semites at an early date [circa 3000 B. c.], also ruled at Nippur and like the Semitic dynasty of Akkad shewed great respect to the cult of Enlil. Nippur, therefore, was regarded by both Sumerians and foreigners as the real centre of Sumerian civilisation and we thus readily understand why the local term Šumer became racially and linguistically significant.

in-gi(n) and ki-in-gi-ra in late texts are employed for mātu 'land', simply (SAI. 7331) and ki-in-gin = irsitu 'earth', IV R. 1 a, 22 (v. Hommel, Geographie, 242 n. 4). Hommel correctly derived sumer directly from kingin by assuming the palatalisation k> š before i and n>r. Prince, Materials for a Sumerian Lexicon, p. 206, has given an interesting derivation of kengin by analysing it into kin 'land', and gin 'reed', 'land of the reed'. See also Lenormant, Études, 2nd Série, p. 29. Lenormant not only derived sumer (the u arising from the labial m) from kengin, but with Sayoe connected it with the Biblical אונער בון אונער הוא האונער בון אונער בון או

- 1. The city a- $g\alpha$ - $d\acute{e}$ -(ki) is identical with the later ak- $kad\ddot{u}$ -(ki), usually written ari-(ki), v. Meissner, SAI. 8878. The name of the city is written a- $g\alpha$ - $d\acute{e}$ -(ki) in all periods and is distinct from ari-(ki) the 'land of Akkad'.
- 2. Usually located on the Tigris opposite Sippar, but by Hommel, south-east of Babylon, and by Thureau-Dangin, OLZ. 1909, 205, east of Babylon on the Shatt-el-Nil.
- 3. Ninib's temple at Nippur é-šu-me-DU should perhaps be read é-šu-me-ra, for references, v. SBP. 346 and the n. pr. Amel-é-šu-me-ra, BEP. VI<sup>2</sup>, 37, 8.

§ 2. The pronunciation *šumer* is known to us only by the Semitic loan-word *šumēru*. The Semites designated this language as the *lišan šumēri*, or language of Šumer, and their own language as akkadū or Akkadian. So for instance a date promulgated by Samsuditana as the official Sumerian date formula for the year has a Semitic translation, called akkadū-ša, 'its Semitic rendering'. An interlinear text containing Sumerian lines and a Semitic translation under each line has the note [šapliš] akkadā eliš šu[merā], 'below the Akkadian (Semitic), above the Sumerian'. In ZA. IV, 434, Bezold published a tablet dealing with geographical and racial terms. Line six should probably be restored, eme-KU nig-sīg-ga eme [akkadī (ki)], which is there translated by lišan šumēri tamšil akkadī — Sumerian is the counterpart of Akkadian. Bezold in Florilegium Melchior de Vogüe, 53-8, has discussed the question a new, but with impossible conclusions concerning some of the texts.

The usage of the two words \*\*sumer\*\bar{u}\$ and \*akkad\bar{u}\$ appears clearly in an inscription of A\*surbanipal, who describing his early education says: "Among the craftsmen I busied myself (?); the counsel and wisdom of the heavens with the wise masters (?) I solved. I read the dreadful mysteries which should not be revealed (?). To translate into Akkadian the skilfully made tablets which were obscure in Sumerian I was restless (?)\(^3\)." Here the word \*\*sum\bar{e}ru is ideographically expressed by the Sumerian eme-KU which seems to be a late form invented by the Semites. eme-KU has not been successfully interpreted. In those texts where it occurs the form of KU gives no clue as to which of the three original signs \(\begin{array}{c} \begin{array}{c} \begi

Sumerian \_as a language.

tongue'. Absolutely no valid reasons exist for the old interpretation, 'enchanter's speech', and the other well known suggestion that KU means rubû, 'prince', therefore, 'language of the chiefs, or aristocrats' is doubtful. In any case this designation of the Sumerian language is late and may have been applied by the Semites to the classical speech to distinguish it from the dialects. The geographical term mat eme-KU, or land of the Sumerian language also occurs in the late period'.

Sumer and Akkad.

§ 3. The kings of the Sumerian dynasties of Ur, Isin and Larsa employed the title 'king of ki-en-gi (sumer) and akkad', but the Semitic conqueror, Hammurabi, used the words mat šu-me-ri-im ù ak-ka-di-im. This double expression to designate southern and northern Babylonia in their ancient racial divisions as Sumerian and Akkadian (Semitic) continued to be used by the Assyrians and Babylonians to the end of their political existence and was current even among the Persian kings. Strictly speaking we should designate these two languages of the cuneiform script as Sumerian and Akkadian, the terms which the Babylonian and Assyrian scholars themselves adopted. I shall, therefore, designate the Semitic dialects, as Akkadian, Babylonian and Assyrian. non-Semitic and primitive language of the inscriptions I adopt the term Sumerian, a word which the later representatives of this people seem to have recognized as a term applicable to their country and race. [For a discussion of the dialects of Sumerian see the chapter on Phonetics].

Lash and Nippur. § 4. The early history of Sumer is imperfectly known. We possess literature from but two important centres Lagash and Nippur. Of important literary remains those of Lagash centre of the Ninib cult, closely

<sup>1.</sup> See LEHMANN, op. laud., 101.

<sup>2.</sup> If this suggestion be correct we should read eme-dur.

<sup>3.</sup> III R. 4 a, 51, there explained by eme-luģģa, "the pure speech (?)". For the use of the word šumērū by Semites in the early period, v. CT. XV, 2, 3, šu-barūm lū iršit hasazimma šattišamma šumirūm liktasazzi, may the Šubarian be a possession of plunder; yearly may the Sumerian plunder her. See Dhorme, RA. VII, 13-15 for this passage.

connected with the Nippurian pantheon, go back to a period considerably anterior to that to which the earliest long inscriptions of Nippur belong. A few fragments from Nippur date, however, from the earliest period, so that a decision as to the greater antiquity of either city is impossible. For practical purposes I have divided the literary remains of the Sumerians into two great periods, those which were written before the dynasty of Ur founded by Ur-Engur [circa 2474 B.c.], and those which belong to the period of the dynasties of Ur [2474-2357], Isin [2357-2132], Larsa¹ and Babylon [2232-1929].

§ 5. The literature of the classical period may be divided into three classes, historical, commercial and religious. Documents of the third type are extremely rare in this period. If the Sumerians composed hymns, liturgies, epics and mythologies before 2500 B.c. none have survived. The only document which we might designate as distinctly religious in motif of composition, the account of the building and dedication of the temple of Lagash (Širpurla) recorded on two great clay cylinders of Gudea [circa 2500] offers little opportunity for estimating the kind of religious literature which the ancient Sumerians must have possessed. Gudea speaks of his sacred literature and the temple singers are mentioned from the earliest period onwards. The type of document classified under the general heading of commercial literature, if we may apply the term literature to contracts, sales, conveyances, lists of temple and private property, yearly and monthly accounts of temple and palace estates, constitutes by far the most fully represented source of Sumerian

Types of literature.

- 1. The principal kings of this dynasty are Eriaku and Rim-Sin.
- 2. The two Sumerian epics concerning Ninib of which late fragmentary copies have been published by Hrozný, MVAG. 1903, pt. 5, are copies of Sumerian originals, fragments of which have been excavated at Nippur and published by RADAU, BE. XXIX, and translated BE. Series D, vol. V, pt. 2. The original text comes from the period of the Isin dynasty.
  - 3. St. B. 8, 21.
- 4. See the introduction to my Sumerian and Babylonian Psalms. Also the following passages; the "chief temple singer", TSA., no.2, rev. I; no. 5, obv. II, period of Urukagina. The "inferior temple singer", DP. 87, II (Lugalanda); DP. 99, IV; 100, IV.

literature. In as much as most of these business documents mention the contemporaneous rulers either as persons interested in the transaction itself or in the date formula, they form one of the chief sources of ancient history. A considerable amount of material from this class of literature has been utilised in these grammatical and lexicographical studies.

Material forms.

- § 6. It would be difficult to find any Sumerian inscription which we could call an "historical document" in the modern or Greek sense of the term. The stone statues, steles, clay cones, inscribed field-stones, stone and clay tablets offer the only adequate means of studying early Sumerian grammar at Lagash. Historical inscriptions of the early period from Nippur are curiously enough all cut upon stone vases.
  - 1. Represented only by the inscribed statues of Urbau and Gudea.
- 2. The only important stèle is the Stèle des Vautours of Eannatum (Lagash); cf. the small stone column of Eannatum, Déc. ép., XLIV, and RA. IV, 108.
- 3. Most important are: the cone of Entemena, RA. IV, pl. II, inscription begins at the larger circumference; three cones of Urukagina, A, B, C, in Déc. ép., L, LI and LII, B and C variants and all refer to the same events; inscription begins at the point.
- 4. Three field-stones of Eannatum with long inscriptions,  $D\acute{e}c.~\acute{e}\rho$ ., XLIII, XLIV (defaced) and one unpublished in Constantinople, SAK. 22. Small field-stones of this ruler in  $D\acute{e}c.$ , pls. 2 and 2 bis.
- 5. Urnina, five small stone tablets, reverse uninscribed, only one published, Déc. ép., XXXVI; see SAK. 3 f. Alabaster tablet of Entemena, Déc. ép., XLVI. A stone tablet of Urukagina, Cat. de Clercq, t. II, pl. VIII, and of Ur-Bau, Déc., pl. 8 bis, both with rev. uninscribed.
- 6. The earliest in the form of baked bricks in imitation of the stone tablets, [Eannatum] two baked bricks, on which the cuneiform signs are already beginning to appear,  $D\dot{e}c.\dot{e}\rho.$ , XLV. [None with reverse] An historical clay tablet in same shape as the ordinary business document, RA. VI, opp. p. 28, with reverse (Urukagina). Several short inscriptions on bricks of Gudea, v. SAK. 140 f.
- 7. Short vase inscriptions from a period contemporaneous with or later than Ur-Nina of Lagash, are OBI. 94, 95, 96, 97, 98, 99, 106, 111, 112, 113, 114. The most important document from Nippur is the long vase inscription of Lugalzaggisi, contemporary of Urukagina, OBI. 87. From the same period the fragments of Lugalkigubnidudu and Lugalkisalsi, OBI. 86 A + B. A vase of Entemena from Nippur OBI. 115-117. To the inscriptions written on the various objects mentioned, may be added the short dedications on the stone door sockets of La-

§ 7. The inscriptions from the earliest period which may be said to represent the oldest script in Asiatic civilization reaching back to a period certainly as early as 4000 B. c. are in the probable order of their antiquity; Black stone tablet, General Theological Seminary, New York City, v. AJSL. XXIII, 19, reverse uninscribed; stone tablet with rude figure of a man seizing one of three small trees (?), wearing a low cap with two tall palm leaves; inscribed both obv. and rev., Déc. ép., pl. I bis; Scheil, Notes d'Épigraphie, no. L. AO. 2753, stone tablet from Šuruppak, obv. and rev., published and translated by F. Thureau-Dangin, RA. VI, Contrats archaïques, no I. Semi-circular stone resembling Blau A, Déc., pl. I ter, no. 6. Flat stone tablet, reverse uninscribed, ibid., no. 5. Fragment of a list of purchases, BM. 22506 in CTV, 3.

\*Oldest inscriptions.

These inscriptions upon stone are all business records shewing that the Sumerians in the first stages of their civilization used writing for practical purposes. The writing is linear and the scribes compose the signs, some of which are still not far removed from pictographs, by combinations of straight and curving lines.

§ 8. Inscriptions shortly before Ur-Nina (circa 3500-3400): Vases of early Patesis of Kiš from Nippur, OBI. 108-9, and 93; Mass of Arms of Mesilim, Dec., pl. I ter; Lapislazuli tablet of Lugaltarsi, CT. III.

1. The so called Blau Monuments now in the British Museum, Babyfonian and Assyrian Room, case D, nos. 14 and 15 are declared to be forgeries in the official Guide 1908, p. 156. Several of the entries, however, make good sense, for example 20 water buckets, 20 linen garments, 2 woollen garments, 20 jewels, A. obv., cases III, VIII, X, XII. Nofice also the rev. case I, 1 1/2 bur for the katu priest, where the numerical system is exactly the same as in AO. 2753. pl. no. 1. To this period Th.-Dangin assigns CT. V, 2, no. 12146, v.SAK. 170.

Perhaps here belongs the marble vase, DP., pl. I  $^{4},\,\mathrm{all}$  in linear style.

Clay tablets, on which the writing is already becoming cuneiform, all business documents, RTC. 1-8 and DP. 33-38, assigned to this period by Thureau-Dangin and Allotte de la Fuye. The former also places the contracts from Šuruppak RTC. 9-15 before Ur-Nina, but the archaic forms which he adduces [p. II, note 1] may be due to local usage. [DP. 34 mentions the god of Šuruppak]. RTC 12-15 edited by Thureau-Dangin, RA. VI, no. 4.

Dynasty of Ur-Nina.

- § 9. The dynasty of Ur-Nina; (kings and patesis of Lagash).
- 1. Ur-nina; five historical inscriptions on stone tablets, one metal plaque, and one stone door socket. An inscription traced in linear style on several baked bricks taken from a wall<sup>3</sup>. A diorite plaque containing references to a religious ceremony, Déc. ép., XXXVII, translated by Th.-Dangin, SAK. 6, but repeated by Toscanne, RT. XXX, Textes Divers, p. 6, without reference to previous editions (!). See also ibid., p. 16. The secular cuneiform script of the business documents is not yet recognised by the royal scribes. Approximately the same period, a record of purchase of land inscribed on a statue of Lupad of Umma<sup>4</sup>, Comptes rendus 1907, 769-772<sup>5</sup>.
- 1. The god sukurru is mentioned, and cf. especially the form of  $\bigvee$  identical with  $\bigvee$  I. 4, occuring also on a tablet from Šuruppak, RTC. 12, I, 4: with the n. pr.  $KA^{-d}$  sukurru-sida on DP. no. 1, cf. RTC. 13 obv. IV, 5. BM. 22470 [CT. X, 2], a dedication to ituNin-dun-bád by Kalag-ki-azag belongs to this period. The syenite plate DP. no. 2, evidently a record of a transaction concerning commodities, although inscribed on stone, shews tendencies toward the secular cuneiform script and hence cannot be anterior to Ur-Nina. Short historical inscriptions from Kiš (SAK. 160, 1-4), Umma (ibid., 150, no. 1), and Nippur (ibid., 148), all belong to this period.
- 2. Ur-Nina, E-annatum, Enannatum I; Enterrena, Enannatum II, (Enetarzi) Enlitarzi, Lugalanda.
  - 3. RA. IV, 91; for details concerning the historical inscriptions, v SAK. 2 ff.
  - 4. GIŠ-HU.
  - 5. Text ited., 1908, March. See also Toscanne, RT. XXX, Textes Divers, p. 3.

- 2. Eannatum; historical inscriptions of more extensive nature, notably the Stèle des Vautours, four stone bowlders (two with long inscriptions), two baked bricks, a short stone column and a basalt bowl.
- 3. Enannatum I; three short inscriptions on a bowl, baked brick and coat of arms.
- 4. Entemena; numerous historical inscriptions on stone door-sockets, one alabaster tablet, two vases, two baked bricks, one baked clay peg and a large cone. One business document is dated in this reign!. In this period the secular script is used on the monuments?
- 5. Enanuatum II; one short inscription on a door-socket. Perhaps the record of sale of land DP. 31.
  - 6. Enetarzi; one commercial document, DP. 393.

A letter addressed to E. as priest(?) of Ningirsu, AO. 4238, v. RA. VI, no. 4.

- 7. Enlitarzi; documents dated in his reign, RTC. 17, 26, 57, 60, 70. DP. 42, 92, 93, 94, 110, 111. Nik. 10, 42, 67, 170, 193, 279. Two seals, one of the patesi and one of his consort, DP. pls. V-VII and Nik. 323.
- 8. Lugalanda; documents dated in his reign, RTC. 19, 25, 27.8, 30-3, 35, 37, 39-54, 58, 61, 64, 66, 68, 71-2, 75. TSA. 1, 6, 10, 21, 24, 26, 37, 43, 49.

§ 10. Contemporaneous kings of Kiš, Urumuš and Maništusu; a few dedicatory inscriptions on vases, one coat of arms, all probably from Nippur [Semitic]. The Obelisk of Maništusu found at Susa and

Kish.

- 1. RTC. no. 16. Translated by Langdon, Babylonia and Palestine, 56.
- 2. One historical notice from Umma in this reign, SAK. 150, no. 2.
- 3. Translated by Allotte De DA Fuye, Hilprecht Annicersary Volume, 128.
- 4. The tablets cited as TSA, are all translated by DE GENOUILLAC in the book where they are published. He has utilised most of the texts cited as RTC, in his valuable introduction.

now in the Louvre is the most important early Semitic record in existence. Published by Scheil, *Délégation en Perse*, vol. II, 1-52. Analysed and commented upon by Hrozný, *Vienna Oriental Journal*, XXI, 11-43. For the proper-names v. Hoschander, ZA. XX, 246-302, only letters A-B. [SAK. 160-3.]

Urukagina.

- § 11. Engilsa and his son Urukagina1.
- a) Historical inscriptions of Urukagina are numerous. Three cones and one plaque, all of baked clay, give a detailed account of civil institutions. A tablet describing the sack of the city by Lugalzaggisi. Fragment of a brick, one stone tablet, a door-socket inscription, three small votive inscriptions.
- b) The commercial documents of this reign are also numerous: Pinches, Amh., nos. 2-3. RTC. 20, 48, 63, 73; TSA. 2-5, 9, 11-16, 18-20, 22-3, 25, 27, 30-6, 40-42, 48; DP. 27, 40, 45, 48, 51, 54, 60, 66, 69°, 74, 77, 82, 98-9, 105-9, 112-123, 128-30, 133, 135-6, 138-9, 141. Nik. 1-3, 5-6, 9, 13, 16, 18-21, 31-2, 35, 46-7, 57, 59-60, 63-4, 76, 146, 155, 208, 230, 244-6, 270, 272-3, 286, 298, 311, 319-22. To this period belong the seals of Eniggal, DP., pl. IX = Nik. 325, Nik. 324, and of Gal, DP., pl. X.

Erech.

- § 12. Dynasty of Umma and Erech.
- 1. Lugalzaggisi; one historical inscription restored from fragments of vases by Hilprecht, OBI., no. 87 and partly translated by him OBI. II 52 ff., later by Radau and Thureau-Dangin, v. SAK. 153-7 (Nippur).
- 2. Lugal-kigubnidudu; two vase inscriptions and one brief dedication on granite blocks.
- 1. Engilsa, patesi of Širpurla, is mentioned on the Obelisk of Maništusu as the father of Urukagina, probably identical with the famous patesi and king of Širpurla Urukagina. This seems to me very likely and if Šargan-šarri and his son Naram-Sin be placed later than Maništusu it would be difficult to date these two kings before 2900 B.C. at the highest possible figure. See DE Genouillac, TSA.XIV, and Allotte DE La Fuye, Florilegium Melchier de Vogüé, 1-14. Engilsa appears in the tablets of Urukagina only as an important person, and may not be identical with the father of Urukagina.
  - 2. Translated by Allotte de la Fuÿe, Florilegium Melchior de Vogüé, pp.8ff.

- 3. Enšagkušanna; two vase inscriptions.
- § 13. The Semitic dynasty of Agade 1.
- 1. Šarganišarri; two door-socket inscriptions, one brick stamp, an inscribed coat of arms and several seals, chiefly from Nippur. [SAK. 162-5].

Agade.

2. Naram-Sin; two stèles and two inscribed statues (found at Susa), two dedicatory inscriptions on vases, brick stamp (Nippur), one slate plaque and one diorite plaque (dedicated to his son) from Lagash; several seal impressions all on tablets from Lagash. [SAK. 164-9]<sup>2</sup>.

To this period TH.-DANGIN assigns about 100 tablets from Lagash, RTC., pp. 44-72<sup>3</sup>. Of these the following are dated in the reign of Šarganišarri; 85+124, 87, 88 (?), 99+136+176, 118. Naram-Sin; 86+106+144.

Three Semitic documents, Bu. 91-5-9, 588-90 [CT. I., pl. 1], one mentioning Sippar, are possibly from this period. The commercial documents frequently contain Semiticisms, and a large number of the proper names are Semitic. Dhorme, Les noms propres babyloniens à l'époque de Sargon l'ancien et de Narām-Sin, BA.VI, has greatly exaggerated the Semitic element at Lagash in this period. The texts prove, however, that the inhabitants of Sumer were already a mixed race.

- 1. In the inscriptions of Maništusu, Sargon and Naram-Sin, always a-ga-de-ki, but from the period of Ur-engur of Ur generally ki-uri, also uri simply (v. SAK. 190 c, l. 4). Cf. also the form in a date formula of Hammurabi, Hilperett BEP., Series D vol. V, 3 n. 2, ki-uri(ri). The Semites translated ki-uri and uri-(ki) by  $Akkad\bar{u}$ , so that the two names certainly indicate the same place. uri (with the pronunciation tilla(!) so  $s^b$ ) meant also Urartu > Urtu (v. SAI. 5329 and K 621, 4; Rm. II, 2, 5, in ZA. VIII, 345), and even Amoria or the West. Agade at any rate was the name first employed by the Semites and seems to be much older than ki-uri, a name of apparently northern origin.
- 2. These inscriptions written by royal scribes are all Semitic although the population of Lagash and Nippur was still largely Sumerian, as we know from the language of the commercial documents written at Lagash in the reigns of these kings.
  - 3. Other unpublished tablets of this period at Constantinople.
- 4. Cf. the form of the sign nagar REC. 323 on Bu. 91-5-9, 588 obv. 2, and 590, rev. 2, with REC. 93, rev. 2.
  - 5. The texts enumerated under §§ 10 and 13 have not yet received the atten-

Interval between Akkad and Ur.

- § 14. From the dynasty of Akkad to the dynasty of Ur, 2900 -2474.
- 1. Lugal-ušumgal<sup>2</sup>, patesi of Lagash under the dynasty of Agade, left no literary remains; dedicated a seal to Šarganišarri, [SAK. 164 f] and one to Narām-Sin [ibid., 168 k]; frequently appears in documents of the period [Dhorme, op. cit., under Šarru-ušumgal].
- 2. Ur-Bau. One important inscription on his statue, a stamped brick, two baked clay pegs, a door-socket, a stone tablet and a vase. SAK. 60-63.

One tablet dated in his reign, RTC. 1863.

3. Namamahni. A stamped brick and a door-socket. His consort, daughter of Ur-bau, dedicated for his life, a circular stone plate, two coats of arms and a female statue.

One tablet dated in his reign, RTC. 1874.

4. Ur-Ninsun (period not certain) dedicated a large stone bowl to his god<sup>5</sup>. [Here Th.-Dangin places tentatively three patesis known only from single tablets, RTC. 188-190].

tion which they merit in Semitic philology. The remarkable study of Hoshander, cited above, may lead to important results. Still a purely philological investigation of the Obelisk of Maništusu and the tablets mentioned under § 13 is much needed.

- 1. This is the extreme date to which we can assign Šarganišarri according to the commonly accepted interpretation. Allowing 300 years for the reigns under §§ 12+13 and an unknown interregnum between them, we would arrive at 3200 for Urukagina and about 3400 for Ur-Nina. The dates assumed by King in his history of Sumer and Akkad [3000 for Ur-Nina, 2650 Šarganišarri] are in any case hazardously low. Commercial documents of this period, RTC. 180-260, and Pinches, Amh., no. 13.
- 2. The period between Narām-Sin of Akkad and Ur-Bau of Lagash is wholly unknown. Th.-Dangin assigns three rulers Ugme, Urmama and Bašama to this period. None of these left historical inscriptions. Tablets dated in these reigns, RTC 181. 183. 184.
- 3. An apparently ancient seal, Toscanne,  $Textes\ divers$ , [RT. XXX,] p. 9;  $dingir-gal-kur\ uku(?)$ -uš  $ur-d\ ba-u$ , Dingir-gal-kur minister of Ur-Bau. Identification with the patesi uncertain.
- 4. An other patesi Urgar, also son-in-law (?) of Ur-Bau, honored with the dedication of a female statue by a daughter of Ur-Bau, SAK. 63, no. 13.
- 5. RA. II, 79. Valuable because it defines the meaning of  $bur = p\bar{u}ru$ , as 'stone bowl'.

- 5. Gudea. The literary remains of this patesi form the principal source for the study of the language.
- a) Historical'; eleven inscribed statues and two large hollow cylinders of baked clay, 30 and 24 nearly perfect columns averaging 20 cases or lines to the column. Eight inscribed baked clay bricks Three baked clay pegs. Three coats of arms. An inscribed bowl and lion. Three seals. Two female statues dedicated to female divinities by his consort for his life?.
- b) Commercial documents dated in his reign, RTC. 192-199, 200, 201 (?). Pinches, Amh., no. 13. Lau, Old Bab. Temple Records, Catalogue, p. 53, no. 59.
  - § 15. Dynasty of Ur and contemporary patesis of Lagas.
- 1. Ur-Engur. α) Seven inscribed bricks (from Ur, Erech, Larsa and Nippur). Two baked clay pegs (Ur and Lagash). Two door-sockets (Nippur). A stone tablet from Keš (?). A seal dedicated to him. b) Tablets dated in his reign, RTC. 261-5.

Ur-abba, patesi of Lagash. A seal dedicated to him 3.

- 2. Dungi\*. a) Three inscribed bricks (Ur and Susa). One clay peg and one door-socket (Lagash). Clay tablet, copy from a stone tablet (Kutha). Nine stone tablets (Kutha, Lagash, Nippur, Susa, Erech, Eridu), records of building temples, two (Kutha, Erech (?)) dedications on stone tablets for the life of Dungi. Dedicated for his life a female statue, a dead-dress of diorite, a pearl, and two seals (Lagash, Kutha (?), Nippur?). Six seals of individuals dedicated to Dungi\*. Three inscribed weights.
- 1. None of the inscriptions of Gudea can be called historical in a strict use of the term. The statues all refer to the building of temples and the dedication of the statue in question, and the cylinders offer only an elaborate account of the building of the chief temple. The statues are denoted by Gud. A. B. C. D. É. F. G. H. I. K. L. and the cylinders by Gud. Cyl. A. B.
- 2. SAK. 66-147: the female statue B is repeated by Toscanne, *Textes divers*, no. D (without reference to previous editions!).
- 3. See SAK. 228 a) and p. 149. Mentioned on tablets dated under Ur-Engur, RTC. 261, 263-5.
  - 4. Semiticisms are frequent in his inscriptions.
  - 5. Five in SAK. 196 C-G (Lagash) and one in Toscanne, op. cit., po. F.

Ur.

b) The commercial documents dated in the long reign of Dungi must have been enormous. We possess at present tablets from Lagash only, which are two numerous to be recorded individually. RTC., pp. 102-9; 11 tablets certainly from Dungi. 110-155, 25 tablets, v. Introduction, VII f. CT., vol. I, pls. 2-3, 4-5, 6-7, 8-9, 34, 48, 49. CT. In this period most of the important religious texts must have been formulated. Thus far literature of this class is known only from the remains of the older temple library in Nippur. The only religious text mentioning a king of this dynasty is Radau, *Miscel.*, no. 1, second and last tablet of a dirge over the foes of Dungi.

  - 13, 14. unknown.

Nur-Immer, king of Larsa, clay peg.

- 15. Sin-magir. Two fragments of a cone, Weissbach, Miscel, pl. I.
- 16. Damiķ-ili-šu. Six tablets; Scheil, RT. XXIII, 93 and Hilpr., ibid., p. 49.

Sin-idinnam, king of Larsa, three clay pegs and one brick SAK. 208-11.

§ 17. With the disappearance of the dynasty of Isin whose members were themselves Semites, Babylonia must have been thoroughly Semiticised. The contracts written at Babylon, Sippar and Erech are in the main Semitic from the middle of this dynasty onward. Nippur, however, continued to be a Sumerian speaking city as late as the rise of the Sea Dynasty under Iluma-ilā¹. Sumerian seems to have been the official language of Arad-Sin (Eri-agu) and Rim-Sin, last of the kings of Larsa [SAK. 210-221], as well as of a late dynasty at Erech [ibid.,

Sumerian ceases to be spoken.

1. Valuable material consisting of Sumerian business documents from this period is published by POEBEL, BE. VI, pt. 2.

2

220-3]. •RGyal inscriptions of Samsuiluna, Hammurabi, Ammizaduga and Ammiditana occasionally provided with Semitic translations (not interlinear but on different tablets or on a column to the right of the Sumerian) prove the vitality of the ancient literature as late as 2000 B. c.

Religious literature.

- § 18. The religious literature consisting of liturgies, hymns, epics and incantations comes from the Ur and Isin periods. King has published the most perfect examples in CT. XV, 7-30°. Radau gave interesting fragments of liturgies, hymns and epics in the Hilprecht Anniversary Volume and in BE. Ser. D, V, pt. 2. A large fragment of a Nippurian liturgy by Langdon, Bab., III, 241-9. Two long tablets containing incantations are to be found in CT. IV, 3. 4°. An incantation from the same period by Brummer, RT. XXVII, 214-27°, and one by Huber in the Hilprecht Anniversary Volume 1. Fragments of liturgies by Langdon in Babyloniaca, III 74. Lates copies of a large number of the long liturgies have been collected and edited by Langdon, op. cit. #### CHAPTER II.

# The Origin and Principal Characteristics of Sumerian Writing<sup>4</sup>.

§ 19. The inventors of the Sumerian script began by making pictures of objects arranged one above the other in perpendicular columns to form sentences. As they progressed, for convenience the tablet or object inscribed was turned to the left ninety degrees so as to enable the scribe to write from left to right. When this evolution took place the pictographs seem to have remained in their original positions so that they were really written lying on their left sides. This may explain why so few of the signs have retained even a slight resemblance to their original forms. The following signs can still be identified. >>> \formall, a star.

Pictographs.

- 1. The fundamental work on this subject is Thureau-Dangin, Recherches sur l'origine de l'Ecriture cunéiforme, 1898. Not much advance has been made on his work. Notice however the following additions. No. 10 ma, the gunified form occurs often, TSA. 42, obv. II; DP. 105, obv. I; also Blau, A. rev. No. 46, the sign is balag (identified by the author himself). No. 92 perhaps No. 210, was used by the Semites in the early period for as well as No. 261 = sudul, Br. 10875, v. SAK. 82 n. e). 262 gig is used for dugud (263) in Gud. Cyl. A 4, 17 and Ur-Bau St. 3, 6. No. 265 read sulug. No. 285 = usan, Br. 8189. No. 286, the sign inserted appears to be sully yin in the sense of siklu, but with the sense of uku crown. No. 451 used for Gud. B 6, 52, and Cyl. A 16, 8. A great many new forms of known signs and several unidentified forms have been found. No. 4 is not the gunified form of no. 3, see p. 57 n. 3.
- 2. The original forms are not given here; for most cases they may be found in REC. In a few cases I have cited the texts. The importance of this subject for linguistic purposes is slight and has been greatly and ingeniously exaggerated.

half,  $L = + \text{ side}^1$ . A bird. L = balag = balaggu > balangu, evidently a harp or lyre' [cf. DP. 33 obv. I, 3]. Gire, originally a low altar with flames [v. Hilderth, Explorations in Bible Lands, p. 475, figure before the seated person]. L = log arm and fingers (right), L = log arm and fingers (left). L = log garden, originally an enclosure with two trees.

a double yoke of oxen. The neck and head of a man; the same with beard, used for mouth. The tongue in the mouth, tongue. [Yet], simply, used for ime me, by convention only, for speech, curse (Sayce, Accadian Phonology, p. 125)]. We water, represents the surface of a body of water with slight ripples. A, totality, sar, a geometrical figure representing the ancient conception of the surface of the world and also the ground plan of a stage tower. The sun. I igi, the eye.

fish. Important mountain-range. If galu, man. If foot. If egir, hinder part, behind. Originally a man walking from left to right. If wedge. I lordship, lord, an outstretched hand holding a scepter. If mudrue, a combing machine used to prepare wool. If al, a pick. If gud, neck and face of an ox. REC., no. 4, If is the picture of the scorpion; four legs on each side, the two claws and the head are visible; the spider also an eight legged insect is represented by If no. 210. If su (uzu?) in its original form may possibly represent a frame for stretching skins of animals.

<sup>6.</sup> The original sign in SCHEIL, Notes d'Epigraphie, no. L, in RT. XXIII. The wool-comber is the ašlakku, also called mudru = I By association the scribes used this sign for woollen garment šiptu. mudru was also used for reed-mat burû, SAI. 8095 (uncertain).

The sign is ordinarily employed for 'pelt, leather'. \(\sum\_i\) nim REC. 165, a two winged insect.

Gunification.

- § 20. The principal method of inflecting signs to modify their meanings is the so called gunification or addition of several strokes, usually four or five, indicating that the signs so modified denote the superlative of the original. The word gun means literally 'weight, burden' (biltu), and a sign so treated is said to be gunified, that is, it represents the original idea plus the modification of greatness. The grammarians, therefore, in their lists usually place the gunified form after the simple form. The additional strokes were ordinarily added to the top of the sign, or when turned horizontally, to the left of the sign. The following have been so treated.
- 1.  $\forall \downarrow a$ , fish;  $\not\models \downarrow \downarrow a$ ,  $fa-gun\bar{u}$ , general idea 'produce in great quantity', the intensification being upon the idea of the productivity of fish.
- 2. (1-igi, eye, as verb 'to see'. igi-gunū, general sense 'be bright'.
- 3.  $\Longrightarrow$  | | sig, 'be bright' and 'to fix'. Original []. Gunified [] si(g), su(g), same sense.
- 4.  $\vdash \backslash \backslash$  mušen, bird.  $\not\subseteq$  mušen-gunū, 'large bird', by convention only a variagated bird (dar). Both gunified signs 3 + 4 terminated in  $\not\models \backslash \backslash \backslash$ .
- 5. We tun, band. Original. Gunified at left left = left light, prince 2. Gunified within left = left = left uku, crown, 'great band', and left = left = left uku, crown, 'great band', and left = left = left uku, crown, 'great band', and left = left = left uku, crown, 'great band', and left = left = left uku, crown, 'great band', and left = left = left uku, crown, 'great band', and left = left = left uku, crown, 'great band', and 'great uku, crown, 'great uku
  - 6. (itu) month. Gunified imarub3, middle, literally 'great
- 1. The position of the gunification seems to have been chosen according to the shape of the sign. It is often found within the sign. The connection in meaning of the gunified and simple forms has not always been preserved.
- 2. tun, here, is from root tin 'be pewerful', hence 'lord', a sense appearing only in the gunified form 'great lord', prince.
  - 3. Vide CT. XII, 7  $\alpha$ , 29.

month', full-moon, middle of the month. The original sign for month is a gunified of day, i. e., 'the great day'. (murub) is really a doubly gunified form.

- 7. When, head. Ell, statue (salam). The original had the gunification within, in two forms and .
- 8. ( Jul, wicked. Gunified & Jul, so Radau, Miscel., no. 3, 27 and Reisner, TU. 168, rev. 3.
- 10.  $\bowtie$  foot; used only as verb, 'to go' (du) and 'to stand' (gub).

  The gunified form of the verb du is  $\bowtie$ , general sense 'hasten, run'  $= \bowtie$ '.

The gunified form of gub is [a], foundation,  $= \exists b$ . Vide REC., nos. 68, and 306 bis, and K 2839, obv. III, 7 f. = 2835, obv. 4 f.

- 11.  $g\dot{u}$ , neck. The gunified form  $\ddot{u}\ddot{u}$ , Br. Mus. 21445, rev. 8; 21456, rev. 10; both with value gu.
- 12.  $\not\models \mid ma$ , for gunified form, cf. p. 19 n. 1), both signs used for a kind of fig.
- 13.  $\diamondsuit = \bigstar$  Gunified form  $\textcircled{s} = \bigstar$ : both signs have the value ur.
  - 14. (14, the gunified form E(14 only CT. XXVI, 40, col. IV, 10.
- 15. 虹 éš, house, 虹 éš-gunū, great house, a city. Late sign ►⟨巛 .
- 16. 4 = 1 bur (or 18 gan of land, cf. CT. V, 3, col. III, and REC. 509) and 3 = 10 bur. Here the gunification has a purely mathematical sense. The late sign is  $\rightleftharpoons$  and  $\clubsuit$ , the latter never.
- 1. Notice in no. 8 and in REC. 261, the peculiar form of the gunification by placing two lines in a slanting position above and below the sign.
- 2. Falsely regarded by late grammarians as composed of DU with inserted še. The same false analysis pertains to no. 6, which the grammarians analysed into utu inserted <<<.

used in a mathematical sense. Notice that  $\triangleleft$  (umun) and both of the gunified forms (gašan) are employed to express  $b\hat{e}lu$ , lord.

- 17. For a = b, in the classical period generally in the name for Ininni<sup>1</sup>. Gunified form b = b, apparently a late invention. In the syllabar CT. XII, 11 b, 25-35, both signs have the meaning zimu.
- 18. According to the grammarians  $\biguplus bur$  is the  $gun\bar{u}$  of  $\biguplus$ , but the ancient form of bur  $\biguplus$  can scarcely be based upon  $\trianglerighteq \biguplus$ . If however the sign  $\biguplus$  in RTC. 7, III, 3, be really bur, then the connection of the two signs would seem to be assured. Cf. RTC. 7, III, 3, bur (?)-sag with bur-sag, Uruk., Tablette de pierre IV,  $2^2$ .
- 19.  $\Rightarrow$  sir, general sense 'be long', arāku'. Gunified forms
- 20. A few gunified forms terminated in the same sign as the original, REC. 313, 394, 400.
- § 21. Occasionally ideas are expressed by the insertion of one sign into another. For these signs the grammarians employed the formula nig-X-ku-Z-i-gub, which is to say, [sign] where in X, Z stands. A few examples will suffice to illustrate this process. (EFT), day, to express the idea of 'night', is called nig utia-ku-gig-gi-ga-igub CT. XII. 7 a, 28. (FFF) = gal, 'great', inserted into  $e\ddot{s}$  'house', to express the idea 'under-world' and 'great chamber's, called nig- $e\ddot{s}se$ -ku-galla-igub. (Really gud, ox, with inserted kur, 'mountain', gud gud 'mountain-ox, wild ox'. A considerable number of compounds are thus written, although strictly speaking the sign enclosed is a genitive.

Signs placed within signs.

- 1. But, cf. RTC. no. 5, obv. III, 2 f.; Gud Cyl. A 2, 8. 25. For the ancient sign add OBI. 94 to REC. 294.
- 2. The scribes regarded as the gunified form of , yet this is uncertain. Doubtful also is the explanation of , as the gunā of . In CT. V, 7 obv.
  - 3. The root  $sir = ar\bar{a}ku$  is certain.
- 4. A gunification, in which the interior strokes have become three heads, in B. M. 19984 obv. 8.
  - 5. parşu.

 $\forall \forall (eri)$ , 'water of the eye' is often written  $\forall \forall \vdash \forall = nig \ \bar{a}$ -ak-ku-igiigub, cf. K 2839, rev. II, 21. We therefore find compounds written both ways; thus in Gud. Cyl. A 13, 14 the word for a sacred person, devotee, usag, is written with FIII enclosed in FIII, but the word is spelled out \(\delta\)-sag-ga-ge in SBP. 300, 1'. The inventors of picture-writing by thus introducing a motif into a sign were able to express involved ideas. So for instance the sign for 'city wall', dûru, represented a huge gate flanked on each side by a short portion of the wall. Within this they introduced the sign for pitû, 'open', representing the notion of an entrance, REC. 370. The same motif is introduced into the sign for 'month' to denote the beginning of the month REC. 2372. The sign for water is also introduced into signs with ingenious results. >= III, 'to drink', = KA 'mouth' with A 'water', inserted. Cf. also ► Imp pisan, a water vessel. The method of modifying signs by other signs did not always follow a fixed rule; for example \* še, 'barley, grain', is inserted into the following signs; kum, perhaps originally the picture of an instrument for threshing grain; KEC. 213 and CT. XV 22, obv. 8. \* , originally written with se above, or enclosed in, the sign mušen, bird, hence 'a grain bird', usū.

Signs juxtaposed.

§ 22. More involved ideas were expressed by placing two signs together. For this combination the scribes employed the formula X-Z-ku. To represent the word for 'marsh' apparu, the Sumerians wrote - 'reed' and + 'water', which the grammarians explained as gi-a-a-ku, that is, the two sign-names were placed side by side and

then the suffix ku added. Three signs may be treated in the same way;  $= \iiint = \bigvee \longrightarrow \bigoplus = \mathring{u}-ki-i-i\mathring{s}kur-akku$ , pronounced kutra, a kind of plant. Yet the grammarians often omit the suffix ku;  $(\sqsubseteq) = \bigvee \longrightarrow \bigvee = ki-sag-aragubb\bar{u}^3$ . Not infrequently do we find this suffix appearing in loan-words which the Semites borrowed;  $a-\mathring{s}ur = a\mathring{s}urakku$ ; a-mar = amarukku. Yet the majority of compound loan-words do not have this suffix s.

Variable combinations.

- 1. The pronunciation was, however,  $gi-d\ddot{u}r$ , where  $d\ddot{u}r$  represents the word tul>dul, a swamp, lit. 'reedy swamp', K 4174, rev. 7.
  - 2. K 4174, obv. I, 9.
  - 3. Ibid., rev. 36.
- 5. e-gal = egallu: pur-gul = purkullu. The most important lists of loanwords are the two publications, Leander, Ueber die sumerischen Lehnwörter in assyrischen, and Langdon, Sumerian Loan-words, Babyloniaca, vol. II.
  - 6. For b) v. Gud. Cyl. B 18, 22.
- 7. The term ideogram implies much more than pictograph. Although the Sumerian script undoubtably consisted in mere pictographs in its primitive stages, yet the earliest literary remains have preserved almost negligible traces of these crude signs. As early as 4000 BC, the system had already succeeded in writing more composite ideas by means of modifying and combining signs.

of igi 'eye' and bar 'bright', i. e., igi-bar = naplusu, or as a noun bara 'seer', also appears as bar-igi in galubar- $igi = bara^{\dagger}$ .

Writing and pronunciation. § 24. The majority of words in Sumerian are expressed by means of these ingenious compounds. To understand an ideogram it is, therefore, not only necessary to know the phonetic pronunciation of the word which it represents, but also to comprehend the original motifs which enter into it. For example the ordinary ideogram for 'oven' is which enter into it. For example the ordinary ideogram for 'oven' is composed of ki(n) 'place' and izi 'fire', 'place for fire', but the word for 'oven' was pronounced abzal = maṣādu or ni-mur = tumru, or gun-ne = kinunu. ab-zal means 'blazing chamber', ni-mur, 'fire-furious', gun-ne, 'collection of coals'. An ingenious combination for writing the word to beget' is the gunified mušen = fish, (see above p. 21), or by inserting the sign for 'water' into the sign for 'heart', really composed of šag-a or a-šag, but pronounced peš.

Naturally the pronunciation more often corresponds to the writing as,  $\vdash \parallel \parallel \parallel \vdash e - gal = \text{house-great}; \parallel \vdash \parallel \parallel ur-maj = \text{dog-large}; \parallel \vdash \parallel \parallel me-lam = melammu.$ 

Rise of the phonetic system.

§ 25. The system, originally purely ideographic, had already partly passed into the syllabic stage before the period of the oldest inscriptions. The monosyllabic words became mere syllables. Since the roots are largely bi-consonantal a large number of syllables are bi-consonantal. Thus the sign \(\mathbb{E}\), ideograph for \(kalag\), 'strong man', readily yielded the syllable \(kal\) and since the noun \(kal\), derived from a root \(gil\), to demolish, meant 'demolition', the scribes wrote \(\mathbb{E}\) \(\mathbb{E}\) \(\mathbb{E}\), literally 'place demolished', for \(nid\)\(\pitut{t}u\), a plot with ruined house. We have here a purely phonetic process which can be understood only by the reduction of the language to its phonetic roots. In fact we shall find that the written system even from the beginning of our knowledge of the inscriptions is much more phonetic than has been supposed. The sign \(\mathbb{E}\)\), originally used for \(sag{g}\), 'head', came to mean \(sag{g}\), 'gift', a

nominal derivative of the verb sig, to give. In a large number of cases the final consonant was lost, thus giving rise to syllables with a consonant and vowel. If originally employed for sig, horn, became si. If gin, a reed, became gi. After this step had been taken it was possible to write the root sig, which had a large number of meanings, phonetically if gin if gin is gin if gin is gin if gin if

Original syllables without final consonant.

§ 27. The syllables  $\not\subseteq V$   $\check{sa}^2$ ,  $\not\sqsubseteq V$   $\check{su}$ , (from  $\check{su}\check{s}$ , to overwhelm),  $(V - \check{si}, \check{se})$ , were so used by the Babylonians of the classical period, the consonant corresponding to the Hebrew v. It has been generally assumed that Sumerian possessed a sound  $\check{s}$ . This applies also to the syllables  $i\check{s}$ ,  $a\check{s}$ ,  $u\check{s}$ ,  $e\check{s}$ . The Babylonian of the Code of Hammurabi clearly distinguishes two classes of sibilants is, us, as, si, sa, su and  $e\check{s}$ ,  $i\check{s}$ ,  $u\check{s}$ ,  $a\check{s}$ ,  $i\check{s}$ 

Sibilants.

<sup>1.</sup> Uncertain.

<sup>2.</sup> The value  $\check{s}\alpha$  of the sign  $\Psi$  is probably of Semitic origin, being the Semitic relative  $\check{s}\alpha$ , a translation of the Sumerian neuter relative nig (v. page 113). Errors have arisen by supposing  $\check{s}\alpha$  to be Sumerian; for example  $\Psi$ -gu-un-nu,  $\Psi$ -gu- $s\dot{a}$ , in V R. 42 e.f., 25 f., are to be transcribed as loan-words  $gargunn\bar{u}$ ,  $garguz[s\bar{u}]$ . Correct Brunnow, 12175 f.

borrowed.. The Semites of the period of Sarganišarri and Naram-Sin evidently had the primitive system of sibilants in which s corresponds to the later s. In these inscriptions the possessive 3d per. is written su, not  $\delta u$ , the shaphel appears with s, not  $\delta c$ .  $\delta ad\dot{u}$ , mountain, appears as sa-tu. We infer that between the period of Sarganišarri and Hammurabi the Akkadian sibilants suffered permutation, and that the syllables chosen to represent s in the earlier period must have been pronounced s by the Sumerians. We would expect on the other hand to find the syllables XII, I etc. employed by the early Semites for their s corresponding to s in the Code etc. But we find the verb šapāku, written -pu-uk, so also -vu-un, both pronounced  $i\check{s}puk$  (?) and *iškun* (?). The relative *ša* is written **\( \sum \)** [OBI. 120, III, 5.]. Although the word for 'mountain' is constantly written with s on the Obelisk of Maništusu, yet it is also written \( \sum\_{-at} \), face B, col. XII 3, XVIII 31. We have, then, the following difficult situation. It seems necessary to assume that the Semitic sibilants were in process of permutation when the Semites borrowed the signs. Some words had already changed  $s > \check{s}$ as in case of the verbs cited above. The suffixes are su, sunu, sa, sina. The nouns sumu, samsu, salim are frequent. On the other hand the verbs šapāku, šakānu, rašū, šemė are written as they would be in the We assume that all these verbs suffered permutation and were pronounced with s. We ought to find examples of [1], [1], etc. corresponding to s in the Code. No word has yet been found in this period philologically connected with a word containing s in later Babylonian. On the above assumption the sole example of an original š in the early period is the proper name Enbi-as-tar<sup>2</sup> [v. Bab. II, 138]. I conclude that Sumerian possessed a sound corresponding to the Semitic š but, beside the š in aš-tar, the only cases, where Sumerian syllables

See Hoshander, ZA. XX, 293.

<sup>2.</sup>  $a\ddot{s}$ -tar = Sabean 'Athtar occurs in both periods written (; no other writing occurs in these periods. If permutation occurred it was pronounced istar in the period of Hammurabi. In any case the early Semites must have pronounced a  $\ddot{s}$  here.

Emphatic letters.

§ 28. The syllables with the vowel before the consonant in most cases represent the original word. In other terms they are unchanged roots employed as phonetic values.  $\Rightarrow \uparrow ap$ , ab, ocean;  $\Rightarrow \uparrow ad$ , father, (also employed for at);  $\Rightarrow \uparrow aga$ , to do, to work,  $\Rightarrow ag$ , employed also for ak and ak.  $\Rightarrow \uparrow \downarrow \downarrow u f u$ , poison,  $\Rightarrow u g$ , employed also for ag and ig.

Origin of simple syllables beginning with a vowel.

- 1. The permutation of sibilants in Semitic does not apply to the sibilants in Sumerian. The point to be kept in mind is that, when the Semites changed  $s > \check{s}$ , they also changed the Sumerian signs. For example the suffix for his appears as  $(\check{s}u)$  in the early period, but  $(\check{s}u)$  or  $(\check{s}u)$  in the later period.
- 2. According to the grammarians  $k\alpha$  is composed of pap and ais, a

Vowel signs.

§ 29. The signs for the vowels were originally employed as pictographs, but, with one exception, they appear to have been pronounced as simple vowels from the beginning. The sign for  $e \ (\sqsubseteq | \searrow)$  had at first the value egi and meant  $canal^3$ .  $\bigvee a$ , water. Three signs were employed for u;  $\langle , u \rangle$ , ten;  $\sqsubseteq \bigvee | \sqsubseteq , u \rangle$ , may represent a net woven with large strands at right angles with the warp, but the original meaning of the sign with the value u cannot be determined. We have also to reckon with the possibility of its being a value obtained by the elision of a

<sup>1.</sup> In fact Sumerian does not seem to have developed a phonetic value id/t, employed as such.

<sup>2.</sup> This explanation is clearly to be preferred to the derivation of the values is and is for this sign from the Semitic equivalent is u.

<sup>3.</sup> The ancient sign may possibly represent a canal. Prince, Materials, 92, made the same suggestion.

> Practical hints.

§ 30. The language, evidently well equipped both for ideographic and phonetic expression, should, if clearly written, present no difficulty in conveying the ideas of those who wrote it. We have, however, to contend with peculiar obstacles, the most serious obstacle being the fact that the signs, which may have been used originally with a few fixed phonetic values, have in many cases borrowed homophonic values of widely different meanings. This confusion arose from the lack of diversified roots in the language. The root | sig has as many as ten different values1; theoretically all of these could be written with any sign which had the value sig regardless of its pictographic meaning. example the sign \( \sqrt{1}\) may possibly represent a hand with pointing front finger, hence sig 'horn', but the sign may be employed to write sig = be bright ( $nap\bar{a}hu$ ,  $nam\bar{a}ru$ ), sig = to rush, pierce, ( $nag\bar{a}su$ ,  $nak\bar{a}bu$ ), sig = to establish, (šuzzuzzu), sig = be weak, (enēšu), sig = seize (aħāzu),sig = be full (mali), sig = to oversee, counsel, (dabābu). In this case only sig, 'horn' and 'to rush, pierce', belong to this sign. On the other hand it would be possible to write all of these values phonetically, si-ig or si-gi. Confusion also arose through the elision of final consonants a process which resulted in a large number of homophones. For example A dug had the meaning 'good' (tâbu), which by elision became du, hence  $d\hat{u}$  ( $\rightarrow$ ) came to mean  $t\hat{a}bu$ ; also  $\rightarrow$ ordinary sign for the synonymn damku, came to have a value du [CT. XXIV, 6, 25).  $dig ( \vdash )$  has the meaning 'be full' (mali), which became  $d\bar{u}$  ( $) = mal\hat{u}$ ; ordinarily one would translate > by  $ban\hat{u}$ ,

<sup>1.</sup> The vowel  $\vec{u}$  written also with the signs containing i must be reckoned with here, so that an uncertain number of these syllables may have been pronounced süg, especially those which became sib or sim.

'to build'. The translator when dealing with a sign having the value du must, therefore, keep in mind a very large number of possibilities. The value might represent du + any one of twenty or more consonants. The form of the ancient pictograph helps one to select the most probable values, but at the same time the student must risk being very wide of the mark if he have no Semitic translation to control his text.

## CHAPTER III.

## The Phonetic Elements of Sumerian and Sound-Changes 1.

§ 31. The script evolved by the Sumerians has the capacity of writing but four vowel sounds, low back  $\bar{a}$ , high back  $\bar{u}$  with labial rounding, mid-palatal  $\bar{e}$  and front palatal  $\bar{z}$ . It is probable that, when a separate vowel sign was employed for any of these vowels,

Vowels.

1. The principal works upon this subject are, Lenormant, Etudes Accadiennes, seconde série, pp. 25-63; SAYCE, Accadian Phonology, Philological Society's Transactions, 1877-9, pp. 123-142; PAUL HAUPT, Akkadisch-Sumerische Keilschrist-Texte, p. 134 and numerous notes by the same author in other works; HOMMEL. Die Sumero-akkadische Sprache, Zeitschrift für Keilschriftforschung, I, 161-8; LEHMANN, Šamaš-šum-uktn, pp. 131-160; PRINCE, Materials for a Sumerian Lexicon, § IV; Fossey, Les Permutations des Consonnes en Sumérien, Hilprecht Anniversary Vol. 105-120, also Ball, ibid., 33-59. The student must be emphatically warned concerning a great deal that has been written upon sound-change in Sumerian. With sufficient ingenuity phoneticians have been able to prove sound-changes which are incorrect. Many signs have several sounds, due to synonymous roots only, as for instance = du and ru, synonymns for  $ban\dot{u}$ , to build; it is needless to assume a process d>r to explain this phenomenon. Occasionally scholars in ignorance of the forms of the signs in the early period and confused by the fact that some signs with different sounds and meanings have coalesced into a single sign, have attempted to explain the multiplicity of sounds attached to signs of this kind by sound-change. The sign - for example has two major values bar and + mas confused under one sign + in the later script. By assuming b > mand r > s we might arrive at the absurd result that bar = mas.  $\Rightarrow gan$  and kar, represents two signs and gan and kar; obviously any attempt to explain gan = kar by sound-change would be ridiculous. The scribes, themselves, are frequently to blame, since they occasionally attribute meanings to one Sumerian word which belong to another word simply because both Sumerian words happen to be written with the same sign.

GRAM. SUM.

the long vowel was intended. To express any of these sounds in combination with consonants separate syllabic signs had to be chosen. the case of signs representing closed syllables we presume that the vowel may be short or long as circumstance requires, e. g., ⊨\\\ \lambda \lambda \ilde{l} \lambda \ilde{l} \, \lambda \lambda \ilde{l} \ilde{l} \, \lambda \, \lambda \ilde{l} \ilde{l} \ilde{l} \, \lambda \, \lambda \ilde{l} \, \lambda \, \lambda \ilde{l} \ilde{l} \, \lambda \, \lambda \ilde{l} \, \lambda \ilde{l} \, \lambda \, \lambda \ilde{l} \, \lambda \, \lambda \ilde{l} \, \lambda \ilde{l} \, \lambda \, \lambda \ilde lāg or līg, läg. The quality of the short vowels as well as that of the long vowels must have varied somewhat according to the consonants with which they were used 1. The imperfect system of writing furnishes absolutely no means of determining whether the short vowels differed materially in quality from the long vowels; scholars are in the habit of pronouncing the short vowels according to the quality of the corresponding Greek short vowels, that is, with a difference chiefly in quantity. Long vowels are frequently indicated by the addition of the vowel sign, e. g., sa-a indicates that the vowel of the syllable sa is long. It is, however, customary to regard all open syllables as long even without the addition of the vowel sign. The length of the vowel in closed syllables, ab, ad, ug, mug, etc., is difficult to determine; when followed by a syllable beginning with a consonant, as ab-kal, the vowels of such syllables naturally become short.

Vowel a.

§ 32. The sign  $\bigvee$  is generally employed for  $\bar{a}$  the lower velar long vowel. Another sign  $\bigvee$  had the same phonetic value, usually distinguished as  $\dot{a}$ , and appears frequently as a variant of  $\bigvee$ . Only the sign  $\bigvee$  is written for indicating long vowels,  $\delta a$ -a, na-a, etc. <sup>2</sup>

Vowel u.

§ 33. The system possesses three vowels for the high back velar  $\bar{u}$ , viz. (I)  $\dot{u}$ , (u and  $\dot{v}$ )  $\dot{u}$ . Inasmuch as the Semites generally wrote their copula  $\bar{u}$  (v) with the sign (I)  $\dot{v}$ ), its phonetic quality is unmistakably fixed. It is the sign usually employed for the nominal augment  $\bar{u}$ , e. g.,  $\dot{u}$ -tud 'begetting', from the root tud 'to beget'. It appears as a phonetic element in words, as  $\dot{u}$ -mu-un 'lord', written also u-mu-un, but rarely as a vowel prolongation as in  $d\bar{u}$ - $\dot{u}$ -de, IV R. 35, no. 6, II 5. The verbal prefix  $\dot{u}$  by means of which many com-

pound verbs were formed, is generally written  $\{ \neg \downarrow \sqsubseteq \downarrow \mid , \ r$ et the form  $r = \downarrow \downarrow \downarrow \mid \equiv r$  appears in these constructions as well as in the nouns formed with the augment  $\tilde{u}$ , cf.  $\tilde{u}$ - $k\tilde{u}r = m\tilde{u}kalu$  food, and for the prefix in compound verbs Babyloniaca, II, 84 f.  $\{ and r \mid \downarrow \downarrow \mid \equiv are$  the forms which regularly appear as the vowel prolongation du-u<sup>1</sup>, tu-u<sup>2</sup>, in the syllabars, yet for  $\tilde{u}$  cf., ga-mu- $\tilde{u}$ - $\tilde{s}ub$ <sup>3</sup>, mu- $\tilde{u}$ -da-zu<sup>4</sup> in classical texts.

It seems improbable that the language should have evolved three signs for u all having the same quality; we should have expected a middle back vowel  $\bar{o}$  and perhaps a labialised  $\bar{i}$ , i. e.,  $\bar{u}$  the so-called umlauted u, Greek and French u. The principal proof which can be given for  $\bar{u}$  is the fact that the direct case ending i > e appears in certain cases as u, notably in the pronouns mu and zu, but in these cases the u may be due to the labial m (me > mu) which influenced ze to zu by analogy. So also in dumu. But of galu, lugalu, and for zu, zi and si in dialectic texts. If in fact the language possessed the value  $\ddot{u}$ , it is no longer possible to say whether any one of these three signs possessed this value. For the probable existence of  $\bar{o}$  written with the  $\bar{a}$  vowel and  $\ddot{u}$  written with the  $\bar{a}$  vowel see below under Labialisation.

§ 34. The signs  $\models \models$  and  $\models \mid \bigvee$  are invariably used to denote the vowels  $\bar{\imath}$  and  $\bar{e}$ ; a tendency to reduce  $\bar{\imath}$  ( $\bar{\imath}$ ) to  $\bar{e}$  ( $\bar{e}$ ) is characteristic of Sumerian. In fact all the syllables open or closed possessing the vowel i ( $\bar{\imath}$ ) could be pronounced with  $\bar{e}$  ( $\bar{e}$ ) ad libitum. For example the syllable  $k\bar{\imath}$  in the combination ki-el, was pronounced  $k\bar{e}$  and the whole word  $k\bar{e}l$ , a closed syllable with long vowel  $\bar{e}l$ .

See also under Pronowns pp. 102 f.

Glides.

§ 35. Phasmuch as the system possessed no signs for the laryngal explosive (x) and the laryngal voiceless spirant h(n), we must assume that the Sumerians pronounced their vowels with the smooth on and offglides. It is necessary, however, to speak with reserve on this point as well as on many others where ignorance is forced upon us by the meager nature of the written characters.

Semivowels.

§ 36. No separate signs exist for the semivowels i and  $u^1$ , and hence the diphthongs ai, ia, au and ua were written a-i, i-a, a-u, u-a; cf. ua, SBP. 270, 28, the ordinary exclamation for 'woe!' pronounced ua. au in a ba - u.

Notice that the script for a and i could be pronounced also  $\bar{o}$  and  $\ddot{u}$  an inconsistency due to the poverty of characters for expressing sounds. The method of indicating  $\ddot{o}$  by a-e and  $\ddot{u}$  by u-e is apparently a late invention, not employed before the dynasty of Ur. In the early system  $\ddot{u}$ ,  $\ddot{o}$ ,  $\ddot{e}$ ,  $\ddot{e}$ ,  $\ddot{v}$ ,  $\ddot{o}$  together with their short sounds had to be written with

me-a for ma-e. mu-lu-e =  $mul\ddot{u}$ , Sm. 954 obv. 9;  $\dot{g}u$ -e =  $g\ddot{u}$ , IV R. 14, no. 4, l. 15 [Hommel, ZK. I, 167]. A clear case of  $\ddot{u}$  for t is mu-e-ri =  $m\ddot{u}ri$  for mir = issu in Radau, Ninib, p. 50, l. 51.  $\dot{u}$ -mu-e-gul =  $um\ddot{u}gul$  SBP. 282, 26.

only four vowel signs. Of these a stood for  $\bar{a}$ ,  $\bar{a}$ ,  $\bar{o}$ ,  $\bar{o}$ ; i for  $\bar{i}$ ,  $\bar{a}$ ,  $\bar{u}$ . It seems that the scribes had no special means of writing  $\bar{o}$  until they ingeniously hit upon using e to umlaut vowels.

§ 38. The consonants, so far as we are now able to determine their qualities and places of articulation, are the following:

Consonants.

- 1. Velars: the back explosive surd k (q) and the front explosive surd k; the corresponding sonant explosive g must have been articulated well towards the palate in most cases. The language certainly possessed a spirant sonant velar  $\mathring{g}^1$ , which when reduced becomes g, cf. I la $\mathring{g}$  also with value lag, f  $\mathring{g}$   $\mathring{g}$
- - 3. Dentals: the voiced and voiceless explosives d and t; a spirant

<sup>1.</sup> Arabic ;, rare in Indo-Germanic languages, v. Sievers, 344.

<sup>2.</sup> Rm. 2588, l. 44 and cf. Meissner, SAI. 2864.

<sup>3.</sup> The first to make a clear statement on this point was RANKE, Personal Names, p. 12; a more detailed note by Poebel, p. 3, and later by RADAU, l. c.

interdental  $\P$ , if it existed at all, must have appeared in writing as t, since no special set of signs appear to have been reserved for combinations containing this sound.

- 4. Labials: The voiced and voiceless explosives b and p, perhaps also the labial spirant w, which curiously enough appears to have been written with signs ordinarily reserved for syllables containing p, viz. (x, y)and . The only proof which can be adduced for the existence of the w in Sumerian is the fact that both these signs ( $^{\wedge}$ ) at least) were employed by the Semites for the syllables wa, we. The choice of syllables containing p to express the sound w leads to the inference that this w of Sumerian was not voiced, but corresponded closely to the sound wh in English when  $^{2}$ . The sonant w was apparently also written with signs containing m. m =sonant w in Sumerian is based upon two arguments, a) the Semites also employed m for their labial sonant w, and b) m frequently interchanges with  $\tilde{n}$ , a nasalized i, as in dingir = dimmer, i.e.  $di\tilde{n}ir >$ diwer. See Lenormant, Etudes Accadiennes, seconde Série, p. 26. The  $labio-dental\ spirants\ v$  (sonant) and f (surd) cannot be proven. they existed at all, we suppose that they must have been written with signs containing b and p respectively.
- 5. Sibilants: The language clearly possessed the two front dorsal sibilants s and  $\check{s}$  concerning the articulation of which we have only the evidence of Semitic usage, the s corresponding to samek and the  $\check{s}$  to  $\check{s}in$ . Of the corresponding sonants z and  $\check{z}$  (Arabic ) only z is fully certified. If  $\check{z}$  existed at all, it must have been expressed in those syllables which contained z. We might infer the existence of  $\check{z}$  from the sound-change  $z > \check{s}$  in  $zi > \check{s}i$ , the late word for  $napi\check{s}tu$ , breath of life; it is difficult to account for the change here unless we assume the value  $\check{z}i$  instead of z; changes such as  $u\check{s}u > uzu^3$  also favour the supposition of a sound  $\check{z}$ .
  - 6. The sounds l and r, or the lateral and coronal liquids. The

<sup>3.</sup> In the word for sunset erib šamši (

frequent interchange of r and  $\delta$  excludes the species of r known as the guttural r closely allied to  $\delta$ , and points to an alveolar r which is articulated in much the same position as  $\delta^1$ . The interchange of l and r indicates a *cerebral* r and l, but it would be rash to postulate this sound of r and l as the ordinary pronunciation l.

More frequent is the nasalized  $l^s$  interchanging with n as in til > tin, dul > dun or the reverse process in dun > dul. [Lehmann, p. 150.]

7. Nasals: labial m, dental n, palatal  $\tilde{n}$ , velar ng. The latter sound in forms like dungi, dunga (CT.XXV, 48, 10). inga occurs frequently in verb-forms, for an earlier imma. The most plausible explanation would be to assume a palatalised nasal  $\tilde{n}$  after the palatal vowels i and e. Jensen has already proposed this explanation for ki-bi-gar-ra = ki-bi-in-gar-ra, where g is palatalised after i, pronounced  $kibi\tilde{n}arra$ ; the same process has occurred in e-gar = ingar (= igaru), pronounced  $i\tilde{n}ar$ , as well as in the word for 'farmer', ikkaru, from ikkar  $< \bar{i}kar$ , which in dialectic Sumerian became  $i\tilde{n}ar$  written engar.

According to V R. 11 c 20, the sign A had the value engad, which evidently has proceeded from  $\bar{a}gad$ , aggad, since the classical value is aka > aga with elided d; when, however, the root  $\bar{a}gad$  was prefixed by the element ki containing the palatal vowel  $\bar{\imath}$  the whole became kengad pronounced  $ke\bar{n}ad$ .

The velar nasal ng is apparently certain in engima ( $-\iiint$ ) and nanga ( $\bigvee$ ). The palatal  $\tilde{n}$  after i and e offers the only reasonable explanation for the process mm > ng after i. The dialectic dimmer for digir e e dingir e dingin e e dingin e dingin e e dingin e e dingin e e

reverse process. It will be seen, therefore, that palatal  $\tilde{n}$ , always written ng, on the one hand became labial m, on the other hand it represents the end of a species of palatalisation of gutturals  $g > \tilde{n}$  or  $k > \tilde{n}$ .

It seems that Haupt first discovered the change  $n > \check{s}$ , see ibid. p. 103.]

Perhaps also in kigal = vwhere the g may have suffered complete palatalisation and then disappeared, yet this explanation must be considered doubtful since no Babylonian form še' ālu \* has been found.
- c) Velars to palatal nasal';  $g > ng(\tilde{n}) : egar > ingar; digir >$ dingir. The process  $g > \tilde{n} > m$  is carried through in digir > din $gir > dimmer \text{ and in } kanaga > kanaña^* > kanama^* > kalama.$
- d) mm > ng ( $\tilde{n}$ ) only in verbal prefixes after vowel  $\tilde{i}$ , immasir > 1inga-sir, see above under nasals. [Pronounced perhaps  $iwwasir > i\tilde{n}asir$ ?]

In Sumerian, however, the process g > m and g > b

- 1. Cf. Brunnow, 4633 with 7486, also Jensen and Hommel, ZK. II 103, and LEHMANN, 148 f.
- 2. Thureau-Dangin, RA. VII, 107 infers the aspirated sound of d after the vowel but aspiration in Sumerian is questionable. The example šā-tūr> sasurru, [Br. 8010 and Del., H. W., 677 b] cited by the same scholar is a change due to Semitic influence, since the correct loan-word šaturru Del. ibid., 696 b, and LEANDER, no. 225, shews that the word was correctly pronounced by the Sumerians.
- 3. Lehmann and Hommel, ZK. II, 99-102 have explained the value ku [[E]] as classical for šú also written but not only is šú the earliest and only pronunciation for the postfix but the two values belong to originally different signs and E. I imagine that both of these scholars have abandoned this explanation.

occurs before and after all of the vowels, so that it is difficult to resist the inference either that the glide  $\mu$  developed between the consonant and vowel in certain cases', or that the script for a and i really indicated the sounds o and  $\ddot{u}$  in these cases.

- a) Velar g > m (w) before  $\bar{u}$ . gur > mur for the sign  $A \not\models \vdots$  : gun > mun = biltu, written  $A \not\models \vdots$  (gui-un) and  $A \not\Leftrightarrow \models \vdots$  mu-un.
- b) g > m (w) before i; gir > mir, mer, often in  $g\check{r} = \check{s}\acute{e}pu$  'foot' and  $me-ri = \check{s}\acute{e}pu$ ; gir > mir = izzu (often me-ir), see the sign with Brünnow.  $gi\check{s} > mi\check{s} > me\check{s} = idlu$ , thence (through influence of the labial)  $mu\check{s}$ . gin > men, both values for the sign .
- d) g > b after i; sig > siba = šaplu, Gudea, Cyl. A, 4, 18; sig > še-ib = libittu 'brick'; sig > sib = ellu.
- e) g > m (w) after i; sig > sim > zem = nadānu, also sum by influence of the labial.  $en-g\dot{e}-g\dot{i} > engima$ , CT. XII, 49, 10. After a;  $kanag > kalam = m\bar{a}tu^{3}$ .
- f) g > b after a; &ag > &ab, 'heart';  $tag > tab = sap \ anu$ ; aga > aba = arkatu. Also &gap > b in ta&gap > tab = e&gap a 'to increase'.
- g) g > b after u; tug > tub = nahu;  $sug^* > sub$  ( $\{ \{ \} \} \}$ ), general sense of 'be bright', from root sig > sig; dug > zeb = birku, 'knee'.

The sound change in d, e, f, may be due to the influence of a final vowel which in most instances has been lost.  $\check{s}ag > \check{s}ab$  could not have been carried through unless the original form had been  $\check{s}aga$ ,  $\check{s}agi$  or  $\check{s}ag\ddot{u}(?)$ . In the case of  $\check{s}aga$  and  $\check{s}agi$  we must assume  $\check{s}agu_a$ -a,  $\check{s}agu_a$ -i. If we assume in these cases for

<sup>\*1.</sup> See Brockelmann, Vergleichende Grammatik, p. 208, § 80. This assumption would be necessary in the case of the vowels i and a, e. g., gi pronounced gu-i8, gal pronounced gu-a1. On the other assumption these words would be pronounced gu8, go1.

the vowel  $\bar{a}$  a pronunciation  $\bar{o}$  and for  $\bar{t}$  the sound  $\bar{u}$ , the difficulties would disappear, since all of the vowels would then be rounded. We have already seen that a-e probably represents umlauted  $\bar{e} = \ddot{o}$ , hence it may not be at all improbable that in lack of a sign for  $\bar{o}$  the scribes wrote  $\bar{a}$  and for  $\bar{u}$  they employed  $\bar{t}$  as well as  $u \cdot e^{4}$ .

§ 56. The principle of vowel harmony, which plays an important part in the phonology of Sumerian, was discovered by the founders of the science, SAYCE, AMIAUD, HOMMEL, LENORMANT, HAUPT, and has been recognized by all competent phonologists who

have written upon the subject, most recently Prince, Materials, p. xv. The following list though not exhaustive contains the most important examples.  $e\check{s}bar > a\check{s}bar = purussu$ .  $e\check{s}eman > e\check{s}emen = melultu$  and kippu, 'chamber of joy'. egar > amar = lânu, VR. 11 d, 50. anigin > enigin, II R. 29 a, 29 = CT. Harmony in noun forms. § 57. Following the tendency to reduce all the vowels of a word to the same sound, the language possesses a number of words formed on this principle, e.g., dagal, 'wide', ama 'mother', dumu, 'son', babbar, 'sun', murub, 'centre', nagar, 'earpenter', urudu, 'copper', lagar, 'psalmist', alal, pail, etc., etc.

The effort to bring about vowel harmony in the prefixes of verbs is evident at all stages of the language. mu-un-du-tur-tur-ne (du for da), IV R. 15\* b, 62.  $gu-mu-na-d\bar{u}$  and ge-im-mi-gt in the same construction, CT. I, 46, 1 f. gu-mu-gul-li-en, CT. I, 46, 14.

- The principle of harmony is carried so far that case endings are assimilated to the vowel of the root, e. g., mupadda intuk, 'he has a name', where we expect mupadde.

§ 61. The script does not enable one to determine whether the language possessed syllables beginning with two consonants; it is consequently impossible to detect the existence of affricatives as ts, pf, or aspirates as ph, kh, etc.

Affricatives.

The disappearing consonant is often replaced by a vowel, thus nad 'bed', appears as  $n\dot{a}$ -a, kur' to eat', as  $k\dot{u}-a'$ ,  $du\dot{g}$ , 'to ransom', as  $d\ddot{u}-a''$ ,  $darig > da-ri-a = sab\bar{a}ru$ , 'to seize, take', often in  $ma\ddot{s}$ -da-ri-a, 'property''. The root  $dem = \ddot{s}as\dot{u}$  is constantly written de-a in the compound  $g\dot{u}-de-a$ .  $di-e=\check{s}ak\check{u}$ ,  $tab\bar{a}ku$ , šapāku, 'to pour out', for dib connected with dub.

which had suffered phonetic decay by the term eme-sal or 'woman's tongue'.  $s\dot{a}$ -gar =  $m\ddot{a}liku$ , and  $s\dot{a}$ -mar =  $m\ddot{a}liku$  (eme-sal)'.  $gi\ddot{s}$  =  $rab\dot{u}$  and  $mu(\breve{s})$  =  $rab\dot{u}$  (eme-sal)'. The scribes thus indicate the forms with m for earlier g as eme-sal forms. labar for lagar =  $kal\dot{u}$ , 'psalmist', is called an eme-sal form'. The change igi > ide = bunu is called eme-sal'. In fact the grammarians drew up syllabars in which the earlier and later forms were placed side by side. Thus K 4319+4604', obv., col. II, 23-7:—

EME-SAL	EME-KU	SEMITIC —
a-da-ar	a– $g$ á $r$	ugaru, 'field'.
a- $ba$	a- $ga$	arkatu, 'the future'.
a-še-ir	a-nir	ittu, 'wailing' (?).
ir ba-an-zi-em	ir ba-an-tum	bikitum iškun, 'he instituted wailing'.

Assyriologists have generally inferred that the expression  $eme-KU^{\mathfrak{a}}$ , which the scribes translated by lišan  $šum\bar{e}ri$ , indicates the classical or original idiom in distinction from the decayed forms eme-sal. I have, following this accepted interpretation, placed the term eme-KU over the column containing the original words. Yet we cannot regard this interpretation as final, for eme-sal isoquite as much a lišan  $šum\bar{e}ri$  'Sumerian language', as the classical forms. As a matter of fact eme-KU has not been found in any connection where it is clearly contrasted whith eme-sal, and it may be that the term was not employed in the sense of 'classical tongue'.

The term *eme-sal* seems to have been applied not only to forms which had suffered phonetic decay but also to words which had come to be employed with extraordinary meanings. For example tur = sabru, CT. XIX 18 rev. 20, is accompanied by the *eme-sal* equivalent gi(n) = sabru, 'child', a colloquial use of the root gin, to beget.

The sound-changes discussed in this chapter can all be exemplified in the classical inscriptions from Urukagina onward and decayed forms occur side by side with original forms in all parts of Sumer, so that the so called *eme-sal* cannot denote a local dialect as has been presumed by those scholars who first observed these phonetic variants.

eme-si-di, and eme-gal. An interpretation of these terms which, with the exception of eme-sal occur only here, must be conjectural. eme-gtid =  $li\check{s}anu\ \bar{e}l\mathring{u}$ , 'lofty speech'; eme-mů $\check{s}=li\check{s}an\ stmi$ , 'speech of adornment'; eme-si-di =  $li\check{s}an\ m\check{e}\check{s}ari$ , 'correct speech'; eme-gal =  $li\check{s}anu\ rab\mathring{u}$ , 'great speech'. Concerning eme-TE-NAD we have not the slightest basis for conjecture.

## CHAPTER IV.

## The Determinatives 1.

Principle of determinatives.

§ 64. Although Sumerian makes little attempt to distinguish the genders and there are no orders of declensions whatsoever, yet it possesses a thorough system of determinatives by means of which whole groups of words are classified. The principle of classification is strictly materialistic, a word being determined by the general name of the natural group to which it belongs. Thus an object made of leather would be preceded by the word for leather su as suesir=senu, 'sandal, shoe'. Names of different kinds of fishes and birds are preceded or (in these two cases) more often followed by the words for fish (ga) and bird (mušen). unagga (mušen) = aribu, 'raven'. uz-tur-(mušen) = paspasu, tu (mušen) = summatu, 'dove'. sur-dū-(mušen),=surdū, 'falcon'. NUN-(ĝa)  $= agargar\bar{u}$ , a salt water fish<sup>3</sup>.  $\hat{g}a$  precedes its word in  $\hat{g}a_{nam}$ , Nikolski, 270 obv., col. III. On the botanical side the grammarians recognize but two great groups, the woody exogenous group and the vegetable endogenous group; the former is determined by the word for wood giš and the latter by the word for plant  $\acute{u}$  (šammu). On the zoölogical side, beside the great divisions of birds, fishes, and serpents (muš), the Sumerians attempted a more minute classification of insects. principle of classification was not strictly scientific; we have here three great orders:

<sup>1.</sup> An antiquated discussion of determinatives by Lenormant, Études, 2nd Série, p. 43 f.

<sup>2.</sup> This loan-word tends to prove that the postfix was not pronounced here. See Gud., Cyl. A 29, 10, where the determined noun for dove is inflected tu[mušen]-e.

<sup>3.</sup> Pinches, Amherst, 4, V 4. VII 1.

- 1. K mušen-pir and its gunified form K mušen-pir and its gunified form K mušen-pir and its gunified form K mušen-pir and its gunified form. The Semitic translation of this word is āribu, ēribu, the Hebrew [7], a species of locust. I take it that the hard-shelled winged insects (coleoptera) are all included under these two determinatives, the gunified form being used for the large varieties as the locust, cricket, grass-hopper'. Here belong all the varieties of beetles. It would be difficult to exclude from this order four-winged flies, as the dragon fly, at least those of the larger size, since the sign K actually means 'bird group of four's.
- 2. The large order of flies is determined by \[ num = zumbu. \]
  It may well be that the principle of classification is two wings. Here were placed the various orders of bees.
- 3. All poisonous insects including the most diverse orders are classified as \( \begin{align\*} \
- § 65. The determinatives for gender are nitag 'male' and sal 'female'. It is the rule to place the masculine determinative after a word and the feminine before it. Thus in BM. 19055 we find sil-(nitag)=puhādu, 'male lamb', but salsil=puhattu, 'female lamb'. Yet we find the masculine determinative before its word as in 3 nitag anšu dun-gi mu 4, 'three male mules four years old', Nik. 198. obv. I, 1. sal follows invariably in the expression for daughter dumusal=martu; cf. also sag-nitag, sag-sal, 'male and female slave', Nik. 174, rev. I, and passim's.

§ 66. A difficult problem arises as to whether these determinatives, which were borrowed by the Semites, were really pronounced. In

certain cases where the word was so well known that a determinative was unnecessary as in dingirentil, it is conceivable that dingir did not figure in the pronunciation. In such instances as našru (iṣṣuru), 'eagle', invariably written with the Sumerian  $\dot{a}$ -mušen, it is conceivable that neither iṣṣuru was pronounced in Semitic nor mušen in Sumerian. Yet it is inconceivable that the Sumerians should have neglected the pronunciation of the determinatives, which formed one of the few precautions against unlimited confusion. For example the word kan ( $\blacktriangleright$ ), when determined by the word giš (wood), becomes giškan = bukanu and sikkuru, 'a bolt or bar', but when determined by duk (vessel, jar), we have duk-kan = dikaru, 'jar', and also the loan-word tukkanu, tukanu. Not only does the loan-word shew that the Sumerians pronounced this determinative', but evidently great confusion would arise by its omission. Occasionally glosses indicate that the determinative is to be pronounced, as in  $\blacktriangleright$  gi-iš ku-u-ru  $\blacktriangleright$  = kuddu, K. 4403 obv. 15.

List of determinatives. § 67. The determinatives, in the order of the modern system of arranging the signs, are as follows. Unless especially noted the determinatives are supposed to be prefixed.

Other examples are  $g^{i\check{s}}gar=i\check{s}karu$ , wagon;  $g^{i\check{s}}gir=gi\check{s}girru$ , sword (K. 4408 rev. 24);  $g^{i\check{s}}ar=gu\check{s}uru$ , beam, (notice the vowel harmony);  $g^{i\check{s}}kal=gi\check{s}kallu$ , scepter;  $gi\check{s}ha\check{s}u$  (K. 2042 obv. 10).
- 3. Assyriologists generally employ the construct for such words as mašak, šipat, but ilu, isu, etc., which is inconsistent. I do not believe that the Semites intended the construct, although it is conceivable that with dropping of the final vowel u the forms became identical with the construct. Sumerian did not consider the determinative as a construct for the inflection ge never occurs in these combinations. Yet in favour of this reading in Semitic are forms like  $g^i dup = kanduppi$ , stylus, and see especially CT-XIV 49, B. M. 93086, where the determ. gi is translated by kan in several ideograms. On the other hand we have  $g^i nigsurra = ka-nu-u kuninnata$ , a kind of wicker basket, CT. XIV 47 b 14, where the construct is clearly impossible. Also  $g^{is}gig = issi sallum$ , II R. 45, 57, indicates the absolute form.

  - $\Rightarrow$  sil = sulū, 'street', as determ. only in SBH. 142 rev., col. III.
- FIT eri, uru, 'city'. eri appears in this construction first in the Semitic inscriptions and does not figure as a determinative in Sumerian; cf. for example NUN-(ki) = Eridu, Gud. B 4, 8, with eriNUN-(ki), Hammurabi Code, I, 64. The Semites generally accepted the Sumerian spelling for the cities whose names had already become famous as ká-dingir-ra-(ki) for Babylon, ud-kib-nun-(ki) for Sippar, but in those cases where they themselves were the first to put the name of cities into writing they employed the determ. eri, as eriharranu, i. e., aluHarranu, etc'.
- iti, 'month', iti-šeķin-tar=Adar; itiezen-d. bau, month of the festival of Bau, eighth month, etc.

I take it that the gunified form was used for the larger kinds of insects. Both signs are, however, translated by  $\bar{a}ribu > \bar{e}ribu$ , the general word for 'locust', and both occur as determinative of the same words, cf. Rm. 2, 202 with K. 4373 obv. I, 7-16° where nam-ptr and mušen-pir are employed indifferently. Both are written before the determined word.  $mu\check{s}en-pir$ nar-a=zibu, 'beetle' ('), classified

salve'. As a product of plants it is distinguished from  $\dot{u}=\check{s}a\hat{m}mu$ , the latter being a drug; the two are employed in the same list K. 4586. Used with  $gi\check{s}$ ,  $\check{s}im$  indicates a tree which produces resin, etc., as  $gi\check{s}-\check{s}im-li=bur\check{a}\check{s}u$ , resinous cypress, see Rm. 367. On  $\check{s}\check{t}m$ , see OLZ. 1909, 112.

EYA duk, 'jar, vessel'. Never applied to very small receptacles as cups, saucers, etc. [The latter were determined only by the material in their composition, as clay, bronze, copper.] dukalal = alallu, 'a pail'.  $dukga = karpat \, \check{s}izbi$ , 'milk bowl'.  $duk\check{s}ig = \check{s}ik\check{k}u$  'ointment bottle'.

FIME  $\dot{u}=\check{s}ammu$ , 'vegetable', designates almost endless varieties of herbs, plants etc. of all botanical species. The term is used technically in medicine for 'drug', and generally for products of herbs, and is even translated in one instance by rukku, 'cosmetic', IV R. 10 b 29°. In cases where the natives were in doubt as to whether a plant belonged to the exogenous and woody class or to the endogenous and vegetable class, they placed both  $gi\check{s}$  and u before the word as  $gi\check{s}-ugir$ , 'a thorn', CT. The value šam is ordinarily derived from šammu, which is supposed to be Semitic, cf. Ar. , 'to poison', and Assyr. šammu = drug, poison.

dak, dag, 'stone'; nà, 'carved stone'; zá, 'jewel'. The pronunciation of this determinative depends upon the kind and quality of stone intended. It is customary to read dag everywhere, but the loan-word laza-dim-ma=sadimmu, 'jeweler', indicates clearly enough the pronunciation when a jewel is intended. The sign also determines articles made of stone'.

 $dag_{e\check{s}i} = us\bar{u}$ , 'diorite'.  $dag_{izi} = aban$  iš $\bar{a}ti$ , 'fire stone'.  $dag_{zagin} = ukn\bar{u}$ , 'lapis lazuli'.  $z\dot{a}_{zagin} - sig = sibru$ , an article of lapis lazuli for apparel<sup>2</sup>.

FITTY e, 'house'; a determ. before the pr. names of temples, and for every conceivable form of building, such as store-houses, ritual huts, etc. It is customary to pronounce the e before all the words which it determines, as e-babbar-ra, temple of Šamaš, e-ur-imin-an-ki, temple of Nebo. e-MU, 'bakery'. e-gud, 'barn for oxen'. e is also employed in a more subtle sense in e-mar-uru = ispatu, quiver, 'abode of the shafts', v. ZA. 1907, 451.

fessions. lasu-tag-tag=epiš  $iptek\bar{a}$ , a kind of leather manufacturer. lasim, pastry maker. lasim, pastry maker. lasim, a kind of confectioner (passim). laurud-nagar=gurgurru, a smithy. The Sumerian gentilic is expressed by this determinative. laen-lil-(ki), a man of Nippur.

Let u g u = kalmat u 'poisonous insect', pur s u u, 'flee'. u g t u b b a = kalmat s u b a t i, moth. u g g a = a s a s u, a small poisonous fish. The original sign REC. 210 apparently represents an eight-legged insect, probably a spider u b l u, n a b u. The sign is closely related to g i r = s corpion, REC. 4, which also has eight legs<sup>3</sup>. The principal lists are K. 71, rev. 21-44 (CT. XIV 2); K. 4330, rev. 20 ff. (CT. XIV, 8).

numurmag = zumbi nêši, 'lion-fly''. Notice that K. 71 A rev. a discusses flies (lines 1-14) apart from bees (17-42). The original sign num [REC. 165] represents a two-winged insect. The principal lists are CT. XIV 2 a; 8 b 9-19; K. 4373 rev. 10-20 (CT. XIV 9); II R. 246, no. 1, rev. 16 f. num represents an order often confused with the higher winged orders on the one hand and the lower wingless orders on the other. Notice in CT. XIV 8, that num lies between the beetles (mušen-pir) and the vermin (uģu) and that the fly (lallartum), classified as a num K. 71, A rev. a 23, appears as a mušen-pir, b 16. The feminine lulilitum, a 37, is a num, but the masculine kulilu is a mušen-pir, b 5. On the other hand the kalmat šamši is placed under num, a 39.

ki(n), 'place', suffixed for names of cities and localities of all kinds.  $\check{sir}$ -bur-la-(ki) = Lagash. uri-(ki) = Ur.  $k\acute{a}$ -dingir-ra-(ki) = Babylon. Forms like unug-(ki)-ga = Erech, prove that the ki is only graphic in such cases and possibly in all cases where the name was well known. ki is prefixed in ki-en-gi and ki-uri², "Sumer and Akkad", (SAK. 204, no. 3, I 11 etc), as well as in ki-uri-(ki)-ma (SAK. 210, d 26). ki, prefixed, was pronounced and had a larger signification than the suffixed ki, the notion then being 'territory'. In the late inscriptions Akkad appears as uri(ki)³. The original writing a-ga-de-(ki), which denoted the city Akkad, seems to have been distinguished from ki-uri, the province of Akkad.

Strictly speaking ki cannot be employed after the names of provinces and countries without the help of prefixed kur, 'land, mountain'. In fact ki occurs after the names of countries ordinarily when the country has been named after its principal city. For example we find the land of Magan, Meluhha etc. constantly mentioned in the early inscriptions in the form kurma-gan-(ki), kurme-lug-ga-(ki); without kur the city Magan and Meluhha would be intended. nim-(ki) means most certainly the city Elam to be distinguished from kurnim-(ki), the land

of Elam. The usage is best illustrated by the writing for Amoria,  $karmar-tu^4$ , land of Amoria;  $jarsag\ mar-tu$ , mountain of Amoria. Notice the date formulae of Sarganšarri<sup>3</sup>, which have mar-tu but  $gu-ti-um-(ki)^4$ . The Sumerians evidently regarded the suffix ki as a locative of vague import. Originally the sign conveyed the notion of a limited locality, designating the word as a place-name simply; in practice ki would ordinarily indicate a city <sup>5</sup>.

 $\star k\dot{u}r$ , 'land, mountain', prefixed to all names of foreign or non-Sumerian lands and mountains. The sign is a picture of a range of hills. The Semites employed the determinative for lands and mountains of their own empire as well as for foreign lands.  $k\dot{u}rnim-ma-(ki)$  = Elam; etc.

determinative may convey only the general notion of cloth often without regard to the material; consequently we find expressions like tig kadlal, a garment made of linen  $(kit\bar{u})$ , DP. 73, obv. I, tigsig = sissiktu, a kind of cape made of wool, VR. 15 a 24. Woollen garments are, however, ordinarily distinguished from the tig class by means of the sign sig = sipatu 'wool'. It may well be that tig in its stricter sense, refers to cloths made of fibrous material such as flax, hemp, straws of various kinds. The original sign REC. 468 should, after the analogy of LEXLE, sig 'a comb, carding machine for wool', represent some kind

<sup>1.</sup> SAK. 210.

<sup>2.</sup> Ibid., 70.

<sup>3.</sup> Ibid., 225.

<sup>4.</sup> This principle is not violated by such examples as kagalad-(ki) farsag ki-mas-ka, Kagalad, mountain of Kimaš, where farsag is suffixed.

<sup>5.</sup> For example, see the inscription of a patesi of Susa, SAK. 176,  $s\bar{u}si$ -(ki) = Susa, the city, and ma-ti Elamti-(ki), the land of Elam. Notice the distinction of su-bir-(ki) = Subartu and kur su-bir-(ki) = Subartu, II R. 50 c, 48 and 60.

<sup>6.</sup> According to Schrank, Babyl.-Sähnriten, p. 30, subatu, = tág, has the special sense 'undershirt'. Be that as it may, the original Sumerian word cannot have any such special signification. Compare Gud. Cyl. A 27, 7, hurkurra tág-dim im-důl, 'it covers the lands like a mantle'.

of an instrument for preparing flax and hemp. Notice that the list V R. 14-15 distinguishes between garments  $t \dot{u} g$  and  $s \dot{i} g$ . In the ancient lists the quality of the tug and sig are indicated in the same manner so that we must infer that tug refers to material as well as sig. Compare RTC. 304, obv. I 19, tiglal tig-du with sig-du, 301, rev. 3, etc.; here du denotes a quality or grade of tug and sig. More often one finds sig-túg together, as, 2 talents 2/3 mana of sig-túg lugal, that is, of cloth composed of both wool and hemp (?) of the first quality, REC. 301, obv. 1. In RTC. 302, obv. 1-3, túg is distinguished from kad (-1) commonly supposed to be flax, or cotton. The general sense of tug should, however, be no longer in doubt, although a careful examination of the whole subject of the weaver's art would lead to more exact definition.

LEIIE sig, 'wool'; mudru, 'comb'; designates garments as made of wool. sigbar-lu, a woollen bar-lu, Nik. 254, but tügbar-lu, a linen barlu, V R. 14 c 37; ZA. IV 137, 8.

If id, 'canal, river'. id idigna', the river Tigris. idarahtu, the canal Arahtu.

 $\psi$  ( $\dot{g}a$ , 'fish', originally perhaps  $\dot{g}u$ , later ku; the value ku-u-a, Sm. 1300, obv. 31, leads to the inference that a final consonant may have been lost. Almost invariably placed after the word's. gun-ne-(ga) = kuppū. The fish most often met with in the early inscriptions is the suğur (ga), AA, REC. no. 288, evidently the picture of a large flat fish, resembling the skate, the plaice, and the turbot. Common also is the goat-skate, suğur-máš = šu-[hur-mašu] and the suğur-tun-maš = šaptu šaplitu or 'lower-lipped skate'. The suğur certainly denotes the ray species, evidently the most important fish in the waters of ancient Sumer. A species of this fish is the du-suğur, var. da-suğur in Gud. Cyl. B, 12, 1; 14, 26, and CT. XV, 26, 15. For lists of fish in the ancient period see Pinches, Amherst, p. 3 f.; Nik., pls. 91-93.

## CHAPTER V.

## Inflection and Postfixes.

Methods of inflection.

§ 68. The adverbial notions ordinarily expressed in the inflected languages by case endings are expressed for the most part by means of postfixes in Sumerian. uru-ta, 'from the city, in the city'. utul-da eda-sig, 'by the shepherd it was slaughtered'. galu-ra, 'against a man'. e-šú 'toward the house' [Gud. Cyl. A 19, 17]. Nevertheless the language possesses a simple but unmistakably clear system of noun inflection. The ordinary inflection of the status rectus is e which stands apparently for an earlier i. The primitive i is often retained.  $u^2$  appears in certain cases probably due to vowel harmony. Also the rounded forms of e and i, i. e.,  $\ddot{o}$  and  $\ddot{u}$  occur;  $\ddot{o}$  is especially characteristic of the status rectus of the pronouns of the first and second persons sing., ma-e, za-e. Doubtlessly the principles of harmony governed the choice of i, e, u,  $\ddot{o}$ ,  $\ddot{u}$ . Status rectus is a term employed here for want of a better one to indicate the principal functions of a noun in the nominative and accusative cases in the inflected languages. Opposed to the rather numerous endings of the status rectus is the single vowel inflection of the status obliquus  $a^z$ .

<sup>3.</sup> Written a-e.

<sup>4.</sup> Written u-e.

<sup>5.</sup> a by vowel harmony [or for other unknown reasons] appears as the rectus in many cases as mana, kalama, d.ningiszida, ama. ama-a is a subject in Gud. Cyl. A 13, 3. For the same reason pa-te-si appears as an invariable noun, never patesa, patesu. maš-ta-ba, 'companion', is in the rectus, SBP. 280, 6. kalaga, nominative, Bab. III, 246, 19.

By means of this inflection Sumerian expresses most of the ideas ordinarily expressed by the ablative, locative and dative in Latin. An examination of the language reveals of course a great many usages peculiar to itself. We shall study the inflections more minutely in the following sections.

§ 69. Nouns as subject. kalam-e ģe-gál-la šu-ge-a-da-peš-e, 'the land shall be filled with abundance', Gud. Cyl. A 11, 9. tukundibi dam-e dam-na-ra... ba-an-na-an-dúg, 'provided that an husband has said to his wife', V R. 25 a 8-11. kūr-kūr-ri já mu-da-sug-e, 'with oil the lands shall be laved', Gud. Cyl. A 18, 28. d-en-lil-li dumu-ni á-mu-un-da-an-ág, SBP. 280, 15. mu-lu ta-su mu-un-su, 'who comprehends thy form'? CT. XV, 11, 1. mu-lu-e (mulü) nu-mu-un-na-dib-ba-ra, 'the master comes not', SBP. 96, 4. d-mar-tu-e... ģe-ra-ab-bi, 'may Adad speak', SBP. 258, 11.

Object.

Subject.

§ 70. The objective. alan-na-e mu-tud, 'he has formed a statue', Gud. St. I. 5, 1. é-a dusu-bi...sag-gà mu-ni-gál, 'in the temple the head-cushion he carried upon (his) head', Cyl. A 20, 25. gišerin-bi ig-gal-šú mu-dim, 'the cedars he fashioned for great doors', Gud. St. B 5, 45. e-bi bal-e-da-bi, 'if he overstep the fosse', SAK. 18, V, 38. dúg-bi ĝa-ra-ab-ba, 'may it speak an utterance', SBP. 282, 19. nàgal-gal-e šu-um-me-ti, 'the great hail thou holdest', ibid., 24. uk-e... mi-ni-in-nad-e, 'he has caused the people to dwell', Poebel, BE. VI, 2, p. 130, l. 7.

It will be noticed that the accusative ending is often avoided by attaching the suffix bi, the status rectus of the indefinite article. A certain psychological sense of objectivity is added by means of the demonstrative bi, and consequently this suffix took on a wide variety of meanings derived from the adverbial notions expressed by the accusative. The peculiar development of this particle will be discussed when the adverbial notions of the accusative have been noted.

§ 71. The adverbial accusative has the inflection of the rectus and denotes the end of motion, which is a purely objective concept. an-ni

The accusative of time is falsely used for 'time in which', in ud-ne-e=ina  $\dot{u}mu$   $ann\bar{\imath}$ , 'on this day', K. 5135 rev. 19=V R. 50 b 22.

Adverbial bi.

§ 72. The feeling concerning the usage of bi in the accusative made itself particularly prominent on the adverbial side. Already in the classical inscriptions we have  $gibil-bi = e\check{s}\check{s}i\check{s}$ , newly, Cyl. A 19, 22, and igi-bi = ina  $pani-\check{s}u$ , before him, ibid., 20, 6, where we should expect  $gibil-\check{s}u$  and igi-ba. In translating texts the student must expect to find forms with the suffix bi employed in a variety of ways and success in discerning the force of any given example can be obtained only by considerable experience. The adverbial notions of bi, expressed in Semitic by ina or the suffix  $i\check{s}$ , are due to the peculiar force of the accusative ending in Sumerian. The Semitic  $ma'di\check{s}$ , greatly, may be expressed in Sumerian either by the directive  $\check{s}u$  or by the directive accusative e,i, hence we have  $ma\mathring{g}-bi$  and  $ma\mathring{g}-\check{s}u$  both for  $ma'di\check{s}$ .

imi-bi and imi-bi-šú=ina ramānišu, 'of himself'. The same force may be found in the ni of gamgamma-ni im-ta-ab-è=kadadaniš itaşi, 'in humiliation he went forth', SBP. 218, 11.

Oblique case.

§ 73. The oblique case or status obliquus, inflected with a has several clearly defined usages, viz., locative, instrumental, dative and temporal.

<sup>1.</sup> Hrozný, Ninib, p. 28; cf. 42, 38.

Locative.

§ 74. The locative: eri-a = ina maḥāzi, 'in the city', CT. XVI, 9, 18. sil-a gub-ba-meš = ina sūki ittanamzazzu šunu, 'in the street they stand', CT. XVI, 15, col. V, 14. šag-ba gi-unú...mu-na-ni-dū, 'therein the gigunū he built', Gud. B 5, 18. é-a slg-bi sīg-è mu-ni-gà-gà, 'in the temple he made glorious the brick', Cyl. A 18, 27. é-maġ-ni-a, 'in her great temple', Gud. St. A 2, 5. Used in a pregnant sense of entering and resting in a place, as é-a ba-ši-in-tur, 'into the house he entered', IV R. 7 a 17. é-a tú-a é-da-zu-dé, 'when thou goest to the house of washing', V R. 51 a 28. Also the locative of separation, uru-zu-a é-um, 'from thy city cause to go away (the wicked)', Bab., III, 248, 25. kaš bur-ra de-da, 'to pour beer from the bowl', Cyl. B 6, 26. šita-na, 'in his (its) water pot', IV R. 27 a 8. an-na, 'on high', (eliš), IV R. 9 a 61. ki-a sīg-gan mu-un-da-ab-zig = ina irṣitim innassab, 'from the earth it is torn', IV R. 4 b 5. imi-bi ki-azag-ga im-mi-dib, 'the clay from a sacred place he took', Gud. F 2, 16.

§ 75. The instrumental is sharply distinguished from the living Instrumental. agent, the latter being expressed by da. gul-a mag-bi lal-a-ni = ma'diš šalputi şandaku, 'by misery much am I bound', IV R. 19 b 41.

kára an-ni-ib-dū-e, 'with a knife one shall shear him', POEBEL, no. 57, 22. lù-găl-lu-bi zid-sur-na ù-me-ni-gìr, 'this man with a mixture of meal circumscribe', ASKT. 92, 14. šim-erin-na mu-na-ni-dū, 'with resinous cedar he made it', Gud. B 5, 19. The instrumental case is more regularly formed with the postfix šú, as in kàr-ra-aš mi-ni-in-dū-e, V R. 25 c 27. gìn-šú ne-sǐg, 'he smote with the blade', Eannatum, brique, B II 5 and passim.

Or by ta, § 103.

§ 76. The dative is employed as a secondary or exterior object with compound verbs of the first class, and often in the sense of the Indo-Germanic ethical dative. Sumerian more often employs for the indirect object of persons the postfix ra. dúg-dúg-ga...šu-zid-im-mi-

gar, 'he executed faithfully the commands', literally, 'he placed a faithful hand upon the commands, Gud. St. B 7, 7-9. igi-na nig-nu-mu-nani-ra, 'she did not smite her face', literally, 'did not smite anything to her face', Cyl. A 13, 9. The dative exterior object of compound verbs is really an ethical dative, or the so-called dative of advantage and disadvantage. An example of the dative not an exterior object is dubáš-áš nam-lagara... X nu-ab(?)-šú šu-na ba-an-sím-ma, 'two sealed deeds of the right to the psalmist's office... unto X, the..., he gave into his hand', POEBEL, no. 42, 2-6. Here šu-na, 'into his hand', is clearly a dative of interest. e-a giš-ģar-bi im-gà-gà, for the temple he made a plan', Gud. Cyl. A 5, 4. ki-bal-a sig-sig-ga-e-ne, 'for the hostile land — their overthrow is it', IV R. 18 a 35. e-a dū-ba mul-azag-ba gù-ma-ra-a-de, 'for the temple — for its erection — by the bright star he spoke to thee', Cyl. A 6, 1. til-la lu-găl pap-ĝalla-ge mà-e mu-un-ši-in-gin-ni, 'For the life of the suffering man me he has sent', K. 4654 rev. 16.

An example of the dative with persons is Gud. Cyl. A 17, 12-15, v. p. 126.

Temporal.

§ 77. The temporal function of the status obliques denotes time in which, or at which an event transpires; ud-ba, ud-bi-a, 'at that time, then', passim in all periods. ur-ri-gig-a, 'day and night', K. 3931, 7.

Genitive.

§ 78. a occasionally indicates the genitive both subjective and objective. é adda-na, 'house of his father', Poebel, no. 64, 12. mu lugalla, 'in the name of the king', ibid., 33, 14; 59, 12. lugal kingi urra, (written Left), 'king of Sumer and Akkad', VR. 62 a 35. üğ muššăttur-ra, 'poison of the viper', IV R. 26 a 14. umun-e é-tur-a, 'lord of the sheepfold', SBP. 318, 12. a, genitive, can be employed only when the construct is in the oblique case or the object of a verb, in other words only when ka could be used. In the last case SBP. 318, 12, umun-e is evidently an accusative, but the passage is not clear to me. In é-adda-na in-dü, 'he redeemed the house of his father', the rule is clear. See also Cyl. B 6, 14, uru-ni éš gîrsu-(ki)-na sum-mu-da, 'to establish his city, the abode of his Girsu', where na is evidently used to indicate

the genitive after an accusative, since uru-ni a direct object precedes. sag lugal-na uddam mu-e, 'the heart of his lord like day he made to arise', Cyl. A 19, 28. To Lugalzaggisi, lugal unug-(ki)-ga... išib anna, 'king of Erech priest of Anu', OBI. 87, I, 4-6.

§ 79. The status obliquus expresses various adverbial ideas, especially that of association to avoid the use of da with neuter objects. din kaš-a de-da, 'to pour out wine with beer', Cyl. B 6, 26. The descriptive obliquus in kalam ú-sal-la ģe-gál-nad, 'that the land repose in peace', Cyl. B 22, 19. diškur súr-ra-na ki ši-in-ga-bul-bul, 'Adad who in his rage causes the earth to quake', IV R. 28, no. 2, 11. ana denlila-da zag-di-a-na, 'in his rivaling with Anu and Enlil', ASKT. 80, 19. The oblique case is even translated by an adverb in ģul-la-na = hadiš, 'in his joy', ASKT 80, 17.

Association.

Description.

§ 80. The postfixes corresponding to prepositions in the inflected languages are ra,  $š\dot{u}$ , da and ta. ra and  $š\dot{u}$  often accommodate themselves to the preceding vowel becoming, ur, ir, er, ar,  $u\check{s}$ ,  $i\check{s}$ ,  $e\check{s}$ ,  $a\check{s}$  as the harmony of vowels may require. So far as I know, this application of the principle of vowel harmony has not affected the postfixes da and ta, probably owing to a certain feeling for the derivation of the words. The signification of ra and  $\check{s}\check{u}$  on the one hand and da and ta on the other is clearly marked. The psychological moment of the first group is objective, of the second group subjective, local and intimate. It will be seen, however, in the progress of the following discussion that  $\check{s}\check{u}$  is much more closely related to the second group than ra, and it is, therefore, the latter particle which forms the point of departure for our study of this important problem '.

Postfixes.

The locative principle seems to have been original with every one of these postfixes. A tendency to employ ra and da with persons and su and ta with things is unmistakable throughout the history of the

<sup>1.</sup> Postfixes have the oblique inflection  $\alpha$  with the exception of  $\delta \alpha$  and occasional  $d\dot{e}$  for  $d\alpha$ . The reason for the rectus  $\delta \dot{u}$  is inexplicable. We should expect  $\delta \alpha$ .

language. On the other hand the notions of movement from the centre toward the exterior or from the exterior toward the centre do not appear to have been differentiated. Thus the king of Lagash says gir-su-(ki)-ta umma-(ki)-su... e-gin, 'from Lagash to Umma he went'. But the Elamites come from Elam and sir-bur-la-(ki)-ta nigga nim-(ki)-su ni-ila, 'from Lagash carried booty to Elam', Thureau-Dangin, Une Incursion Elamite, RA. VI, obv. II.

ra dative.

§ 81. ra is evidently identical with the verb ara ( $\bowtie$ ) 'to go', in fact both ra, ri and ir appear in this sense.

The fundamental sense of ra is toward, implying motion toward and is employed properly with persons only?. The Semitic translation ana approximately represents the Sumerian ra. It is true that the grammatical texts occasionally translate ra by ina, but ra in  $an-\dot{u}r-ra$  = inaišid šamė, 'on the horizon of heaven' is clearly the phonetic ending, locative, and ra in VR. 50 a 33, is ra accusative, see below?

a-a-ni-ir ba-an-teg, 'unto his father he drew nigh', CT. XVII, 21, 117. galu-ra ba-ni-in-gar, 'upon a man he has put (a curse)', IV R. 7 a 19. sag-gig galu-ra šă-mu-un-mà-mal', 'headache against a man one has sent's. lugal-a-ni-ir... X... ė gir-su-(ki)-ka-ni mu-na-dū, 'for his king X has built his temple in Girsu', SAK. 148, no. 22.

ad-da-ne-ne-ra in-na-ab-kallagi-ne, 'to their father they will pay', Poebel, no. 28, 25. sal-nitag-dam-zu-ur... šagga-[zu] gu-mu-un-[na-de], 'unto thy wife say what is in thy heart', Radau, Ninib the Determiner, etc., 66, 4. a-a-za-ur ide-za d-mullil-ra u-ba-e-ni-bar-

<sup>1.</sup> For nig-gal; the a in the accusative preserved by force of etymology.

<sup>2.</sup> I have the recollection that M. Fr. Thureau-Dangin was the first to remark on this phenomenon but cannot find that he has published the statement. In  $\dot{e}$ - $k\dot{u}r$ -ra = ana ekur, IV R. 24 b 3, 'unto Ekur', ra is a phonetic complement and the form is really the status obliquus. So also in bar-ra, = ana ahati, 'aside', we have to do with locative case  $bar_{e}a$ .

<sup>3.</sup> Brunnow, 6366 f., has given a misleading statement concerning ra.

bar, 'look with thine eyes to thy father to Enlil', RADAU, Miscel., nos. 3, 23.

e-a-ni dū-ù-de...mà-a-ar ma-an-dùg-ga, 'he commanded me to build his temple', SAK. 212 c, II 7. umun-ra, 'unto the lord [it is not pleasing]', SBP. 98, 26. en-d-ningirsu-ra...mu-na-da-dib-e, 'he brought in for the lord Ningirsu', Cyl. A 8, 21; 9, 4. gù-de-a-ar... sag-an-šú il-da, 'to raise high the head for Gudea', Cyl. B 6, 17. dagal d-mušten-ra, 'unto the mother Mušten (he spoke)', SBP. 312, 23. Dative of disadvantage: mu-lu zi-da-ra ki mu-ni-ib-ri-rig, 'bread of faithful men it has seized', SBP. 22, 49.

It will be seen that ra is the ordinary inflection for the dative of *persons*, corresponding to the indirect object in the inflected languages. The ethical dative a is employed apparently with things only. The distinction between these two constructions is clearly indicated in SAK. 26 g) II, 3-6=h), IV 10-V 1, d-ningir-su-ra  $g\dot{u}$ -edin-na  $\ddot{s}u$ -na mu-ni-gt, 'unto Ningirsu Guedin he restored into his hand'.

The dative ra is used after persons at the end of a laudatory introduction to indicate that this person is to be construed with the following verb. SAK. 152, Lugalzaggisi  $\stackrel{\bullet}{=}$  OBI. 87, enlil... lugal-zaggisi... abarag dingir-ri-ne-ra ud d-enlil... lugal-zaggizi namlugal kalam-ma e-na-sum-ma-a 'Enlil to Lugalzaggisi prophet of the gods — when Enlil (to) Lugalzaggisi the lordship of the land gave'.

The same construction in VS. I, no. 4 = ZDMG. LXII, 399, but in this case ra is repeated in the clause as it should have been after lugal-zaggisi before namlugal above.

§ 82. Keeping in mind the original notion of ra as movement ra accusative. towards, against or for a person, we readily understand its function as an accusative suffix. galu-ra ussa = amela raksu, 'bind the man', CT. XVI 12, 42. ma-ra ud-šar-ra mu-un-na-gub-ba = ša jaši nannari

ulzizanni, 'me Nannar has established', SBH. 98, 29.

The same function appears perhaps in cases where ra marks a

noun as the object of a verb by way of anticipation. So Thureau-Dan-Gin, SAK. 11, note m, explains, e-annatum-ra mu d-ninni-ge e-ni-sd-a-ni... d-tug-e... e-annatum me, 'Eannatum when Innina had named him... the mighty, Eannatum am I',. Here ra according to this explanation serves as an anticipative object of the dependent phrase. A similar construction in SAK. 30 b I 6.

The postfixed ra of motion must not be confused with the demonstrative root  $\sqrt{r}$  § 164.

It would appear at first sight that the Babylonian adverbial ending -iš, aš should be a borrowing from the Sumerian, but I have endeavoured to shew that this is not the case 3. A certain influence of the Sumerian construction may have made itself upon the evolution of the Semitic adverbial ending.

šú construed with verbs.

§ 89. šú is construed with persons after certain verbs to denote the person with whom the subject is concerned in a transaction. zūr-zūr-rá-zu-ni gù-de-a-áš... šu-ba-ši-ti, 'he received the petition from Gudea', Cyl. § 90. šú is employed in the sense of because of, at the sight of, in Gud. Cyl. Inasmuch as the latter sign never appears as a postfix which would be the case if da were connected with Semitic  $id\hat{u}$ , we conclude that da is a pure Sumerian word 'for right arm' and from this idea the interpretation must depart. da means primarily with, beside, a person. In the psychology of the language da corresponds to ra, the one based on the notion of movement toward a person, the other of rest near a person or of action exerted by the person. da may be treated as a noun and augmented'; anda-ne  $=itti-\check{s}u$ , CT. Compound repositions.

§ 111. Compound prepositions composed of a noun and one of the four preceding postfixes arose through frequent usage of the combinations in question. For example  $igi^{\underline{s}}\check{s}u$  means 'unto the face', and  $igi-bi-\check{s}u$  means 'unto its face', i.e. 'before it'; igi-ni-ra, 'unto his face', 'unto him'. The noun or pronoun governed by such compounds must be placed between the component elements since syntactically it is a genitive depending upon a construct. The following are the principal compound prepositions.

igi-šú.

§ 112. igi-šú, 'towards the face', before, over against. igi-ukušú u-igi-bar-ra-zu ni-a jegallam, 'before the people whom thou regardest

§ 120.  $sag... \check{su}$ , 'for, or, at the head', is employed in two senses according to the interpretation of sag, which means literally 'head, top', whence  $sag-\check{su}=$ above, superior to;  $d\acute{u}g-ga-su...sag-bi-\check{su}$   $\grave{e}-a-\acute{am}$ , 'thy word arises above all's. sag is, however, more often taken in the sense of 'one', 'one head of oxen, sheep, slaves etc.' Consequently  $sag-\check{su}$  means 'in substitution for'. 1  $gud-gi\check{s}$  sag  $\acute{ab}$  10  $\acute{su}=$  'one ox, reached the age of virility, in place of a cow ten years old', B. § 121. šu... ta, 'from the hand of', 'from'. šu d.nannar-tum ta, 'from Nannartum (he received two scaled tablets)', Poebel, no. 42, 11'.

Position of suffixes.

§ 122. The suffixes ra,  $\delta u$ , da, ta should logically follow all others, as in uru-ni-ta, 'from his city', lugal-ni-ir, 'for his king', etc. Exceptions occur which are difficult to explain.  $ana\ d$ -enlila- $da\ zag$ -di-a- $na\ ga\check{s}$ - $tin\ nam$ -dug-ga-e-da-na = 'in his rivaling with Anu and Enlil, in his making abundant the wine', ASKT. 80, 19. ta occurs before the construct ending ka in  $g\check{u}$  id-lummagirnun-ta-ka, 'at the bank of the river L.', SAK. 38, III 20°. 'upon the pedestle of Ininni', RADAU, Miscel., 2, 40. ki šangu donin-mar-(ki)-ka-ta, 'from the priest of Ninmar (he has received)', CT. III, 19 D.

§ 123. Properly speaking  $\delta u$  and ra in the sense of 'toward', or representing the function of an accusative should govern nouns in the status rectus.  $igi-ni-\delta u$ , 'into her presence'. lugal-ni-ir, 'for his king'. a-a-ni-ir, 'unto his father'. In the case of ra the proper syntax will be found in most instances; of course when ra has the function of a dative the oblique ending should be used; ma-a-ar ma-ar-dug-ga, 'he commanded me'.

The cases with ra and šú.

In case of  $\check{s}\check{u}$  denoting 'motion toward', yet employed with the obliquus as  $\dot{e}-\alpha-\check{s}\check{u}$ , 'to the house', the force is rather 'to and rest in'. The case employed before  $\check{s}\check{u}$  will depend largely upon the emphasis placed either upon the motion toward or rest in'.

On the other hand the inherent force of da, with, ta, from, would naturally require the oblique case; za-da, with thee, ba-da, with it, etc. but vowel harmony would prevent this as in mu-lu-da; indeclinable words as patesi-da do not conform to the rule. The cases are, however, clearly distinguished in  $e^{it}$  deningirsu  $e^{it}$  lugal-na-ta, 'in the temple of Ningirsu his lord', Gud. B I, 2, and  $e^{it}$  lugal-na-ta, '(in the looked) toward his city',  $e^{it}$  lil  $e^{it}$ .

inflection may be added, as in dumu-dumu-ne, 'children', Gud. A 1, 3. Traces of this formation are found in late texts, as dingir galgal, 'the great gods' (often).

Indefinite

§ 125. For the personal plural indefinite the personal suffix ni was doubled, giving ni-ni which became ene (see § 159), often shortened to ne especially after vowels'. Thus we have é dingir-e-ne-ge, 'house of the gods'; ursag dingir-ri-e-ne-ge 'champion of the gods'; and lugal dingir-ri-ne-ge, 'lord of the gods', Cyl. A 10, 12.

labar-e-ne engar-ri-ne...  $\dot{u}$ -mu-tum<sup>2</sup>, 'if the psalmists, the farmers... brought a sheep', SAK. 54 i) I, 14.

Persons and objects after numerals have no inflection for number. 600 lu-nim-(ki) = '600 Elamites'. 5 gar = '5 biscuits'.

The plural suffix is identical with the possessive pl. suffix ene, 'their' (see p. 108); to avoid confusion the language generally employs bi-ne for the possessive suffix.

Concerning the relative position of the plural and construct ending, the construct comes last if the emphasis is upon possession by all the members included in the plural. Thus we have enima dingir-ri-ne-ka, 'by the word of the gods's; gud dingir-ri-ne-ge, 'the oxen of the gods's; and this is the ordinary syntax. When the genitive has the force of describing the construct and is thus more logically connected with it the construct ending precedes the plural. sal ud-bi-ta-ge-ne, 'women of the former days's. sib udu-sig-ka-ge-ne, 'shepherds of the wool-bearing sheep', Nik. 155 rev. I. nu-šar d·ba-ú-ge-ne, 'the gardeners of Bau', TSA. 42 rev.; DP. 106 V; 108 V.

Definite plural.

 $\S$  126. In the classical period the inflection for the definite plural is

<sup>1.</sup> ne because of its association with ene had the force of a plural as a suffix of both nouns and verbs, also as a verbal infix. Strictly speaking ne is but a variant of ni and often occurs in the singular. (Sayce was the first to give this explanation of e-ne.)

regularly me¹, employed only after nouns whose number is exactly defined; lu ki-enim-ma-bi-me, 'the witnesses', RTC. 16 rev. I (nine witnesses). dupšar-me, 'the scribes', RTC. 17 obv. IV (nine scribes). šu-ģa-me, 'fisher-men', TSA. 7 III 9 (three fishermen). sal-me, ibid., 10 rev. I 2 (five women). In all these examples the names of the persons included in the plural noun are given but a numeral does not stand before the noun inflected by me. me is indefinite in ursag-diggani-me, 'the dead heroes', Cyl. A 26, 15.

The form me is apparently independent of the ending ene. We may suppose a form me-me\* which became eme > me, developed by doubling the first person sing. me, thence transferred to the third person.

§ 127. In regard to things, animals, etc., Sumerian prefers to employ the singular in the sense of a collective, exactly as the pronoun bi appears for both 'his' and 'their', p. 108. anšu-ta udu-ta u-du-bi e-ta-šub, 'from the mules and sheep he took away their shepherd(s)', SAK. 50 VIII 17-9.

Plural of things.

Notice in business documents the descriptive term after persons takes the plural but after animals the singular, TSA. 20 obv. § 128. Nevertheless the Sumerians by mere force of analogy must have felt the necessity of indicating the plural of things in some way beside the laborious method of repeating the whole word or of no indication at all. As a matter of fact the word  $\int \partial -a^2$  (A), which means

The postfix  $\hat{g}\ddot{\alpha}$ - $\alpha$ .

- 1. In my Syntaxe I identified the plural me with me = bašû, deriving the later plural me-eš, meš, from the verb me + eš the verbal pl. inflection. This theory does not account for the classical use of me as a plural inflection and is here abandoned. For the use of me after definite plurals, v. Th.-Dangin, OLZ, 1907, 445.
- 2. For the pronunciation see Thompson, Reports of the Magicians and Astrologers, no. 103 obv. 11. According to Thureau-Dangin, REC. 207, the sign is derived from no. 476 + a. In any case  $\hat{g}a$ -a is connected with the word  $\hat{g}en$  'abundance'.

multitude, was placed after the names of things to indicate a large number of such objects. The earliest known occurrence is OBI. 11 rev. 4, in the total of a list of fibrous garments, nigin 90 tug &ă-a, 'total 90 fibrous garments'. CT. III 12 B 11, nigin 23 gud &ă-a, 'total 23 oxen'. CT. IX 23 rev. 36, nigin 1691 udu-&ă-a, 'Total 1691 sheep'. None of the texts cited are earlier than the Sargonic period and it may well be a scholastic invention'.

The Semites, so far as my own statistics shew, use A in the same manner, i.e., after things and animals only.

§ 129. The plural  $e\check{s}$ ,  $a\check{s}$ ,  $u\check{s}$  employed only with verbs, was attached to the definite pl. me giving rise to a new inflection  $me-e\check{s}$ , probably written  $\nwarrow$  at first, but latterly  $\nwarrow$ , employed by the Semitic scribes to indicate the plural of both persons and things.  $dingir-gul-a-me\check{s}$ , 'the wicked gods' passim.  $ga-me\check{s}$ , 'fishes',  $mu\check{s}en-me\check{s}$ , 'birds', etc. The ending does not appear in the inscriptions of the classical period and may be a Semitic invention. This  $(me\check{s})$  plural inflection of nouns is probably not identical with  $me\check{s}=\check{s}unu$ , 'they (are)', i. e., the  $\theta^d$  pl. of the verb me, 'to be'.  $gim-ma\ ekur-dig\ me\check{s}$ , 'offspring of the palace of the dead are they', IV R. 1 a 12.  $dam\ nutuk\ me\check{s}$ , 'a wife they do not take, (they are not taking)'.

The Semitic scribes indicate the dual by min, the ordinary word for 'two', but this method does not appear to be Sumerian.  $\check{s}u$ -min, 'two hands'; igi-min, 'two eyes'.

§ 131. To express the genitive relation between two nouns Sumerian employs the suffix ge (rectus) and ka (obliquus)<sup>3</sup>. Generally speaking, if the construct be in the rectus the genitive will be indicated by ge, if the construct be oblique the genitive will be indicated by ka. Yet ge may be employed if the genitive be put into relation with an oblique construct by the vowel a, as in gig-ù-na-ge, 'in the height of the night', IV R, 26 a 184; or in \(\alpha - zid - da \) lugal-zag-ge<sup>5</sup>, 'at the side of thy king', Cyl. A 6, 12 (§ 78). This proves that the essential force of the element  $\sqrt{g, k}$ , is one of emphasis binding the descriptive noun to its construct (if we may employ that term loosely here) to form a single conception. The inflection of the particle itself cannot be original and the reason for employing k in the oblique case and g in the rectus is not apparent. We should have expected either ge-ga or ke-ka<sup>6</sup>. The genitive may be possessive, dam lugalage, 'wife of the king', or descriptive, namlugal kalama-ge, 'lordship of the land'. Ordinarily the possessive suffix follows the genitive particle if its antecedent is the genitive, but precedes if its antecedent be the construct: gišdúr-gar-maý nam-nin-ka-ni, 'the great throne of her ladyship', Gud. F 3, 8. Here ni refers to the goddess possessor of the quality namnin. But arad ni-tug nin-a-na-kam, 'the

kam.

§ 137. The particle kam  $\Leftrightarrow$  , represents the oblique ka and the verb (a)m to be. ud-ba entenena patesi širburla-(ki)-kam enlitarzi šangu d-ningirsu-ka-kam, 'then Ent. was patesi of Lagash and Enl. was priest of Ningirsu'. Considerable difficulty presents itself in connection with this construction for we should expect the status rectus ge-em\* here, a form which never occurs. If we accept my interpretation of the  $\sqrt{m}$  as the verb 'to be', then the construct is the complement which is regarded as thus deflected from the status rectus sufficiently to throw the genitive into the oblique case.

min-kam-ma... d.nin-dub-kam, 'the second is the lady of writing', Cyl. <sup>1.</sup> The sign of the construct is often omitted.

<sup>2.</sup> Literally 'the river — at its mouth'.

<sup>3.</sup> For, 'The neck of the wild-ox' etc.

Double construct.

§ 139. Double constructs occur when a genitive in turn becomes a construct. The double construct is usually indicated by doubling the particles. We have seen that the least tendency to throw the construct out of the status rectus is sufficient to bring about the oblique inflection of the genitive. For the same reason a construct itself genitive by reason of a preceding construct would throw its genitive into the oblique case. Thus in šangu dinin-girsu-ka-ge', 'priest of the lord of Girsu', ka indicates the genitive of girsu since its construct nin is a genitive. If however the first construct is in the oblique case then the final genitive will be ka-ka as in gi-ka-na dinin-magitir-azag-ga-ka-ka, 'in the gikana of Ninmah of the sacred forest'. Here the second ka denotes the genitive of Ninmah depending upon the locative gikana. gan ù-gig-ga gan-kenaga dinin-girsu-ka-ka, 'in the field Ugig, field beloved of the lord of Girsu', SAK. 56 i) IV, 15.

An example of the external plural of a double construct is sib udu-sig-ka-ge-ne ba-gar-èš, 'the shepherds of the wool bearing sheep have sheared (?)', Nik. 155 rev. I.

The double construct in mu-dug sà-a d·innina-ka-ge, 'the well named of Innina', St. Vaut., obv. 2, 5 proves that innina is a compound'.

§ 140. ge often marks the subject of a sentence, even when the word so inflected does not consist of a construct and genitive. 1 gud bàr maš-da-ri-a a-ka-ni ġar-tud é šugga-ka-kam patesi-ge Šubur-d-ba-u dumu e-na-ba, 'one white ox is the property of Akani, the ġartud of the house of provisions; the patesi has given it to Šubur-Bau the younger', TSA. 32. d-enlil-lù-šag nu-eš-ge ili-šu-ba-ni-ra in-na-an-sig, 'Enlil-lušag the nu-eš gave to Ilišubani', Poebel, no. 39, 16. ## CHAPTER VI.

## Nouns and Adjectives.

§ 142. Sumerian roots appear to have been ordinarily biconsonantal. In a certain measure the verb of a given root ordinarily appears with the vowels i, e, the noun and adjective with the vowels a and u. the vowel  $\ddot{u}$  may be assumed, occasionally written with the forms containing i, we may presume that a considerable number of verbal roots were pronounced with this sound. The vowel a appears to have occasionally represented o, in which case a certain number of nouns and adjectives were pronounced with the internal vowel o. I shall assume for etymological and lexicographical purposes that the verbal root is originally internally inflected with the vowels i, e, but shall make no attempt to distinguish the verbal roots which may have possessed the internal vowel ii. The nouns derived from such roots ordinarily possess the internal inflection a (and o?) and u; the infinitive being itself a noun of state or action frequently appears as a noun. It will be seen that the majority of roots can be lexicographically analysed upon this principle, and only by the discovery and logical operation of such a principle can we hope to place the lexicon upon a phonetic basis.

Verbal and nominal roots.

§ 143. The two consonants give the root its general fixity of meaning, and the internal vowel adds a modal significance. Thus for the root g+r we have the verb  $gr=es\bar{e}ru$ , 'to outline', and the nouns -gar=harru, 'plan', gur=usurtu, 'design', and tertu, 'oracle'. According to this principle the following formations will be readily under-

- 2. In this root the noun form kud through influence of frequent usage took on the verbal meanings  $d\hat{e}nu$ , 'to judge',  $er\tilde{e}su$ , 'to seek wisdom',  $mal\bar{a}ku$ , 'to counsel', harasu, 'to dig', and synonymns  $gar\bar{a}ru$  and gamamu, 'to dig'. By further extension  $kud = ar\bar{a}ru$ ,  $tam\hat{u}$ , 'to condemn, curse'. Nouns of the form a and u which by extension became verbs I shall designate as  $denominal\ verbs$ .
- 3. The confusion of s and š in Sumerian roots is due to Semitic tradition. In these cases where we must depend entirely upon Semitic grammatical texts it is impossible to determine which of the two sibilants was original since the Semites seem to have interchanged not only s and š in their own language, but occasionally to have carried out the same process in their pronunciation of Sumerian. In the case of this root the original was clearly  $\dot{s}ir$  since the spelling  $\dot{s}e\cdot ir$  ( $\dot{s}er$ ) occurs in texts of Gudea (Cyl. A 27, 10; 28, 1, cf. VS. VIII 23, 1).

The form gur appears only as a denominal verb  $g\bar{u}r$  ( $\bigcap$ ) =  $gar\bar{a}ru$ . Compare also  $\bigvee$   $kin = \check{s}ipru$ , 'message', a sign which has also the value gur.

By dissimilation we have  $k\hat{i}r = ham\bar{a}tu$ , 'hasten' ( $\vdash\vdash\vdash\mid$ ),  $kar = pad\bar{a}nu$ , 'route' ( $\vdash\vdash\mid$ ), irribu, arbu, 'fugitive', kar ( $\not\succ\mid\mid$ ), and the denominal verb  $k\hat{a}r = las\bar{a}mu$ , 'to run away'. This dialectic form already in Entemena Cone, 3, 16 ba-da-kar, 'he ran away'. The dialectic form mir occurs passim as mer, me-ri = sepu,' foot', tallaktu 'way'.

gil, 'make smooth, pass away', halāku, nakāru; 'to hew',  $\square$  (gil); also noun gil=idgurtu, 'a carved bowl'. Derivative gal in the dialectic form kal in  $\square$  kin-kal>kan-kal=iklu nakru, 'plot of ground with demolished house', nidûtu.

nir, 'chant, sing',  $supp\hat{u}$  ( $\not\models \psi \psi \psi$ ); also noun  $t\hat{u}ni\hbar u = nir$  and cf. loan-word  $n\hat{r}ru$ , 'dirge', Del., HW., 461. Also in anir, 'lamentation', Gud. Cyl. B 10, 8 etc.

The noun  $\check{s}u$  ( $\swarrow$ ), 'hand', has no cognate  $\check{s}i$ ,  $\check{s}a$ , yet notice that compound verbs are formed with both  $\check{s}u$  and  $\check{s}a$  prefixed;  $\check{s}u-s\dot{i}r-s\dot{i}r$  and  $\check{s}a-s\dot{i}r-s\dot{i}r$  both  $\Longrightarrow kar\check{a}bu$ , 'to offer with prayer?'. The prefixed element in both cases must be the same whether it be connected with the word for 'hand' or not.

§ 147. Roots of the formation with a single consonant followed by a vowel or preceded by a vowel which have attained such form by dropping a final or initial consonant must not be confused with the original formations discussed in §§ 144-53. Thus we have  $di = nab\bar{a}tu$ , 'to shine', ( $\vdash \bigvee \bigvee$ ), and RI, glossed di- $e = nab\bar{a}tu$ , Virolleaud, Ishtar, VII 69; also de ( $\vdash \bigvee \bigvee$ ) =  $nab\bar{a}tu$  and diparu, 'torch'; all of these forms go back to the root dib. de, 'to pour out',  $tab\bar{a}ku$ , šap $\bar{a}ku$  is a contraction of  $dib = tab\bar{a}ku$ , which root appears more often as dub a denominal form.

§ 148. Secondary formations by means of vowel prefixes are common.

1. Prefixed  $a:anir>a\check{s}er=t\hat{a}ni\hbar u$ , 'wailing', from the verb nir, 'to chant'. agug, 'miserable' from gug adj. of  $\sqrt{gig}$ , 'be in misery';  $uru\ a-g\hat{u}g-ga\ a\ gi-a-zu$ , 'unto the wretched city when wilt thou turn?''.  $asig=\check{s}aplu$  and  $anim=\bar{e}l\hat{u}^s$ .  $\acute{a}$  serves as a vowel augment

- a) nam to form abstracts; nun, 'great', namnun 'greatness'; rig, 'to plunder', namrag and namrig, 'spoil': til, 'to live', namtil, 'life'. The compound preposition nam-šú (= aššu), 'because of', may contain the same element; nam-bi-šú, 'as for him'; also without šú in na-ăm uri = aššum ali, 'because of the city' SBH. 88, 15; 135, 8. The prefix has apparently no connection with the noun nam = šimtu, pirištu, 'decision', 'destiny', which should be referred to the root nim, 'utter decision', found only in the derivative inim > enim, 'word'. nam is frequently spelled out na-ām (so! never na-am) as in na-ām-gil=šahluqtu from gil = halāqu; na-ām-nir=etillūtu, 'valour', from nir, 'be valiant'

<sup>1.</sup> For both persons and things.

- c) nig: nig-gul = limuttu, 'wickedness'. nig-sid, 'total account', v. Sum.-Assy. Voc. 9316. nig-gar (> nig-ga) = makkuru, 'goods'; cf. sag nig-ga-ra-kan, 'all of the goods', Hilprecht, Anniversary Volume, p. 200. nig-ba = kistu. nig-zid = kittu. nig-guš = šakkaštu, 'slaughter'.

- § 150. The four prefixes an, in, im, al forming both abstract and concrete nouns are evidently euphonic augments.

Euphonic augments.

- a) an: an-dûl = andullu, 'shadow', from dul, 'to cover'; an-dûl, Gud. Cyl. A 3, 14. Code of Ham., 2, 48. Perhaps also in annam = mimma šumšu. antul = šuklû, 'perfection' from til, 'to be complete'. [So read for SAI. 1138].
- b) in: indubba in nin indubba-ge, Gud. St. B. 8, 52, 'lady of letters?' in-di=alaktu, 'way', from di, 'to walk', BA. V 620, 14.
- 1. Invariably written  $\Delta m$ . The explanation given here for  $\Delta m$  contraction of nam presents difficulties.  $\Delta m$  may be a decayed form of  $\Delta g$  and connected with nig (nag?). In this case  $\Delta g$  in  $\Delta g gig = ikkibu$  and  $\Delta g gir ra = d\bar{a}iku$ , cited above § 149, would be abstract formations. Notice  $\Delta m mig gid$  (or  $\Delta g gid$ ?), and dialectic  $\Delta m ma al = bu \dot{s} \dot{u}$ , 'property in live stock'. Frankly most of the forms read  $\Delta m$  may be read  $\Delta g$ . It should be noted that a derived form of nig may have existed as nag\* which gave rise to  $\Delta g$  and nam.
- 2. The god nin-dub, SAK. 263, can have no connection with nin-indubbα-ge of this passage. •

- c) in : only in imdub=pašāhu; imdubbu=nihtu.

## § 154. Compounds:

Noun + adjective.

- 1. Noun and Adjective: ab-gal, 'councillor', 'sage' = ab, 'old man' and gal, 'great'. Loan-word abkallu. aš-bal, 'curse', from aš, 'a curse', and bal (tamū), 'utter', here 'uttered': aš-bal = arratu. šu-bad, 'hand-open', name of a standard unit of linear measure, Stèle Vaut., obv. V 7: Th.-Dangin, RTC. 138, 3: see Journal Asiatique, 1907, 97 n. 3. lik-bar, 'dog-savage', hence barbaru, 'hyena'. lik-mağ, 'dog-large', hence nêšu, 'lion'. é-gal, 'house-large', hence egallu>ekallu, 'palace'. a-sur, 'water-shining', hence asurru and asurrakku, 'fountain-water', 'source-water', mê sarruti, CT. XVII 34, 23. lù-gal, 'man-great', lugal, 'king'.
- 2. Adjective and Noun: gal-túr, 'the great court', RA. VII 108 Adj. + noun col. 13.
- 3. Noun and Verb:  $\dot{a}$ -ag(g)a, 'oracle', 'injunction';  $\dot{a}$ , 'oracle, Noun + verb. sign' (literally hand) and aga, 'do, act', Semitic tertu, urtu, tešlitu.  $\dot{a}$ -gal, 'wise', le'u, muntalku, from  $\dot{a}$ , 'wisdom', and gál (bašú), 'to possess'. lù aš-bal, 'man who utters a curse', amelu arru. sag-bu-bu, 'head-trembling', a disease, Semitic nûš kakkadi: the word for nâšu, 'to tremble', is bul, here shortened to bu. The construction is composed rather of a noun and infinitive, an inverted construct, see no. 5.

bur-gul, 'stone-vase' and 'to sculpture', hence purkullu, 'sculptor'.

giš-bur, 'instrument-to cut', gišburru, 'cutting instrument'. ģen-gāl, 'abundance+to be', hegallu, 'abundance'. šu-luģ, 'hand+to wash', šuluhhu, 'hand-washing'. guza-lal=guzalū, 'stool-bearer'. giš-sal, 'wood+lacerate', 'lacerating wood'='whip', 'scourge', gisallu=

Direct construct.

4. Two nouns in direct construct relation: ki-in-sū, 'place of darkness', = nigiṣṣu, 'crevice, cave'. ab-zal (), 'place of fire', = maṣādu, 'oven'.

kanag, 'land', from kan, 'field', and ugu, 'people'. zag-mu, 'beginning of the year', zagmukku.

Inverted construct.

5. Two nouns in inverted construct relation. su-mug, from su, 'body' and mug 'distress', (gilittu), hence 'distress of the body', \(\sum\_{\text{inig}}\) (sumug) = šûtu, sûlu: su-mag > sa-mag = umsatu, \(\sum\_{\text{inig}}\) (samag): both mug and mag are derivatives of  $\sqrt{mig}$ , 'to be in distress'.

šag-sik-sik-ki, 'depression of heart', šakummat libbi, (passim in omen texts). ne-sag, 'fire+giver', 'giver of fire offerings', nisakku, 'sacrificer'. kūr-gūn=naphar mātāti, 'totality of lands', Gud. Cyl. B 7, 17. šu-illi=niš kati. d-illi=niš idi. babbar-è=sit šamši. antr=išid šamši. šag-dug-ga-su=tāb libbi-ka.

Three elements.

6. Nouns with three elements: zig-šag-gál = zišagallu, zig = napištu, 'soul', šag = libbu, 'heart', and gál = bašû, 'to have'; meaning is probably 'breath of life'. d. Bau is the zišagal of Gudea, Cyl. A 24, 6: 'longing', hence a synonym of ikribu 'prayer', OBI. pl. 30 l. 17. kalam-e zišagal ù-ma-sum, 'let it bestow upon the land the breath of life', Cyl. A XI 24. šag-túg-dúg-ga=šakšu, 'afflicted': šag, 'heart', túg, 'restrained', dúg, 'speak', "he who speaks with restrained heart". ka-azag-gál, 'enchanter; 'he who has an holy mouth'. gi-pad-ud=šutukku, 'shade-room'; 'cane which wards off light'. nig-sag-ili=pûhu, 'likeness', 'image'; 'that which holds its head up'.

Reduplicated root.

- 7. barbar, 'brightness', + = birtu; '+ = babbar, 'the sun', an intensification of the word bar 'to shine'.
- 1. The construction is similar to the Latin, telluris pondus, or the construction combined into one word as German Wonne-gefuhl, Greek βιο-χωλύτης, 'hinderer of violence', bailiff. The formation is wholly unsemitic.

## CHAPTER VII.

#### Pronouns.

§ 155. Sumerian makes no distinction in form for the genders of First person. the first and second personal pronouns. The original root of the first person according to the grammarians is gin Sc 284, which apparently became men at an early date. We are inclined, however, to doubt the authority of the grammarians on this point, since gin > men may well be for ge the emphatic particle +en, a form of the verb 'to be', the whole meaning 'verily it is', often translated by anaku and atta' in the Semitic idiom; thus me nu-gin and za-e nu-gin would be translated by ul anaku and ul atta, 'not I, not thou'. As a matter of fact the Sumerian gin does not correspond to anaku and atta; the phrase actually means, 'I verily it is not', 'thou verily it is not'. In the texts we often meet with gin or me-en employed in this sense without me or za-e, the real words for 'I and thou', as en-men, 'I am lord', or mulu gu šar-šar men, 'a tender of the garden plants art thou'. Thus arose the erroneous notion that gin>men was the Sumerian word for . I and thou.

The first person singular is regularly me-e = anaku for the status rectus; me-e dam-dam-ta (sic) = anaku aššatu3. me-e gàl-lá-bi = 'I

a gallu-demon''.  $me-e \ bur-ma \mathring{g}-a^2$ . The form appears without vowel prolongation, as in  $ur-d.ba-\mathring{u}$  me= 'Ur-Bau am I''s.  $\acute{e}-anna-t\mathring{u}m$  me, 'Eannatum (am) I''.

The form of the status rectus often appears with the rounded or umlauted e, usually designated as  $\ddot{o}$ , and written a-e, see above p. 35 n. 6. nig mà-e ni-zu-a-mu = 'that which I know's. kùr-kùr bàd-gal-bi mà-e = 'of the lands, their bulwark am I's. Also written me-a  $(m\ddot{o})^{7}$ , SBP. 318, 20, mu-lu-mu me-a; me-a  $(m\ddot{o})$  d.dumu-zi-de = 'I unto Tammuz (will go)', ibid., 328, 23. One must expect to find the cases written incorrectly, as in CT. XV 30 obv. 3 ma-a for me-e, v. SBP. 334, rev. 1, and 336 note 11.  $m\grave{a}$  ga-mu-ra-bur-bur, 'I will reveal to thee', Cyl. A 5, 12.  $m\grave{a}$ -e as object in en-e  $m\grave{a}$ -e mu-un-si-in-gi-en, 'the lord has sent me', IV R. 17 a 40.

The status obliquus is ma,  $ma-a=iaši^s$ . ma-ra=ana iaši, used as an accusative, SBH. 98, 29 and v. SBP. 120, 27.  $m\grave{a}-a-ar$  ma-an-dig-ga, 'unto me he has spoken', SAK. 212 c II 7. Naturally the form me-en-na-ta=ana iaši, Samsuiluna, LIH. no. 99, 22 is an error in which the false men discussed above, is employed for the status obliquus.

The plural is regularly formed by adding ene to the singular; me-e-ne. me-en-ne ša-ab u-mu-un-tug-e-en-ne = 'we will pacify the heart of the lord'.

- 8. V R. 12 a 24, written both ma and  $m\dot{a}$ . It is probable that HAUPT, ASKT. 118 rev. 9, ma-da should be corrected to ma- $ra = ia\dot{s}i$ ; for ra employed in the sense of an accusative see § 82.

from the independent forms. The status rectus is mu, obliques ma. It is possible that the vowel u is due to the labial m. lugal-ma, 'my king', lugal-ma, 'for, to, my king'. kel šágga-mu, 'oh my good maiden''. e-mu im-ma-ab-tum-mu-ne — 'my temple they plunder'. di-kud-a-ma šu-ni-ib-bal-e-a, 'whosoever changes my decrees', status obliquus, dative object of a compound verb'. e-ma, 'in my temple'. uru-ma, 'in my city's. mu is employed incorrectly for ma in ki-mu-ta=itti-ia,  $AL^3$ . 91 a 27. The plural suffix of the first person was originally identical with the independent form mene, but when attached to words it is generally shortened to me since the accent then fell on the word to which the form was attached. We have, however, at least one example of me-en in en-me-en=beli-ni 'our lord', SBH. 39, 3. The regular form in ad-da-me-e 'our father', dagal-me 'our mother's. The plural has no inflection for the cases. An example of the oblique plural is ki-me-ta=itti-ni,  $AL^3$ . 91 a 28.

§ 157. Following the analogy of the first person we should expect the independent status rectus of the second person singular to be ze-e or zi-i and za-e ( $z\ddot{o}$ ). zi and si are found as sporadic forms  $\tau$ , yet za-e is the only word employed in the texts for atta. an-na za-e  $ma\dot{g}$  me-en — 'in heaven thou art great'. e-lum  $za^2e$ , 'mighty art thou's.

The status obliquus is za-a;  $za-a-\delta u = [ana] k\bar{a}ta$ , 'unto thee' <sup>9</sup>.

mŭ nam-ti-la za-a-ge, 'the incantation of life verily [is] of thee' (belongs to thee). šág-ga tag-tag-li-bi za-a-ģen, 'to make clean and

bright verily is of thee'. The form za-e is employed falsely for za-a in  $za-e-ra = ana kāšāma^2$ .

In certain cases za-e is translated by  $k\bar{a}tu$  where the Semitic idiom demands the oblique form but the Sumerian the rectus. Such examples must not be considered errors, as za-e enem-zu= $k\bar{a}tu$  amatka, 'as for thee thy word'.

The plural is zi-ne written zi-en in the syllabar K. 5423, me-en-zi-en = at-tu-nu (E), where zi-en = attunu<sup>3</sup>.

Sec. per. suffix.

§ 158. The suffixed sec. per. sing. is zu for the rectus and za for the obliques. The singular mu may have caused the change zi > zu by force of analogy. §ag-zu ge-en-tig-e, 'may thy heart be pacified'. ta-zu mu-un-zu, 'thy form who comprehends'?' ni an-na a-nim za-da §a-mu-e-da-gal, 'fear in high heaven is caused by thee's. The scribes employ zu and za so indifferently and incorrectly that the distinction between them appears to have been lost and the choice made according to vowel harmony. The sibilant z accommodates itself more readily to the palatal a, a fact which may account for the prevalence of the form za for both rectus and obliques. For zu in the oblique case, v. mug-zu-su, 'over thee', a clear case of harmony, SBP. 282, 22. mur-du-zu, 'at thy thunder', 280, 14; zapag-zu-su, 280, 13.

For za in status rectus, v. ma-e e-ri-za u-gul (or sun?)-an-ma-ma, 'I thy servant pray unto thee'.

The plural suffix is zu-ne, mu-lu-zu-ne, 'your lord', SBP. 320, 8 f. en-zl-en, one of the peculiar independent forms of the syllabar

§ 159. The language endeavours to make a distinction of genders in the third person singular by employing ni (rectus), na (obliquus) for persons and bi, ba for inanimate objects, a principle which, though often violated, may be regarded as primitive. Amaud, ZK. I, 245, first made this statement, denied by Hommel, Sumerische Lesestücke, 100 and Prince, Materials, XXII. Usage decreed that the form with b should be employed almost exclusively for the demonstrative pronoun in the singular independent.

Third person demonstrative.

ni occurs in this sense but rarely;  $ni = \check{s}u - \mathring{u}$ , B. M. 93070, 5°.  $NA = ni - e(n\bar{e}) = \check{s}\bar{u}$ , B. M. 81-7-27, 200 obv. 16.  $n\bar{e}$  ( $\nearrow$ ) =  $ann\bar{u}$ , V R. 31 a 9.  $ud - \check{s}ar$   $ne - e \dots gim - me - e n$ , that crescent... was created, IV R. 25 b 54. ud - ne - e, 'this day', K. 5135 rev. 19. The oblique form na was explained by the grammarians, [K. 5423, 19 and 7701, 3 ff.] but the texts are too badly preserved to be used for our purposes.  $ne - e - ta = ina \ anniti$ , IV R. 6 a 33, incorrect for na - a - ta. ne - e is used incorrectly for the oblique case in  $ud - da \ ne - e = ina \ \mathring{u}mi \ ann\bar{\iota}$ , IV R. 28 b 9. ni in e - ri - a - ni kin - kin - e - ne 'they seek in the desert', is the article but the construction seems to be oblique, SBP. 12, 8.

 $bi = \$\bar{u}$ , bi-a and ba = ana \$uata, K. 5423, 21-3.

bi-e nad-de-en, 'he slumbers', SBP.318, 16. ba-e $(b\ddot{o})$  corresponding to  $m\dot{a}$ -e, me-a  $(m\ddot{o})$  and za-e $(z\ddot{o})$  does not occur. The oblique case ba-a, bi-a has not been found as an independent word.

bi and ni as demonstratives may be suffixed and even reduced to the force of a definite article, 'the', a usage which should not be confused with that of the possessive suffixes. galu-bi ku-li-mu ge-dm, 'that man

verily is my friend'. ud-sar ne-e, 'that crescent': la-la-bi nu-gi-gi, 'the abundance returns not'. gù-de-a-ni, 'the Gudea', SAK. 102 XII 12.

Oblique forms.

The oblique forms ba, bi-a, and na suffixed; e-ba, 'in that house'. ud-ba, 'at that time, then', passim.  $\check{su}$ -galu-ba-ge, 'in the hand of that man'. nig-erlm e-bi-a im-mi-gi, 'evil from the temple he turned away'. ki-bi-a = ina  $a\check{sri}$ , 'in the place'.  $e\check{semen}$ -ba, 'in the banqueting hall', SBP. 294, 34. el-la-na, 'in the joy', ( $hadi\check{s}$ ).

ki-a-na  $\rightleftharpoons$  ana irsitim, 'upon the earth'. su-na, 'in the body'. ib-ba-na, 'in the anger'. Since the demonstrative na expressed all the ideas conveyed by the oblique case, it obtained in late texts the force of Semitic ina and ana, a usage entirely foreign to the language, and a pure Semitic innovation, as in igi-su-na  $\rightleftharpoons$  ana pani-ka, which should be igi-su-su. bi is often incorrectly written for ba. ti asag-sa-na u-me-ni-rig, 'with thy pure curse purify him', IV R. 22b 13. su-bi in the body'. ka mu-ri-a-bi=ina mi/brit  $b\bar{a}bi$ , 'within the gate'.

Plural.

The plural of ni is e-ne a contraction for ni-ni or ne-ne. e-ne = šu-nu, K. 5423, 24. e-ne...ma-ra-è-è, 'they will give thee light', Gud. Cyl. A 11, 27. In the later period the Semites strengthened the form to e-ne-ne, ni-ne-ne., and even e-ne-ne. The plural of ni and bi formed by the inflection me occurs as the plural of the definite article. li ki-enim-ma-bi-me, 'the witnesses', RTC. 16 rev. I. ursag-diggani-me, 'the dead heroes', Cyl. A 26, 15. The plural ne-ne, e-ne, was then used as the ordinary inflection for the plural of nouns often abbreviated to ne after a vowel; it appears as such in the plurals me-ne and zu-ne, 'we, you', discussed above.

e-ne is really nothing but ni strengthened by reduplication and reduced by loss of the first n; it consequently appears even for the singular in e-ne-ir = 'for him', SBP. 312, 14'.

bi forms its indefinite plural in the ordinary way, bi-ne, only as suffix possessive in umun-bine, 'their lord', sib-bine, 'their shepherd', SBP. 210, 15 f.

Ordinarily the demonstrative is placed after the adjective attributes which follow a noun, as essad azaggal-bi, 'the sacred tax-collector', Gud. Cyl. B. 15, 1. See also K. 5135 rev. 19.

§ 160. The possessive suffixes are identical with the independent and demonstrative forms; here, however, the language attempts to distinguish persons and things; the exceptions to this rule are numerous especially in late texts. ama-ni, 'his (her) mother'. šag-ni, 'her heart', gab-ni, 'her breast's. ka-silim-zu dúg-bi ġa-ra-ab-ba, 'may thy sonorous voice give its utterance's; gāl-la-bi, 'its booty (the dogs defile)'s. giš-ik-anna-bi, 'its high gates's; tukul-li-e-ne kin-gi-a-meš(sic!), 'unto his friend send him', (accusative of end of motion), CT. XVI 46, 156; (the var. falsely na for ne).

The possessive plural suffix, uninflected for case, is ordinarily bine (see above), bene, benene (see above), as in  $mu\mathring{g}$ -benene =elišunu,  $du\mathring{g}$ - $du\mathring{g}$ -bi-e-ne = 'their abundance', IV R. 20 obv. 21. To avoid the use of ene in this sense, which would then be identical with the plural, dingirene, 'gods' and 'their gods', the language often resorts to the collective bi, ki-bi, 'their place', ni-bi-ta = ina ramani-sunu3. This double usage of bi4 for both singular and plural is confusing and in case of pure Sumerian texts the translator must decide according to the antecedent. ne-ne occurs in ki-ne-ne-ta = itti-sunu, AL3. 91 a 26.

This explanation seems to be the only satisfactory one for cases like SBP. 84, 14 ff., where ra marks the subject<sup>2</sup>.

Variant ul. § 164. By the change r > l arose the form ul. é-ul, 'that temple yonder', 'the other temple', Cyl. B 2, 11; 6, 2. ud ul-ll-a-ta, 'from those days, (since long ago)', SAK. 198 e 16, and 72 VIII 27. The form li has chiefly a temporal significance. ur'-ri-li- $na^3 = ina$   $um\bar{e}$  ulluti, 'in those days', SBH. 97, 48. Transferred to the future li came to mean 'the future', arkatu. li-zu = arkat-ka, 'thy future', SBH. 110, 28. Especially in li-su = ana mati, 'until when'?, employed in an interrogative sense.  $li = suatu \ V \ R$ . 27 a 37. Also in é-li-na azagga  $kibkibbi \ ni$ -bur-bur, 'in yonder holy temple she frees from sickness', K. 3931 oby. 11.

Interrogatives. § 165. For persons, corresponding to mannu, the regular interrogative is  $ab\bar{a}$  (a-ba-a, SBP. 200, 22),  $aba^4$ ; aba-d.enlil-dim, 'who is like Enlil'?, a n. pr. aba me-a-ni, 'who is this'?' aba ba-ra-e, 'who shall escape' (?). aba ib-šed-de, 'who shall allay'?' mulu, dialectic for galu = amelu, 'man', is also employed for the interrogative; mulu ta-zu mu-un-zu = kattuk mannu ilammad, 'thy form who comprehends'?

For things corresponding to  $min\bar{u}$ , there are two words  $an\bar{a}$  and  $t\bar{a}$ . Both  $ab\bar{a}$  and  $an\bar{a}$  were derived by adding  $b\bar{a}$  and  $n\bar{a}$  to the interjection

 $\bar{a}$ , but the force of  $b\bar{a}$  and  $n\bar{a}$  has been interchanged. We should have expected  $an\bar{a}$  for persons since  $n\bar{\imath}$  and  $n\bar{a}$  generally designate persons, and vice-versa  $ab\bar{a}$  should be the form for things.  $a-na-a-a-\bar{a}m$ , 'what is it?' and mallabi, 'what is there?' The syllabar K. 4603, = PSBA, 1888 June, pl. III, gives ta and a-na as synonyms; also  $ta-\bar{a}m$  and  $a-na-\bar{a}m$ ,  $te-\bar{a}m$  and  $e-ne-\bar{a}m$ , all interrogative pronouns.

From ana by adding the postposition  $\dot{s}\dot{u}$  reduced to  $\dot{s}$ , the interrogative adverb, ana $\dot{s} = ammeni = \dot{w}$  why?', is derived.

The indefinite interrogative (iau, aiu) seems to have been  $m\bar{e}$  for things and ani, ana, for persons. me-e enem=iau awetim, 'what word?'s Sumerian apparently possessed a root ni, na=amelu, of which we have a trace in na=amelu, 'person': a-na ib-aga-a na-bi nu-un-zu, 'what he has done this man knows not', IV R. 22 a 54. Since the interrogative mannu may be expressed by the ordinary word for 'man' (galu, mulu) we may expect the word na to be employed in the same sense. In fact an, eviderally connected with na=amelu, is translated by ia-'-u and ia-a-ti, CT. XII 4 b 1 f: an, here, is for a-na the interrogative a plus the word for 'man'. Although we have no instances of the employment of an, a-na, or the simple forms ni and na for the interrogative adjective aiu, iau, aiitu, iati, yet the sign NI has the sign name ia-u0 and one syllabar u0 assigns the Sumerian

§ 168. Sumerian employs the word for 'thing, anything' (mimma), nig in the sense of a relative relating to inanimate objects. (v. § 154) becomes ni-te(n). Two constructions, the appositional and the suffixed, are possible. In the case of apposition the word ni, or ni-te(n), may be placed before or after the pronoun or noun; in the suffixed construction the pronoun emphasized is suffixed to ni, ni-te(n), the latter being the Semitic construction.

One may say  $m\bar{e}$  nl, nl  $m\bar{e}$ , 'I myself', or nl-mu, 'my own self'. nl-zu-sil=ana  $ram\bar{a}ni$ -ka. nl-ba=ina  $ram\bar{a}ni$ -su (oblique case of the neuter possessive), IV R. 9 a 22. Notice the double construction in e-ni nl-te-a-ni=ina bit ramnisu, where nl-te-a-ni is the reflexive of the suffix in e-ni'. nl may even be employed to emphasize the prefixes of a verb as in nl mu-un-zal me-e, 'I myself am satiated', where nl strengthens the subject mu.

The reflexive object is similarly expressed,  $nl \ mu$ -[un]- $s\bar{\imath}g$ - $s\bar{\imath}g$ -gi, 'he has trodden me down, even me', SBH. 5, 8.

The word ni-te(n) is treated as a noun and occurs as a genitive. šag ni-te-a-ge=ina lib ramāni-šu, literally, 'heart of himself'.

## CHAPTER VIII.

#### Numerals1.

§ 170. The Sumerian system of writing numerals upon stone, i.e., the primitive lapidary style as found upon the inscriptions mentioned in § 72 is as follows. For the unit one the scribes made a club-shaped line originally placed perpendicularly, as all the primitive pictographs were placed, but in the evolution of writing the sign became horizontal, later or an elongated semicircle which in cuneiform style soon developed into —. The figures up to and including eight were written by placing the necessary number of units in one or two lines, DD='two', DDDD='eight'2, etc. For 'ten' the lapidary system employed a circle • which became in cuneiform. By combining these two signs the scribes were able to represent the numbers 11-18, and by doubling, trebling etc. the sign for 'ten', the figures 20, 30, 40, 50 were readily obtained. Here began with 'sixty' a third order of numeration, designated by simply en-

- 1. Compare Sayce, ZDMG. 1873, 696-702; Lenormant, Langue primitive, 150-64; Hommel, ZK. I 210-4. The standard work on numerals is Thureau-Dangin, REC. 81-90 and notes under no. 119. See also Allotte de la Fuÿe, RA. VII 33-47. The systems of numeration for land, and liquid and dry measures, which follow purely conventional principles, are not discussed here since they form no part of comparative philology. Sumerian metrology has been brilliantly exposed by F. Thureau-Dangin, JA. 1909 pp. 79-111.
- 2. Perhaps we may assign the stone fragment of Sippar, OBI. vol. I photos pls. VI-VII, to the earliest period. The system of writing the numerals is primitive here also.
- 3. 'Nine' is written from the earliest period onwards as '10 less 1', \( \), later \( \), \( \), \( \) \( \), \( \

The orders.

larging the sign for 'one'. In the cuneiform script the original position was maintained, hence represents the first unit of the sexagesimal system from the period of Dungi onward. The next higher order is obtained by multiplying the units 'ten' and 'sixty'=600, represented by placing the circle = 10 within the large elongated semicircle = 60, as in AO. 4238 obv. II 1, or partly within as in REC. 488, cuneiform . This unity multiplied by the sexagesimal unit 'six', gave the next higher order 3,600, written with the sign for 'ten', enlarged • which became and finally  $\triangle$ . 3,600 multiplied by 10 = 36,000, is represented by the large circle (3,600) with the smaller circle (10) placed within, REC. 490, cuneiform ( This in turn multiplied by six gave the highest number yet found in classical Sumerian, i.e., 216,000, apparently represented by gunifying the sign for 36,000 3. It will be noted that the system is really a combination of the sexagesimal and decimal systems, the various ascending orders being obtained by the alternating multipliers 6 and 10. The progression is 1. 10. 60. 3,600. 36,000. 216,000 4.

§ 171. A secondary system of writing the digits 1-8 arose by retaining the sign for 'one' in the original upright position or by carrying out the process of inclining the sign only partially. In the earliest cuneiform script 'one' appears arrested as \which soon regained its original position \wedge . The scribes employed both \warpha and \wedge , \wedge for 'one', \DD and \wedge , \wedge \wedge , \text{for 'one',} \div \text{for 'two' etc., side by side in the classical period, employing the secondary system for special purposes, especially to denote lower orders of a system of measures. Thus in TSA. no. 1, an inscription of the period of Lugalanda, we find \DD before \text{\$\textsuperion \text{\text{fur}}\$} \(\lambda \text{(\$uuk\$)}\), a measure of wine = 20 \$ka\$, but \wedge before \text{\$\text{\text{\text{\text{\text{fur}}}}\$} \(\lambda \text{\text{\text{\text{\text{fur}}}}\), a small measure containing

<sup>1.</sup> The sign for 'sixty' has not been found in the earliest inscriptions, but the upright position of the unit 'one' was reserved for 60 ka or 1/5 of a gur in all periods and occurs on the Blau Monuments, cf. REC. 497.

only two ka, and  $\$  before the smallest ordinary measure, the ka. In CT. X pl. 24 occur examples like 0 = one gur and sixty ka. In this inscription sheep ( $\$  ) are numbered in the lapidary style, but fish in the secondary style. In RTC. no. 16 we find the lapidary sign for 'one', before the measure ka, but the date 'the 19th year' is written in the cuneiform style'. Gradually the form  $\$  regained its original position  $\$  and in the inscriptions of the Ur and Isin dynasties  $\$  has practically disappeared except in the expression for 'minus'  $\$  . In the cylinders of Gudea both forms  $\$  and  $\$  exist side by side in the same sense 2.

§ 172. The words for the digits and for the higher orders of the numerical system are as follows<sup>3</sup>.

Names of the numerals.

- 1.  $\dot{a}\dot{s}$ , written  $\leftarrow$   $(\dot{a}\dot{s})$  remnant of the lapidary system,  $(\dot{a}\dot{s})$  4 remnant of the secondary system<sup>5</sup>.
  - 2. min, written Y, man 6.
- 1. A kind of etiquette seems to have existed in the employment of the lapidary and cuneiform signs. Both styles existed side by side for all the units, 1-8, 10, 20, 60, etc. In certain cases the lapidary style is employed for the accounts of certain persons and the cuneiform style for the accounts of others, all on the same tablet. The scribes by employing the ancient system probably desired to indicate an etiquette which is unintelligible to us. See DE GENOUILLAG, TSA. p. LXX.
  - 2. Cf. A 6, 3, with 23, 2.
- 3. See especially Th.-Dangin, JA. 1909, 106, note 1. The signs given here for the numerals are of the late cuneiform script.
- 4. The value  $\alpha \ddot{s}$  for this sign is inferred from its meaning only. Note that is employed for ana in late inscriptions, a meaning which cannot have been obtained unless the Sumerian value had been  $\alpha \dot{s}$  a contraction of postfix  $\dot{s}\dot{u}$  with preceding vowel.
  - 5. For išten = 1D, cf. 1D-en-tu = ištentu, Strassmaier, Nbn. 13, 9.
- 6. ((which has the values min and man and the meanings 'two', 'twin' (mašû, tappû), and 'brother' (atljû) is a remnant of the secondary

value  $e\check{s}(es)$  obtained by confusion of the sign for 'thirty' with the secondary form for three &. In AL<sup>3</sup>. 130 l. 133 occurs a doubtful value mu- $u\check{s}$ . The root is apparently  $e\check{s}u > e\check{s}$ .

- 4. lammu, Scheil, ibid., 3. The same word appears in the sign name tab-lammu-bi igi-gubbu, 'tab placed four times opposite', VR. 19a59'. Written  $\Psi$  in the late script. limmu is known only from the syllabar VR. 37 a5 where this value is given for  $\Leftrightarrow$  based upon the ancient secondary form  $\Leftrightarrow$  2.
- 5. ja, Scheil, ibid., 4 and V R. 37 b 15, in the name of the sign (a, bur-ja-a-šu)=buf five times. Ordinarily written (a, bur-ja); in the early secondary script (a, bur-ja).
- 6. ašša, Scheil, ibid, 5, and V R. 37 b 23, in the sign name of  $\{(x, bur-ašša-šu) = bur \text{ six times.}$  Composed of ia, 'five', and aš, 'one', ia-aš > iaš > aš, ašša. Ordinarily written  $\{(x, bur-ašsa-šu) = bur \text{ six times.}\}$ .
- 7. imin, in the sign name, bur-imina- $š\dot{u} = bur$  seven times, V R. 37 b 24. Composed of  $i\dot{a}$ , 'five', and min, 'two', ia-min. Ordinarily written  $\dddot{\Psi}$ .
- 8. ussu, Scheil, ibid., 6, and V R. 37 b 25 in the sign name,  $burussa-\check{s}\acute{u}=bur$  eight times. Composed of ia, 'five', and  $e\check{s}u$ , 'three',  $ia-e\check{s}u>\bar{e}\check{s}u>ussu$ . Ordinarily written  $\biguplus$ .
- 9. elimmu, Scheil, ibid., 7, and V R. 37 b 26 in the sign name, bur-ilimmu-š $\dot{u}=bur$  nine times. Composed of  $\dot{t}\dot{a}$ , 'five', and lim, 'four',  $\dot{t}\dot{a}$ -lim>elim. In the early period written  $\langle \uparrow \rangle = 10$ -1. Ordinary writing is  $\frac{44}{3}$ .
- 10. According to the syllabars the Sumerians pronounced the word for 'ten'  $u^*$ . The words for the numbers 11-19 were formed by adding the names of the digits to u, 'ten'.  $u-as^*=11$ ; u-min=12, etc.
  - 1. See also Jensen, ZA. I 181.
  - 2. Notice also the name of the sign  $\langle \langle \rangle bur\text{-}lim\text{-}mu\text{-}\check{s}\acute{a} = bur$  four times'.
  - 3. Notice that in this primitive system the Sumerians count only up to five; the words for six, seven, eight and nine, are then obtained by adding the lower digits to five.
- 4. Scheil, ibid., gives the word as  $u \cdot ku$  which may be original. (To be read  $u \dot{s} u$ ?)

- 20.  $ni\check{s}$ , Scheil, ibid., 13, and CT. XI 24, 32. We should have expected the word to be  $min-u=2\times10$ . In case the original was  $min-u\check{s}u$  (see note 4, page 118) it may be that  $ni\check{s}$  is to be derived from this form.
- 30.  $u\check{s}u$ , V R. 37 d 50, and CT. XII 24, 3. From  $e\check{s}$ , 'three', and u, 'ten',  $e\check{s}-u>u\check{s}u>^1$ . The value  $e-e\check{s}$  CT. XI 24, 33 is probably the result of vowel harmony in which e has prevailed over u;  $e\check{s}u>e\check{s}e>e\check{s}e$ .
- 40. nimin, VR. 37 a 7. Composed of niš, 'twenty', and min, 'two'. Contracted to nin, CT. XI 24, 34 = 27 obv. II 24.
- 50.  $ninn\bar{u}$ , V R. 37 a 15; CT. XI 24, 35. Composed of nin, 'forty', and u, 'ten'.  $nimin-u > ninn\bar{u}$ .
- 60. The original word for 'sixty' was apparently  $gi\check{s}$ , a value which may be assumed for the sign  $= 60^\circ$ . By phonetic decay  $gi\check{s}$  became  $mu\check{s}^\circ$ , and finally  $u\check{s}$ , hence often written  $u\check{s}$ ,  $u\check{s}$ , and  $u\check{s}$   $u\check{s}^\circ$ . The sign  $u\check{s}$  has also the value  $u\check{s}$  and this is in fact the reading assigned to  $u\check{s} = \check{s}\check{u}\check{s}a$ , 'sixty', in CT. XI 24, 36 ( $u\check{s} = \check{s}\check{s}$ ).  $u\check{s} = \check{s}\check{s}$  probably arose from  $u\check{s} = \check{s}\check{u}\check{s}a$ , 'sixty', in CT. XI 24, 36 ( $u\check{s} = \check{s}\check{s}$ ).  $u\check{s} = \check{s}$  probably arose from  $u\check{s} = \check{s}$  by the apocopation of initial  $u\check{s}$ . The Babylonian word for 'sixty',  $u\check{s}\check{s}\check{u}$ ,  $u\check{s}\check{s}\check{u}$  is a loan-word from Sumerian  $u\check{s}\check{u}$ , literally '1/6 of a circle', i.e., 60 degrees, and hence  $u\check{s}\check{u}=u\check{s}\check{s}$  (60) and  $u\check{s}\check{u}\check{s}\check{u}$  (1/6). The word  $u\check{s}\check{u}=u\check{s}$  must have been current in Sumer for sixty for it figures in the form for 216,000,  $u\check{s}=u\check{s}=u\check{s}$
- 600. The Babylonian  $n\hat{e}ru$  may be of Sumerian origin in which case the word for six hundred was  $n\hat{e}r$ . The late cuneiform writing is  $\uparrow \uparrow$ , evidently developed from REC. 458.
- 3,600. šár, written ordinarily  $\Delta$ ; the word šár is also translated by kiššatu, 'totality', a vast number. 10 šár is pronounced šar-u; 20 šár,

<sup>1.</sup> By vowel harmony.

<sup>2.</sup> Cf.  $V = ke\check{s}$  in the sign name of  $P = pappu-ke\check{s}\check{s}e-ku$ , and the regular values of V,  $di\check{s}$ ,  $ti\check{s}$ .

<sup>3.</sup> mu- $u\check{s} = 60$ , SBH. 92, 25.

<sup>4.</sup> Cf. Peiser, KB. IV 194. These two signs are not employed for 'sixty' in the classical period. The late numerical signs V = 100 and V = 1000 are pure Semitic phonetic writings, me from me'at,  $\pi_{ij}$ , and  $\lim_{n \to \infty} I_{ij}$  from  $\lim_{n \to \infty} I_{ij}$ .

šar-niš; 30 šár, šar-ušu; 40 šár, šar-nimin; 50 šár, šar-ninū. 60 šár, according to the text from which these values are taken, CT. XII 24 b 1 ff., is pronounced šar-muš =  $216,000 = 60^{\circ}$ , but according to II R. 45 f 28 f. šu-uš-ša-ar, and Meissner, APR., pl. 58, col. VIII 15 šu-šár, where the word for 60 is šuš, placed before šar. In Hilprecht, op. laud., pl. 17 obv. IV 8 and rev. IV 7, šár muš or šuššar is replaced by the šár-gal or the great šar, and the next higher order, perhaps  $216,000 \times 60 = 60^{\circ} = 12,960,000$ , is šár-gal šu-nu-tag<sup>1</sup>.

Fractions.

§ 173. In the primitive lapidary style 1/2 appears to have been written with the same club-shaped sign employed for 1 but in the perpendicular position. This primitive method of designating 1/2 exists only on the prehistoric tablet AO. 2753 and (if we have not to suppose an error of the scribe) in TSA. no. 23 obv. III 4, V 2. This method of indicating 1/2 was replaced by the more natural method of tracing a horizontal line across the perpendicular club-shaped sign for 1/2 which gave rise to the cuneiform  $\rightarrow$ . The sign seems really to be identical with the sign  $\rightarrow$  maš; at least the syllabars translate maš ( $\rightarrow$ ) by mašlu, mešlu, mešlanu, and the loan-word māšu is a syn. of  $tu'\bar{a}mu$ , 'twin'. I shall assume that at least one of the Sumerian words for 1/2 was maš, perhaps in fact the only word in actual use.

The fractions 1/3, 2/3, 5/6 are based upon the denominator 6. 1/6 has the form  $c = \angle = \angle$  and  $\angle$  or one sixth of a circle, i. e., sixty degrees. The word for 1/6 is šuš a value common to both the late signs  $\angle$  and  $\angle$ , whence the loan-word šuššu = 1/6, but because 1/6 of a circle is equivalent to 60 degrees, suššu came to mean 'sixty's. šuš must have been the pronunciation for 1/6 since not only is 2/6 or 1/3 expressed by the dual of the loan-word, but we find the signs

<sup>1.</sup> Th.-Dangin, l. c., interprets 'the great  $\dot{s}\dot{a}r$  intangible'. If we assume the  $\dot{s}ar$ -yal  $\dot{s}u$ -nu-tag = 216,000  $\times$  60, the intermediate unit 216,000  $\times$  10 is omitted. CT. XII 24 has, however, two units above 216,000, i. e., the  $\dot{s}\dot{a}r$ -yal 1 and the  $\dot{s}\dot{a}r$ -yal 2. In this system the  $\dot{s}ar$ -yal  $\dot{t}=2,60,000$  and the  $\dot{s}ar$ -yal  $\dot{t}=212,960,000$ .

<sup>2.</sup> So at least in the earliest texts. Before the signs were turned to the left 90 degrees, the sign must have appeared as — (transcribed into cuneiform).

<sup>3.</sup> Such is the explanation of TH.-DANGIN, OLZ. 1909, 383.

for 1/3 and 2/3 followed by the phonetic complement ša.  $\mathcal{L}=1/6$  is not found, but using this as a basis 2/6 was indicated by  $\mathcal{L}$ , a sign frequently followed by ša. We should expect the pronunciation to have been min-šuš, 'two sixths'. The sign  $\mathcal{L}$  has the value šuššana in Sumerian, probably a transcript of the Semitic dual šuššān.  $\mathcal{L}$  is in this case derived from the ancient  $\mathcal{L} = 1/6$  doubled. 3/6 being identical in value with 1/2 (maš), the scribes did not invent a sign based upon the sign  $\mathcal{L}$  for this fraction. Nevertheless a sign  $\mathcal{L} = 1/6$  thrice, must have existed since the late sign  $\mathcal{L}$  actually means 1/2 mišlu.

4/6 or 2/3 is written 4 = 1 in the late script. This sign is also followed by 5a in a few instances<sup>2</sup>. We should expect the pronunciation to be  $lam-5u\bar{s}$ .

This fraction was also expressed by  $\iiint = 1/6$  four times, a trace of which remains in  $\iff$  šanabi = šinipu, 2/3. According to this value the Sumerian for 2/3 was šanap, or šinap.

5/6 must have been written  $\mathcal{L}$  originally, of which we have only the late form  $\mathcal{L}$ . We should expect the pronunciation ia- $\check{s}u\check{s}$ ; the Semitic loan-word is, however, parap and this is actually one of the values of  $\mathcal{L}$  a sign evidently derived from  $\mathcal{L}$  written five times.

## CHAPTER IX.

### The Verb 1.

The infinitive.

§ 179. The majority of Sumerian roots express the verbal notion by means of the form with the internal vowels i, e (§ 142). Nevertheless in case of any given root as  $\sqrt{zig}$ , 'to rage', it would be impossible to distinguish the infinitive 'to rage', or the participle 'raging', from the noun 'rage', except by syntax or the inflections which distinguish verbs from nouns. The simple verbal root is in itself neither active nor passive, present, future nor past. In fact Sumerian depends entirely upon external inflection and syntax to render the modal and temporal nuances of the verb. [Compare especially Thureau-Dangin, ZA. XX 383.]

Inf. as noun.

§ 180. The infinitive or simple verbal root employed as a noun. susu-(ki)-šú gin-ni, 'the going to Susa'². e-a-ni dū-ba mu-na-dúg, 'because of the building of his temple he spoke to him'³. d·ningirsu-ge umma-(ki) zigga-bi ni-falam, 'Ningirzu smote the uprising of Umma'¹.

Often employed with the preposition da. zid-du-e šu-si-sá-da,

§ 181. The simple verbal root is also employed as a participle in both active and passive senses.  $ama\ \hat{g}en$ , 'begetting mother'.  $a-ma-ru\ ziga$ , 'the on-rushing storm'.  $dingir\ mes-lam-ta-\dot{e}-a$ , 'the god arising from Meslam', a title of Nergal.  $d.im-dugud-(mu\check{s}en)\ an-\check{s}dr-ra\ sig\ gi-gi$ , 'the Zu-bird gleaming in the expanse of heaven'.

We have here six participles all in the oblique case, agreeing with the noun é-a, exterior object of the compound verb zag-sal¹0. Notice here that the active participles sig-a and il-a govern the status rectus, ukkin-ni and dug-li, with the full force of a finite verb.  $g^{is}ginar$  zagin-dú il-a-na lugal-bi ursag d-ningirzu d-babbar-ám mu-gub, 'in his chariot bearing splendid lapis

Suffixed conjugation.

§ 182. The psychological problem of greatest moment in the expression of thought is the relation of the subject to the abstract verbal notion with which the subject is concerned. The methods employed by different peoples to indicate the psychological relation between the subject and the verb, the so-called 'conjugations' of the languages, are usually the most important feature of the grammar of a language. The most simple method which occurred to primitive man and one which we find employed in linguistic morphology throughout the world to indicate the connection between the subject and verbal root consists in treating the infinitive as a noun with a pronominal suffix referring to the subject. Thus the entire postfixed active conjugation of Indogermanic languages arose, as  $\varphi\eta\mu^l$ , 'I speak', from  $\varphi\eta$  and the primary ending of the first person singular, directly connected with strong stem of the word for 'I', \*me. Likewise the postfixed conjugation in the Semitic group is primar-

<sup>7.</sup> The method of 'binding' subject and verb.

ily derived by adding the personal pronouns to the verbal root, kašad, 'to conquer', kašdak, 'I conqueror': here the inflection of the first person is clearly connected with the independent form of the personal pronoun  $an\bar{a}ku$ , 'I'. The connection between the verbal root and the pronominal suffix is one of apposition and not of possession. The suffixed conjugation would be illustrated best by the phrase 'man — go — he', 'man — going — he', 'man — he goes', i. e., 'the man goes'.

Likewise in Sumerian we have a suffixed conjugation; although in the evolution of the language this conjugation appears almost exclusively in dependent phrases, yet it must have existed side by side with the more important prefixed conjugation from the beginning. zig-zig-zu, 'thou ragest', clearly stands for the root zig and the independent pronoun of the second person singular. Other examples are:—a nu-nag-a-nu, 'water I drink not'; e nemma-ni e nemma-ni e ni, dib-e ni, 'at his word on high heaven trembles of itself'; e ni, e ni, 'they cry to thee'.

§ 183. Although traces of this primitive suffixed conjugation in independent sentences may be noted at all stages of the language, yet the construction appears more often in dependent phrases. Without reflection we would presume that the suffixed dependent conjugation is identical in its inherent force with the independent conjugation, and that the reservation of the construction for dependent phrases is a pure convention. The distinction is, however, based upon a difference of relation between the verbal root and the suffix. In the independent construction the pronoun represents the subject as an appositional idea. It is suffixed to the verb solely to indicate the close relation between the subject and the verb. In the dependent construction we have to deal with the possessive suffix, and the verbal root is treated as a noun pos-

sessed by an antecedent noun. For this reason the suffixed pronoun must agree not only in number and person but in case with the antecedent subject described in the dependent phrase. isina gar-ra-na, 'at the feast which is prepared for him', literally 'at his prepared feast'!. mada gii-sag šár-šár-ra-na, 'in the land whose gii-sag is much'!. Notice that in both these cases the suffix  $na^3$  agrees in case with the nouns described by the relative phrases. In the second instance the suffix should really be attached to gii-sag but is attached to the modifying verbal root. The idea at the basis of the second phrase is 'in the land—'its gii-sag—much being'.

1 maš d-ningirzu ba-ga sal gir-zu-(ki)-ta tum-ni ni-gub, 'one kid for Ningirsu which had been brought from the baga of a woman of Girsu is here'. Literally, 'one kid — its being brought' etc.

Original suffixed conjugation confused. dumu dúr ud-šar d-sin-na an-na su-mu-ug-ga-bi gig-ga, 'As for the princely son, Nannar the Moon God, who in heaven in sorrow is eclipsed's. The fact that ni and bi in these constructions do not conform to the rule that ni should refer to persons and bi to things proves that the language had partially lost the force of the original construction's. By force of analogy the language began to employ the original suffixed conjugation by preference in dependent phrases. Thus we have igi-ug-šu u igi-bar-ra-zu ni-a ig-gal-la-am, 'before the people whom thou beholdest there is abundance in plenty'. na-am-tay-ga nig aga-mu, 'the evil which I have done (I know not)'s.

Thus ni, na, bi,  $ba^{1}$  came to be attached even to the prefixed conjugation as signs of dependent phrases. mu d.inninna-ge e-ni-ea-a-ni, 'when Innina named him'. uru(a) ba-dim-me-na-ma, 'in my city which she created'. na apparently agrees in case with the reflexive subject ba in this passage 3. According to strict rules of grammar ni and bi, employed as pure inflections of relative phrases, must refer to an antecedent in the direct case, i. e., to the subject. na and ba should refer to an antecedent in the oblique case. The only instance known to me of na employed with a prefixed form is ud temen-mu ma-si-gi-na, 'when my foundation shall have been laid', Gud. Cyl. A 11, 18, where na evidently re-enforces the passive prefix ma. The construction is not clear to me.

In late texts this suffix was assimilated to the preceding vowel,

Suffixed mu

The suffixed conjugation both primary and secondary agrees with the antecedent subject in person and number. There is, however, one notable exception in case of the suffix mu which correctly denotes the first person, but in late texts appears for the third person.  $dumu\ urud\check{s}in-na$  (?)  $azag-\check{g}a\ \check{s}u-nag-mu$ , 'Son whom in the sacred copperbowl she baptized'.  $ib-ba\ na-\check{u}m-\check{u}ru-ni\ im-ma-bar-ra-mu$ , 'In rage for her city which is plundered'.

be internally modified or externally augmented to render a considerable number of the moods and tenses. In Sumerian, however, the verbal root remains constant. It is true, as we shall see (§ 225), that the language makes a slight attempt to distinguish the present from the past, and the indicative from the subjunctive, but apart from this there is no modification of the verbal root either internally or externally. Sumerian has on the other hand developed an intricate system of prefixes primarily with the intention not only of indicating the connection between the verb, which almost invariably ends the sentence, and the subject, but of indicating its connection with the object, if the verb be active, and with the The language in fact has principal adverbial element which precedes. a profound psychological feeling for local relations and modal influences under which an action takes place. It has developed a system of prefixes which perfectly describe the material and abstract conditions under which an action transpires or a state exists.

§ 186. To render such service Sumerian selects three demonstrative elements m, n, b, inflecting all three in both the status rectus and obliquus. They thus obtained the series; a) mu, mi, me and  $ma^i$ , b) ni, ne, and na, c) bi and ba. In the early period a fourth element e completed the system. If we grant the principle here set forth, that the vowels of these elements represent the inflections of the cases rectus and obliquus then the forms with prefixed vowels um, im, am, in, en, un, ib, ab, ub would be impossible, since the vowels here have clearly no connection with inflectional endings. If for instance the prefix ib can be shown to be primitive and with the same force as bi, or that in and ni are both original and identical in meaning then we must seek for the special sense of each prefix in the consonant alone and disregard the vowel. In this case the choice of vowel would depend upon principles of harmony simply. Several reasons induce me to defend the principle

Prefixes inflected.

<sup>1.</sup> The elements mu etc. have no connection whatsoever with the pronoun of the first person. It is highly improbable that the other prefixed elements n and b are identical with the pronouns ni and bi.

that originally the prefixes, although without distinction of person and generally without number, nevertheless really possess the inflections of the cases. In the first place the prefix e clearly identical with the ending of the status rectus (§ 68), is never employed except as subject. Secondly the forms with vowels before the consonants appear to be of late origin due either to the addition of a prosthetic vowel or to euphonic attraction. Thus im as an independent prefix was originally immi probably due to an attempt to emphasize the prefix mi. ib a much used prefix in the later period possibly developed from ibbi emphatic of bi; in from inni2. In the interior of a combination of prefixes we meet with forms like mu-ši-in clearly for mu-ši-ni where in is preferred to ni for euphonic reasons. nu-um for nu-mu, nu-un for nu-ni and many other similar examples will justify the assumption that the prefixes with the vowels before the consonants are of secondary origin. This point conceded we proceed to assume that the vowels of the prefixes have the force of case endings, a principle defended by me in my Syntaxe, and one to which I shall have frequent recourse in the exposition of the prefixed conjugation.

Order and general force of prefixes.

§ 187. Strictly speaking only the forms mu, mi, ni, ne, bi and e can indicate the subject and object. Adverbial notions must be expressed by the oblique forms ma, na, ba, or by one of the infixed prepositions ra,  $š\dot{u}$ , da, ta. In practice only ni and bi are regularly employed for the object. The order of the prefixes is, subject — adverbial element—object. mu-na-ni-gub = he (mu) has placed it (ni) for her (na), in the same passage with object omitted we have mu-na-dim, the has made (it) for her'. The only attempt to divert the suffixes from their

absolute indifference to person and number is the occasional use of ne to indicate the plural dative and object. e mu-ne-ni-du, 'he has built a temple to them'. As object,  $\dot{u}^2$ -mu-ne- $\dot{g}ul$ , 'may she (mu) make them (ne) glad's. The emphatic forms immi, inni, and reduced forms im and in are illustrated by the following;  $im\text{-}mi\text{-}in\text{-}d\bar{u}$ , 'he built it', with which compare mi-ni-gar, 'she accomplished it's. In the form im-mana-ni-ib-gar, 'he constructed it for him', immi subject is partially assimilated to na. On the contrary, in forms like im-ma-ni-uš 6, 'he caused to be placed there', the element ma appears to be independent of the element im so far as the force of the two are concerned. Compare also in-na-ni-tu-ra, '(when) he brought it in for him's, where in-na apparently serves both as subject and dative object. Compare also in-ne-enba, 'he portioned out to them', Poebel, op. laud. no. 28, 10. The forms im-mi and in-ni, im-ma and in-na may be both emphatic expressing a single idea, or be so extended as to serve in a double sense. reduced forms im, in and by analogy ib (for a supposed form ib-bi) are really direct forms and can be employed only as subject or object. immi be the emphatic of mi, im-ma appears as the emphatic of ma in such cases as im-ma-bar-ra-mu=ša iššallu, 'which is plundered', where the oblique prefix im-ma clearly indicates the passive.

§ 188. The oblique prefixes have a subtle force co-extensive with the force of the oblique case of nouns, viz. of, place, means, dative of the oblique object etc.

We have already seen the oblique infix in its use as dative of indirect object, as in e-ne-BA, 'she gave to them'! sub mu-ne-túm, 'he raised to them a prayer'! The locative idea appears in the following;  $\dot{u}$ -dúg ság-ga-zu igi-sử  $\dot{y}a$ -ma-gin, 'may thy good spirit utukku go before'. In this form ma apparently repeats the locative notion in igi-sử, the subject being dropped after the precative prefix  $\dot{y}e$  harmonised with ma. The temporal force appears in gig-a ma-ni-nad, 'in the night I lay down'. We have in the latter example the subtle association of the subject with adverbial ideas which brought about the passive and reflexive force of ba discussed in the following paragraph. The subject when intimately associated with an adverbial idea in the sentence is often expressed by an oblique form thus describing the subject as intimately acting in a given manner.

é-maj-ni-a mu-na-ni-túr. 'in her mighty temple he has brought it in '6. Examples of the locative force of the oblique prefixes are confessedly rare and even those here cited are capable of being interpreted as ethical datives, 'for me, for him, for her' etc. Nevertheless I shall assume that these particles have, at least inherently, this force.

The passive.

§ 189. ma and ba may indicate the subject in the following constructions. a) By phonetic harmony as in ma-ra-gar for mu-ra-gar, ba-ta-e for bi-ta-e. b) Or the oblique case here represents the subject as acted upon by an instrument, or some external force, or as acting for itself, in its own interest. ma and ba thus came to express the passive

Middle voice.

§ 190. The middle voice can be exemplified for ba only (na was avoided since it would have been confused with the negative na). ud-ba pa-te-si-ge kalam-ma-na zig-ga ba-ni-gar, 'then the patesi in his land took taxes for himself', Cyl. A 14, 7. In Cyl. B 4, 2-5 occur mi-ni-gar, ba-an-sum and ba-ni-sig in identical constructions, with the difference that the two forms with ba add the nuance of reflexiveness to the verb. The choice of ba for the middle voice to the exclusion of ma depends upon an inner psychological distinction of the elements m and b which as yet escapes us. ma in the middle voice may exist in nam-ni ma-ni-kub-du, 'whose oath he has sworn for himself', SAK. 18 V 33; compare the active nam mu-na-kud-du, 'an oath he has sworn to him', ibid. 14 XVI 19,

Difficult constructions of oblique subjects. § 191. An indirect element may, as we have seen, stand for the subject in case the subject is intimately connected with an adverbial notion, or has been harmonized by an indirect element. There remain, however, examples whose constructions offer great difficulty as  $ma \cdot d\bar{u} \cdot na$ , '(to the patesi) who shall construct (my temple)' 2. Apparently ma here represents the subject without any accessory notion whatsoever. Oblique subjects are particularly frequent in compound verbs;  $a \cdot ba \cdot il \cdot il$ , 'he exalted it' 3.  $gu \cdot im \cdot ma \cdot sig \cdot sig$ , 'it will enrich' 4.  $gu \cdot ma \cdot sig \cdot sig \cdot ne$ , 'they assemble' 5. In certain cases ma appears to indicate the dative of the first person, as in  $nig \cdot mas \cdot gig \cdot ge \cdot ma \cdot ab \cdot gin \cdot a - ma$ , 'that which midnight brought to me', where the subject seems to be omitted 5. The same construction

If al as subject be inexplicable the prefixes ab, am and an as subject are no less so. ab subject in  $ab-d\bar{u}\cdot a$  'which had been built'; ab-us-sa 'it is placed', both passives; but active in  $la\dot{g}$   $a\dot{b}$ -mal-mal=nura ta-sakkan, 'thou bringest light'.

These forms according to the theory defended in this exposition are all incorrect and most of them are late and rare.

An especially curious form is e-PI-bal, i. e., e- $m\bar{e}$ -bal, in dub-bi e- $m\bar{e}$ -bal, 'he has rendered unto them their account's, where  $m\bar{e}$  evidently represents the dative plural, possibly identical with the definite plural me, distinguished from the indefinite dative plural ne<sup>9</sup>.

mē.

§ 193. The prefixes seem originally to have had local distinctions. e is employed for a subject which acts at the place where the tablet is redacted. mu denotes a subject near the centre of action. bi and ni denote those subjects which are at some distance.

In his article Sur les préfixes du verbe sumérien, Fr. Thureau-Dangin has discussed these local distinctions of the prefixes so far as they concern the subject, distinctions which seem to have been observed in the early period only and even then chiefly in business documents where clearness was especially necessary. I have been able to accept his theory only in part.

e denotes a subject dwelling at the place where the document in question was written, termed by TH.-D. the 'centre'. mu denotes a subject dwelling in the 'exterior'. Thus in Nik. no. 97 the secretary (nubanda) of the royal granary delivers grain to the overseer of slaves (pa arad-dé-ge-ne); the form employed is e-ne-bal. But in no. 98 the overseer (pa) of a field (outside the city) delivers grain to the secretary (nubanda); the form is mu-na-bal<sup>2</sup>. In TSA. no. 29 the secretary gives provisions to the mule-herd; e ki-ka-la-ta en-ig-gal nu-banda lugal-sīg-è sib-dun-ra e-na-sum, 'from the house Kikala, Eniggal the secretary, has given to Lugalsige the mule-herd'. On the other hand, Nik. no. 146, the nubanda, the priests of different gods and others bring sheep, wines, grain etc. to the palace; ezen d.ba-ú-ka \* šág-šág dam uru-ka-gi-na lugal šir-bur-la'-(ki)-ka-ra ė-gal-la mu-na-tūm, 'At the feast of Bau unto Šagšag wife of Urukagina, king of Lagash, in the palace they have brought'. kūr-X 5-(ki)-ta ur-d-en-ki dam-kar X 6-tūr dam pa-te-si-kara mu-na-tim-am, 'From Kur-X Ur-Enki the merchant unto X-tur, wife of the patesi, has brought'7. We may regard this point as sufficiently evident.

- 1. The theory that a particle has in itself the power of denoting the *direction* of an action and the beautiful hypothesis of action from the centre (a) and toward the centre (ma), and from the exterior back to the exterior (ba) and from the centre back to the centre (ni) is linguistically too mechanical.

bi indicates a subject remote from the centre. The notion of self-interest, i. e., the dative force of the oblique case, is expressed by ba. The subject (ba) comes and acts in his own interest. In fact bi may represent a subject acting from a distant place, as in the phrase šu-bi-dīg, 'they have caused slaughter', a phrase used in the tablet' of Urukagina which describes how the soldiers of Umma came to Lagash and slew the people in their sanctuaries. Often in the phrase gin-šū bi-sīg, 'he smote with the axe', employed especially in the inscriptions of Eannatum to describe the conquest of foreign countries.

The use of the prefix bi is rare and in business documents of the classical period almost exclusively confined to the phrase giš-bi-tag, 'he slaughtered'2, employed of slaughtering sheep for sacrifice3. ba would then represent a subject acting from a distance for himself. Thus in RTC. 46, a list of sheep brought to Lagash, in one instance we find the entry, su-bi bur-d nidaba X -bi ba-túm, 'its pelt Bur-Nidaba the tanner has taken away'. Especially clear is RTC. no. 25; a merchant goes from Lagash to Umma taking copper to purchase gold; he is given the copper by the wife of the patesi in Lagash (e-na-lal, 'she has weighed out to him'); the phrase concerning the merchant runs, da-dulul dam-kar umma-(ki)-šú ba-tum, Dadulul, the merchant, has taken (the copper) to Umma'. mu having the force of near association is clearly distinguished from the ethical ba of remote association in Nik. 293; "One mana of pure gold for purchasing slaves Ur-é-Innina, merchant for the 'House of the Women', has taken (ba-túm). Therewith one slave for 14 shekels of gold he has brought back mu-túm, and Urki the gardener has taken him  $(ba \cdot t \dot{u}m)$ ". Here the two prefixes are distinguished by a feeling of nearness in regard to mu, and of remoteness and foreign self-interest in regard to ba. In the case of mu the subject acts for the 'centre'; in the case of b the action, although in both cases

originating at the centre and in the second case remaining at the centre, nevertheless, has an aspect of 'otherness', if we may employ a psychological term. In DP. nos. 69. 70. 71 the ordinary phrase a-mu-ru, 'he dedicated', appears as a-bi-ru, probably because the redactor of the tablet wished to emphasize the remoteness of the subject.

A sense of remoteness, perhaps not so vivid, attached itself to ni, clearly distinguished from e in TSA. no. 6. Here an official of the patesi brings (ni-lai) resinous products from the plantations of his master. The patesi pays (e-na-lai) from the income (?) of the month Udu-zid-še-a of Nipgirsu. In RTC no. 31 the fishermen bring fish mu-tum-a and the secretary (nu-banda) puts (ni-gub) them in the storehouse. Here the nearness of association of mu, the feeling of action towards the 'centre', is clearly distinguished from ni which though acting at the 'centre' yet conveys the notion of 'removing'.

ni and bi conveying the notion of remoteness naturally became the prefixes reserved to express the object. mu, capable only of associating itself with an action arising outside of, but closely connected with the point of view of the writer, was universally reserved for the subject. e, denoting a subject at the centre, disappears for the most part before Gudea 3. The point to be held firmly in mind concerning these elements is the psychological feeling for the degree of nearness, association and remoteness in the mind of the writer. e may be the subject of an action operating at or from the centre. The direction of the action is not inherent. In the nature of the case the action would more often be towards the outside, but cf. e-durun, '(the sailors) rest (in the boat)''. šag-galu-36000-ta šu-ni e-ma-ta-tib-ba-a, '(when) he (the god) had caused him to abide among 36000 men's.

With mu, denoting a subject near the centre, the action will be more

often toward the centre but there is absolutely nothing in the prefix itself which determines the direction of the action. We have for example in a text of the classical period, Nik. 291, en-ig-gál nu-banda mu-šid, 'Eniggal the secretary has counted', but no. 170 e-na-šid, 'he has counted out to them'. It would seem that the sole basis of distinction here is the degree of nearness to the 'centre' in which the nu-banda acts. Since e subject, acting at the centre, is incapable of being inflected to show self-interest as ba and ma, the language renders this nuance by infixing ma; e-ma-lág, 'he has carried away for himself'. udu-nitag lugal-sašušgal udu-sig-šú nigin-mud e-ma-ras, 'one male sheep of Lugalšušgal, for wool-bearing sheep, Niginmud has caused to be transported for himself'.

§ 194. If the subject may be emphasized by doubling the characteristic consonant (§ 187) as  $immi\ (\bar{\imath}mi)$ ,  $inni\ (\bar{\imath}ni)$ , the same process is of course possible in case of the adverbial element;  $mu\text{-}un\text{-}na\text{-}d\bar{u}$ , and  $mu\text{-}na\text{-}d\bar{u}$ , 'he built for him', in exactly the same sense, SAK. 182 a) 13 and 15. mu-un-na-an-gi-gi, 'thou hast restored it to me'. ge-en-ne-ib-tar-ri, 'may he decree it for them'.

Emphatic oblique infixes.

§ 195. Inasmuch as the principle underlying the prefixed conjugation represents a constant effort to unite the verbal-root with all possible elements of the sentence, we should expect to find a double prefix for the subject if the sentence contain two subjects, and a double infix for the object if the sentence contain two objects. The difficulty of indicating a dual subject was of course not felt since the language indicated the

plural of the verb by suffixes (§ 225). In case of a dual object, however, the conjugation ordinarily demands a double infix to correspond to each of the objects'. Šul d-babbar d-iškur ursag  $\alpha$ -ni-š $\alpha$ -ba²-ni-ib-gl-gl-eš, 'the hero Shamash and the hero Adad to their side they have brought over'3. Here the two objects babbar and iškur are repeated by the double infix ni-ib = ni-bi, arranged according to the degree of remoteness which each connotes.

If the object be modified by a noun in apposition, the appositional noun figures as a second object.  $c\text{-}babbar\ ki\text{-}dur\text{-}azag\ ...\ nam\text{-}til\text{-}la-a-ni\text{-}šu\ mu\text{-}na-ni\text{-}in\text{-}d\bar{u}$ , 'he built for him Ebabbar, the sacred dwelling'. Double prefixes for the object (ni-ir, ni-ib) are found used incorrectly for a single object, as in-na-ni-in-tur, 'he brought it to him', Poebel, op. laud., no. 8, 12; 40, 6. im-ma-ni in-sik-ki-ne, 'they humiliate (the head with oppression)', SBH. 84, 23. In such cases we have to do with a late usage.

generally repeated in the prefixed conjugation, and placed before the infix of the object as  $e \cdot na - ta - kud$ ,  $ga - mu - ra - ab - d\bar{u}$ . We may assume that originally these infixed postpositions had each the peculiar force characteristic of each of them. Nevertheless as verbal infixes each of them developed certain of their original meanings to the exclusion of others. As infixes they acquired real modal force enabling the verb to describe intricate shades of meaning.

§ 197. ra, which as a postfix ordinarily denotes motion toward a person, as a verbal infix indicates the dative of the second person almost exclusively'. éš é-ninn $\bar{u}$ -na  $d\bar{u}$ -ba za-ra ma-ra-an-dúg, 'he speaks to thee for building the house of his Eninnu's, with which compare the parallel passage  $e^{-a-ni} d\bar{u} - da \ ma - an - dug$ , 'he speaks to me for building his temple's, where the dative of the first person is apparently represented by ma with subject omitted. Theoretically every sentence, whose verb has an infixed ra indicating a dative of the second person, should have also the preceding phrase za-ra, or zu-ne-ra, but examples of the full construction are rare. The language having once confined the personal and dative force of ra to the second person, it seemed sufficient to insert the infix simply. So we have the well-known phrase in prayers ge-ra-ab-bi, 'may he speak to thee' mu-du-ru .... šu-za ma-ra-ni-indú, 'he has fittingly placed into thy hand a sceptre'. ma ra-dū-e, 'Ι will build for thee's. me-mu bar-zu si-fa-ra-ni-ib-sá-e, 'may my command direct thy soul aright'6.

ra dative of sec. per.

<sup>1.</sup> This rule first laid down by Th.-Dangin, ZA. XX 384, has few exceptions. Since ra came to be reserved for the second person, the only means left for expressing the dative of the first and third persons were the oblique infixes, ma, na, ba. ra is employed for the dative of the 3rd person in the late and barbarous form  $ne\cdot in-da-ra\cdot da\cdot a$ , 'which he adorned for him', VA. Th., 670 obv. 5 where da repeats the instrumental  $guškin rus\cdot a$ , 'with shining gold', and  $da\cdot ra$  precedes the object.

Occasionally ra is assimilated to ri as in  $\acute{g}e$ -ri-ib-gi-gi=liduk-ka, 'may it slay thee'.  $\acute{g}e$ -ri-pad=lu utammu-ka, 'verily I will curse thee'.

Infixed šú.

§ 198.  $\check{s}\check{u}$  employed as the suffix of motion toward things, in an adverbial sense, and as an accusative sign (§§ 83-93), ordinarily appears as the verbal infix  $\check{s}i^s$ . This infix often repeats the force of a preceding suffix  $\check{s}\check{u}$ ; developing the notion of 'motion towards' the infix acquired a truly modal significance, infusing into the entire verbal-form a feeling of action directed toward an object.

Compound verbs.

§ 203. Compound verbs deserve a separate treatment since in the construction of these verbs the language attained subtlety of expression altogether extraordinary <sup>5</sup>.

<sup>1.</sup> SAK. 22 b) V 26-VI 5.

<sup>2.</sup> IV R. 27 b 52; literally, 'remove (impurity)'. The figurative sense in izi im-ma-ta-lal, 'with fire chase away (impurity)'. Cyl. A 13, 13, etc. (Syntaxe 255). lal = mata, 'be lacking', lit. 'make lacking'.

<sup>3.</sup> Cyl. A 22, 12-3. Here ti repeats da.

<sup>4.</sup> Cyl. A 11, 8.

<sup>5.</sup> For literature on the compound verb see Syntame, 237 f., and Bab., II 66-99.

The majority of compound verbs were formed by combining the words for eye (igi), head (sag), hand (su), mouth (ka, gi), arm (a) with a verb of action. igi-gar, 'to see', i. e., to use the eyes. igi-tug, 'to see', i. e., to open the eyes. sag-ila, 'to elevate', i. e., to lift the head. su-tug, 'to grasp', i. e., to open the hand. a-ila, 'to exalt', i. e., to lift the arm. ka-gi, 'to revoke', i. e., to turn the mouth, alter the word'. A considerable number of compound verbs are formed with the noun ki (ken), place. ki-dur(un), 'to install', i. e., to cause to inhabit a place. ki-gar, 'install', i. e., 'make a place for'.

In the primitive stage of the language the derivation of the compound verbs was not lost sight of. In employing such a verb the speaker felt that he was applying one object to another, in other words the noun in the compound verb was regarded as the direct object and the object of the composite action was regarded as the indirect object. The interior object is applied to the exterior object, which is inflected in the oblique case. Thus the verb igi-sig, 'to cast the eye', in the sentence ga-lu-tu-ra igi-im-ma-an-sig,' has the internal object igi and the external object galu-tu-ra. The original notion would be, 'he cast (his) eye upon the sick man', i. e., 'he beheld the sick man'. The prefixes of the verb reproduce faithfully the psychological process which lies beneath this expression for 'to see'. an reproduces the interior direct object, ma the exterior indirect object, and im the subject. Compound verbs governing the oblique case I have termed compound verbs of the first class.

§ 204. I give here those examples of compounds of the *first class* whose construction I have been able to verify.

Examples of first class.

bár gir-nun-na ki-di-kud ba... á-ba-il-il, 'He exalted the shrine Girnun, place of judgemént' 6.

sá-dúg-na é d.ningirsu-ka-ta gû-ge-ib-gi, 'let one revoke his regulations from the temple of Ningirsu''.

Second class.

§ 205. In the development of the language there was naturally a constant tendency to neglect the original force of the interior object and to regard the exterior object as direct. This is especially true of the numerous compounds formed with the word for hand  $\check{s}u$ , which with its variant  $\check{s}a^{10}$  often forms causatives or served to lend a particularly active force to the verb. A compound having developed this power of acting

directly upon the exterior object, will necessarily have two direct objects and in a complete prefixed conjugation both should be reperted. A correctly prefixed compound verb will make the construction evident at once. In the first class the exterior object will be repeated by an oblique infix; in the second class by a direct infix.

For example, we have seen that the verb igi-gar in the inscriptions of Gudea governs the oblique case of the exterior object. When we meet the same verb in the inscriptions of the period of Isin it is construed with the casus rectus; lugal-e igi-ne-ne-in-gar-ri-eš-ma, 'they beheld the king'. Here the first ne represents the subject. ne-in=ni-ni, reproduces the exterior and interior objects. A glance at the parallel form igi-mu-na-ni-gar cited under § 204 will make evident the change which time has brought about in the construction of the verb. evolution of the verb sal-dúg, 'to bestow care upon', 'to care for', can be traced in the same manner. Thus we have in the period of Gudea ankár ... sal-ù-ma-ni-dúg, 'care for the ankar', where the subject falls away after the imperative prefix ù. eš-bar-kin-mal sal-ba-ni-dúg, 'she cares for the oracles'. In the latter construction the subject is apparently omitted entirely. But in a hymn of the Isin period we have salzid-ma-ra-ni-in-dug, 'he cares for thee faithfully's, where we have the double object clearly indicated together with the superfluous dative of the second person ra. The change of construction is indicated by two variants, d.nudimmud-da sal-dúg-ga-zu-dé, 'when thou carest for Nudimmud', SBH. 69 obv. 2 and d-nudimmud-e sal-dúg-ga-zu-dé, CT. XV 17, 203. Other examples in which the construction is evident are: me-mu bar-zu si-ģa-ra-ni-ib-sά-e, 'may my command direct thy soul aright'. sá-bi puḥrum nibru-(ki) tùb-bi ne-nc-in-dúg, 'The council of Nippur shall settle the affair's.

the new moon revealed to me his favorable sign''. The double infix ni-in for the interior and exterior objects is clear; if ma be taken for the subject the oblique form may be explained as the middle reflexive.

In case a verb of this class has a double exterior object then the prefixes should correctly indicate three objects as in ama tūr-bi šu-ma-mi-ni-ib-gur-ri, 'mother and son it rends asunder'.

e-sa-gab-a-bi ... kalam-ma igi-mi-ni-ib-gál, 'The temple Sagab beheld the country'3. The double infix ni-ib does not agree with the exterior object kalam-ma, which may be due to vowel harmony (for kalam-e)'.

Passive of compound verbs.

§ 206. A verb of the *first class*, if construed in the passive, should retain the oblique exterior object and the interior object should become the subject. The idea would be 'an object acted upon for or against another'. No cases of the passive of a verb of this class have been found, and in fact it is unlikely that the passive of such verbs ever existed, since it was impossible in these cases to represent the exterior object as acted upon and wholly needless to represent the interior object in that relation.

In passives of compounds of the second class the external object becomes the subject and the force of the interior object is unrepresented in the conjugation. en ki-ba-dúr, 'The high priest was installed', (passim in dates). kalam-e fjen-gál-la šu-fje\*-a-dá-peš-e, 'May the land be

- 4. A few double infixes of the object are difficult to explain where neither a double object nor a compound verb of the second class is involved. Such cases are ba-ni-ib-lal-a, 'whose diminishes (the decrees)', Gud. B 1, 16. sim-sid-dim sag-gà mi-ni-ib-de, 'pure unguents he poured out on its head', Cyl. A 27, 24 kūr-ra-šar mi-ni-ib-šuš 'it overwhelms the totality of the lands', Cyl. B 1, 9. Thureau-Dangin, ZA. XX 389 would see in these cases an attempt to emphasize the object. Most of the examples cited by him are explained by the two principles exposed above. The examples which do not fall under these heads are due to false analogy.

§ 207. In my Syntaxe (229) I defended the existence of a verb The verb me. 'to be' (esse), viz.  $\sqrt{me}$  whose essential element m appears in the emphatic particle am. This word appears as a finite verb; PI-LUL-da ud-bi-ta e-me-an (var. a), 'at that time there was slavery', SAK. 50 VII 26-8. lù-găl-bi a šu-mu im-me a gĭr-mu im-me, 'This man is the son of my hand, son of my foot is he', CT. A 5, 17. 25.

In some cases the element cannot be regarded as a verb since we have such forms as zi-me 'thou art', mu-me 'I am', forms which would be me-zu, me-mu, if me were a real verb. We have rather to do here with a widely spread assertive element, a decayed form of the real verb. To all intents and purposes it still has the force of the verb 'to be' in numerous instances; máš nu-me-a, 'which is without interest's. a-bi id-gǐr-bi nu-me-a ne-dūr, '(when) its water was not in the bed of the canal he laid them'?

With the optative negative na, the form na-me became namme as in ki-pad-da nam-me, 'a place known it is not's.

Gerundive conjugation.

§ 209. The verb me when attached to participles forms the widely used participial conjugation. In this construction the form is ordinarily attached directly to the verbal root by the vowel a and drops the final e since the accent is lost to the verbal root. Thus we have dúg-im-me 'he speaks', but more regularly  $d\acute{u}g$ - $\acute{a}m$ . Since the verbal root is potentially either active or passive, the participial conjugation may have either voice ad libitum, as gù-ni kùr-ra-ám, 'his cry is changed'. é-ta è-a-ám, it is brought forth from the temple's. giš é dul-me-gul unug-(ki)-ta túm-ám, 'the wood has been brought from the house dulme-gul of Erech's. dúg-ga-zu zid-dam sag-bi-šú è-a-ám, 'thy word is true, it arises supremely'10. Origin of dim.

§ 213. By false usage dam appears as a postfix, as in ud-dam sig-mu-na-ab-gi, 'he rendered it brilliant as the day'. It is tempting to connect the regular postfix dim = kima, with the dam here discussed. In fact the idea of a suffix, 'like unto', in the sense of a preposition (kima) does not appear to be original in Sumerian. As to the origin of the suffix dim we have, therefore, two evident suggestions. On the one hand it may have developed from dam under influence of the Semitic kima, or it may be a word borrowed directly from the Semitic word. For the present I shall adopt the Sumerian origin of this suffix, which from the period of Gudea onwards becomes an important factor in Sumerian. ti-ra-aš ab-zu-dim nam-nun-na ken-im-ma-ni-gar, 'The tira's

which also developed into the conditional are ordinarily expressed by the prefixed conjugation introduced by the particle gen. It seems that the original verbal root ijen ( meant 'to be abundant', from which developed the form gen represented only in the dialectic den, as de-enim-mi-dug-a, 'if I speak', K. 41 rev. I 14. The derived noun gan occurs only under the derived form gan in such forms as ga-na ga-naab-dúg 'verily, verily I will say to her', where ga-na evidently represents a derived form of gen. By dropping final n arose from gen, ge, from yan, ya, from yan, ya; by still further apocopation of ya the precative vowel a arose. It is impossible to decide in many cases whether we are to read *ijen* or *ije* for the sign  $\Longrightarrow$ ; the late form *de-en* which occurs frequently shews clearly enough that the original pronunciation was current as well as the apocopated form ge. Occasionally the loss of n is in a measure indicated by the addition of the vowel a, especially where ge occurs without a verb for 'verily let be', as in mu-a-ni mu ģe-gal-la ģe-a, 'May his year(s) be year(s) of abundance'. a-taģ-zu gi-a, 'thy help verily it shall be'2. Since a is derived from ya it follows that this precative particle is employed regularly for the first person. a-na a-ra-ab- $ta\hat{y}$ -e, 'what shall I add to thee'?' me-en-ne  $\acute{e}$ -e tub a-ra-su a-mu-un- $s\bar{u}b$ - $b\acute{e}$ -en, 'Oh temple repose truly we implore'  $^6$ . Yet a precative of the third person occurs; sag- $g\grave{a}$ -na a-ba-an- $l\grave{a}g$ - $l\grave{a}g$ - $g\dot{e}$ - $e\breve{s}$ , 'at his head may they stand'  $^7$ .

The plural of *ijen* optative is regularly indicated by the future ending *ene*, as *ija-ba-ni-ib-è-ne*, 'let them cause it to go away's. *uru-ki a-mi-ni-ib-nigin-e-ne*, 'the city they shall close against him's. Negatives of the *ijen* forms do not occur since the optative negative na has in itself the force of a precative, as nam-ba-gub-bu-ne, 'may ye not stand'.'. \*\* \*su na-mu-da-bal-e-ne, 'may they not change'.'.

For  $\acute{g}en$  the variant  $d\acute{e}$ -en, and for  $\acute{g}e$  the variant  $d\acute{e}$  ( $\nearrow$ ) are found from the period of the Isin dynasty onward passim. and  $d\acute{e}$ -en- $m\grave{a}$ - $t\acute{u}g$ - $g\grave{a}$ , 'may heaven appease' '2'.  $d\acute{e}$ -ra-ab-bi, 'may he speak to thee', passim in liturgies.

§ 220. The precative force of *ijen* easily adapted itself to conditional and purpose constructions. For the conditional, see K. 41 rev. 14, na-an-na-tur-tur dé-en-im-mi-dúg-a la-bi mu-un-kur-e, "If I say 'I will not

Subjunctive.

§ 221. The subjunctive is indicated by the addition of the oblique case ending a shewing that the phrase thus treated as a noun is dependent. Sumerian distinguishes clearly between a dependent phrase which merely describes a noun and a dependent phrase which defines time or which describes an intellectual conception not yet realized or whose reality depends upon a preceding act or thought. For the pure descriptive adjectival phrase Sumerian employs the suffixed conjugation3. The subjunctive phrase partakes rather of the nature of an ad-The intellectual process described in the subjunctive phrase either conditions the action of the principal verb, or depends upon the action of the principal verb. We have, therefore, two principal ideas lying at the basis of the Sumerian subjunctive: the conditional lying in the region of pure mental abstraction ; the subjunctive which describes a state resulting from a preceding act, or which develops the idea of a preceding thought (the subjunctive of indirect discourse). Fundamentally different is the temporal subjunctive when it defines time in which facts have been realised. This mood is employed here as a purely adverbial notion. ud... gu-e-na-gar-ra-a, 'When he had conquered's. ud é-ninnū é kenag-gà-ni mu-na-dū-a ģar-mu-tuģ, 'When

<sup>1.</sup>  $d\dot{u}$  for  $dul = pah\bar{a}ru$ .

<sup>2.</sup> V R. 62 α, 39-41.

<sup>3.</sup> Yet adjectival phrases occur in the subjunctive as, 'It is the statue of Gudea, galu e-ninnū... in-du-a, who built Eninnu', Gud. B 8, 3.5. 'Gudea, galu nig-du-e sīg-ne-è-a, who caused to arise in spler-lour what is fitting', Gud. F 1, 8.

<sup>4.</sup> Not to be confused with the conditional thought of as already realised, see the following paragraph.

<sup>5.</sup> OBI. 87 II 2.

he had built for him Eninnu his beloved temple, he relaxed his mind', Gud. B 7, 26-8.

The subjunctive is likewise employed in causal phrases; mu ašag PA-lugal sá-nu-ub-dúg-ga-aš 2 gin kú-babbar... in-na-an-búr, 'Because the field does not equal in value the right to the royal PA-office, he has given as redemption two shekels of silver', POEBEL, no. 37, 12.

To illustrate the difference between the simple adjectival phrase and the subjunctive phrase let us compare the following sentences: tukundi lu-sag-gù-e galu tug-mal-e-ne ba-dīg, 'Suppose that a slave, whom a man has hired, die''. Here we have the simple suffixed secondary conjugation tug-mal-e-ne indicated by ne in a purely descriptive phrase.

mu Ammiditana lugal-e lamas-lamas mas-sug-ga-ge nam-til-lani-šú šu-á(m) 3-mú-mú-ám guškin ruš-a nà-kal-la-bi-da-ge šu-á(m) 2 ne-in-da-ra-dú-a ne-in-dim-dim-ma-a d-innina nin-gal kiš(?)-(ki)-a sag-lugal-la-na-ge an-ši-in-ib (sic!)-ila-áš in-ne-en-tur-ra, 'Year when Ammiditana the king caused to be entered, for Innina great mistress of Kiš (?), who exalted his chieftainship, (statues) of the huge guardian spirits, who pray for his life, and which he had adorned and fashioned with radiant gold and precious stone'4. In this sentence we have the temporal subjunctive in-ne-en-tur-ra, and two subjunctives in an adjectival phrase, ne-in-da-ra-di-a and ne-in-dim-dim-ma-a; the subjunctive is employed here since the noun which these verbs describe is regarded as already subjected to the action of the verb tur-ra\*. Sumerian thus endeavors to represent by the subjunctive the mental subjection of a minor idea to the principal idea. Theoretically a feeling of uncertainty and unreality, a sense of adverbiality subjected to the main idea, lead to the use of the subjunctive in such constructions. Naturally out of this sense of subjection arose the subjunctive of indirect

discourse. a-na ib-ag-a nu-un-zu, 'He knows not what he has done''. ba-bi lupal-dúr-dug-e nu-ù-na-an-sum-ma-a... nam-erim-bi in-kud, 'Lugal-durdug took oath that he had not given this gift''. ud-kúr-šú lu lú-ra gù nu-mà-mà-ne-a in-pad-de-eš, 'In the future man against man will not complain — they swore''.

The conditional subjunctive is rare since Sumerian conceives of a condition as already realised, yet the construction does occur as in  $d\dot{e}$ -en-im-mi- $d\dot{u}g$ -a, 'if I say', K. 41 rev. 14 (cited in § 220). ud nu- $s\dot{u}$ -sam-sam-a-a, 'If ever he does not purchase'. galu  $\dot{e}$ - $ninn\bar{u}$ -ta im-ta-ab-e-e-a, 'If ever any one removes it from Eninnu', Gud. B. 8, 6.

Independent conditional.

§ 222. The conditional in the indicative. Sumerian in case of the conditional particle ud, 'when', distinguished two classes of conditions, one based upon the mere intellectual conception of possibility and the other upon the present realisation of the condition. In the former case ud is regarded as a relative adverb, 'when', and governs the subjunctive both in conditional and temporal clauses as we have seen. this sense ud should be translated into Semitic by enuma<sup>5</sup>. Ordinarily, however, the language prefers to conceive of the protasis as an independent sentence and the condition as already real, the idea being, 'granted that such and such a thing has taken place, then such and such things will occur'. In this sense ud is inflected in the oblique case udda, uda and means 'at this time', 'now', the formula being, 'now granted that etc.' In this sense the Semitic translation is šumma which likewise governs the indicative of ... ud-da mu-šú-sam ... lal-ma ù-na-dúg, "If he buy (a mule) let him say to him 'pay me'". ud-da enim-ba šu-ni-bal-e sašuš-gal den-lil-la ... ģe-šuš, 'If he revokes this oath may

this construction is regularly introduced by tukundi i: tukundi dam-e
dam-ma ĝul ba-an-da i-gig-a-ni dam-mu nu me-en ba-an-na-an-dúg idda-šú ba-an-šum-mu, 'If a wife to her husband, with whom she hatefully conducts herself, say 'my husband thou art not', into the river
one shall throw her" i.

§ 223. Although the overhanging vowel  $\alpha$  properly denotes the subjunctive, yet there is a tendency to employ it promiscuously to mark dependent clauses of every description. In the same way the inflections of the casus rectus e, i, u, which are properly employed to mark the present and future tenses, often indicate that the phrase is independent simply. Thus we have e-ni-ba-e, 'he has portioned out's. gigasub-be mu-na-zal-e, 'by night offerings glowed to him's. e-a-ni-su mu-un-na-teg-e, 'he drew nigh unto his house'.

The rule for the plural observed in grammatical texts appears to have been often violated in practice. Thus we have in-ši-šam-e-ne, 'they have bought''. i-im-nag-nag-ne nu-mu-un-ne-si-siġ-eš,' Though they drank yet it satiated them not'2. mu-na-šù-e-ne, 'they have appointed him'3.

§ 225. The regular conjugation, as we have seen, has no means of indicating either the person or the number of the subject, by means of the prefixes. To indicate the person we should have expected the personal pronouns to have been suffixed, but such a method would have made the verbal form identical with the dependent conjugation (§ 184). The regular conjugation remained, therefore, absolutely destitute of indication of person.

To indicate the plural the nominal inflection ene would naturally be employed. But in case of the plural of verbs another inflection eš arose correctly employed only for past tenses (§ 224), whereas ene (ne after vowels) ordinarily appears only inthe present and future. This distinction appears in the classical inscriptions; nam-šág-ga\* mu-tar-ri-êš-a šu namu-da-ni-bal-e-ne, 'The destiny which they have decreed may they not change's dingir-gal-gal šir-bur-la-(ki)-a-ge-ne gii-ma-si-si-ne, 'The great gods of Lagash will assemble there's im-da-šū-ub-ba-aš, 'they hastened's šu-ba-ti-ėš, 'they have received's sib udu-sig-ka-ge-ne ... azag bi-gar-ri-êš, 'The shepherds of the wool-bearing sheep ...

returned money'. sib udu-sig-ka-ge-ne ba-gar-es, 'The shepherds of the wool-bearing sheep have brought back' (Nik. 155 rev. II). Although this usage based upon distinction of tenses is evidently classical, yet the origin of the inflection es2 is obscure. In fact it indicates the plural of the object in several passages 3. Most interesting are the two parallel passages Gudea, Cyl. A 14,4, 'The Anunnaki, ... mu-da-an-šù-šu-giėš', he has established together', and Cyl. B 5, 22, d.a-nun ... en d.ningirsu-da ki-bi mu-da-sīn(!) \*-ni-eš-am, 'The Anunnaki ... by the high priest of Ningirsu have been made glorious unto their place'. muun-ne-ši-in-ág-gi-eš, 'he has sent them' 6. In two of these examples eš denotes the plural of a personal object; it ordinarily denotes the plural of a personal subject. In the following examples es refers to things; aš-me-aš-aš-a<sup>1</sup>... ni-lag-gi-eš-a nazagin-na guškin-a azag-me-a-bi-data šu-a maģ-bi ib-ta-an-du-uš-a, '(When he had introduced) sun disks ... which he made brilliant and which he finished magnificently with lapis lazuli, with gold and silver's. Negative nu.

§ 226. The negative of the indicative is nu (employed also incorrectly with the subjunctive of indirect discourse); temporal, conditional and adjectival clauses when conveying an attitude of certainty on the part of the writer or speaker are negated by nu. As in the case of other prefixed modal particles  $\dot{u}$ ,  $\dot{gen}$ ,  $\dot{ge}$ , the subject may be omitted after the negative. di-kud-a-na  $\dot{su}$ -nu-bal-e, one does not change his decision  $\dot{u}$

## CHAPTER X

## Conjunctions 1.

§ 229. The original method of indicating the idea of the co-ordination of two neuter nouns consists in attaching the definite neuter article bi, ba to the second noun, by which means the language indicates in an agglutinative manner the notion of the unity of two concepts in one compound expression. idigna buranún-bi, 'the Tigris and Euphrates'. This suffix has the power of consolidating several preceding nouns into a single construction. gišģalub gal-gal gišesi gišabba-bi, 'great huluppuwood, ušū-wood and abba-wood's. udu sil-bi ù-bi a-dim ne-dur, 'The sheep and lambs repose also', SBP. 318, 16. \(\hat{u}r \)\(sig-bi izi \(\hat{u}-ne-tag\), 'the back and face with fire touch's. Traces of the oblique case ba are rare, this form being replaced even in classical texts by the direct case bi which was used indifferently; the force of the case endings was then lost. Likewise the original rule of employing bi, ba for neuter objects and ni, na (see the following paragraph) as the conjunction of persons, is disregarded even in classical texts so that we find examples like the following; gùn-an-šú 49 galu še-ba tūr maý-ba, 'As the grand total 49 men, apportioned with grain, small and great's. dingir galuba-ge nam-mu-un-da-an-bur-ra, 'God and man are not delivered'.

The emphatic particle ge which inherently indicates the intimate relation of two nouns and is ordinarily employed to denote the dependent relation of genitive and construct', may also denote the simple co-ordinate relation. làl já-nun-na-ge ni-kur-ne, 'honey and butter they eat'?. uru kalam-ma-ge im-mi-in-šéš-šéš, 'The city and the land they cause to wail'3.

ge marking the genitive after bi-da must not be confused with the conjunctive ge; Marduk is the ...? ana d-enlil-bi-da-ge 'of Anu and Enlil'.

§ 234. The subordinating conjunction of condition ud and the independent conditional form udda have been discussed above under § 222. ud is originally the subordinating conjunction of time. The corresponding conjunction of place is ki. Both of these conjunctions so far freed themselves from the nouns from which they were derived that they are capable of subordinating a phrase with the oblique inflection or with a detached suffix discussed in the following chapter. Subordinated phrases are marked by the suffixed conjugation, by the suffixes

Compound conjunctions.

§ 235. The agglutinative character of the language tended to the preservation of compound subordinating phrases, the suffixed particle being thrown to the end of the phrase subordinated by the temporal, local, causal or conditional element. Thus ud- $\check{s}\check{u}$  means 'at that time', but ud  $k\check{u}$ -babbar mu-un-tum-da- $a\check{s}$ , 'At the time when he brings silver'. ud  $\check{s}u$ -zid, ma- $\check{s}i$ -tum-da, 'Upon the day when he shall lay thereunto a faithful hand'. For the causal  $m\check{u}$ -...  $\check{s}\check{u}$  corresponding to the compound preposition mu- $\check{s}\check{u}$  see the example cited p. 79, note 3. The subordinating conjunction for 'after' is egir ... ta. egir  $\check{s}ir$ -bur-la-(ki) ba- $\hat{g}ul$ -a-ta, 'After Lagash was destroyed'.

en, enna.

§ 236. Sumerian evidently possessed a noun cne, enne meaning 'attainment', 'fulness', whence are derived the indefinite relative pronoun ena, ana (p. 113) and the adverbial conjunction, 'until', (adi) 'as often as', 'inasmuch as', enna, en. The same root appears in the compound preposition en ... šú, 'up to', 'unto'. en ará ilim-kam-áš ba-ýul, 'for the ninth time it was destroyed'. enna... šú may govern an infinitive, a construction which replaces an adverbial clause. en-na e-ta til-la-áš úr e-a ab-mal-mal ûr-ri ki-in ab-aga-e, 'As long as one lives in the house, he shall build the roof of the house, (and) shall construct the foundation on the earth', II R. 15 a 9-11. en-na a-ga-bi-šú, 'until forever', SBP. 332, 26. § 237. By compounding the preposition en with the word for 'time', ud-da, the compound sub-ordinating particle en-ud-da, 'as long as', arose, as yet found only in the phrase, en-e ud-da al-til-la nam-maŷ-zu ģe-ib-bi, 'As long as he lives may he speak of thy greatness'.

## CHAPTER XI

#### Adverbs.

Ordinary adverb.

§ 240. The ordinary qualifying adverb is formed by means of the suffix šú attached to adjectives and has been discussed in § 88. Other examples are; dingir lù-găl-lu dumu-a-ni-šú šu-bar-zid-zid-de búr-e-eš ša-ra-da-gub, 'The god of the man for his son to accomplish faithfully the absolution humbly stands before thee'1. ģul-li-eš=hadiš, 'gladly'2, ul-li-eš ģu-mu-un-sà-a, 'Joyfully he named me'3.

Various simple adverbs. § 241. Other adverbs are: a-dim, 'so, thus', (ki-am,  $k\hat{\imath})$ . a-dim mu-un-til-li-en-ne, 'thus they accomplish'. egir-bi, 'afterward', 'at last', Gud. Cyl. B 24, 17. egir-bi 'behind'; egir-bi galu-ra us-sa, 'from behind they stand against the 'man'. a-ba, 'and then'; e-a-ni nig ud-ul-ll-a-ta ba- $d\bar{u}$  a-ba ba-sun, 'her temple which was built since ancient days and then had been destroyed', SAK. 214 d) 15-6. a-ba gis-ne-gar, 'and then he made sacrifices (?)' s.

Interrogative adverb.

§ 242. The interrogative adverb for 'where'? and 'when'? is me, evidently identical with me the interrogative adjective me (p. 111).

- 1. IV R. 17 a 38; bur = a šru, is connected with the root bul, 'to tremble with fear.'
  - 2. V R. 62 a 39.
  - 3. Ibid. 43.
  - 4. SBH, 31, 21.
  - 5. Gud. Cyl. A 17, 26.
- 6. Notice that the interrogative adjective is translated by iau and the adverb by iau 'where?'

The simple form me-e only in syllabars. me-a za-e me-cn, 'where art thou'? me-a-e-ne, 'where are they'. Strengthened by ta the form becomes me-a-ta; me-a-ta ma-e jen, 'where am I truly'? The variant ma-a-a occurs in ma-a-a di-di-in, 'whither shall I go?' uku-zu ma-a-a a ni-laj-es, 'Thy people, whither have they taken them?' Strengthened by bi the form becomes me-a-bi; imin-bi me-a-bi u-tu-ud-da-a-mes, 'The seven, where have they been born' Also ma-a-bi occurs in ma-a-a-bi ud-me-na-dim, 'Where as in the days of long ago?'

Strengthened by the element en-na, en, 'up to', 'unto', arose the form me-en-na, me-en, 'how long?', 'until when?' (adi mati). me-en-na gašan-ma i-de-zu nigin-na-ge, 'How long, Oh my lady, is thy face turned away?' me-na tug-mal ju-mu-ra-ab-bi, ''' When repose?' may he speak unto thee''.

This form so far lost the force of the element en that the element  $š\iota\iota$  is attached;  $me-na\cdot\check{s}\iota\iota$ , 'how long'?'

- 1. These two constructions are slightly different. In the former the independent form of the pronoun is employed with the verb me, 'to be'. In the second case me-a is treated as a noun with possessive suffix.

## ADDENDA

§ 1. Kengin = Nippur. Note that Urukagina calls himself king of Lagash and Kengi, DP. 46 VIII 5. The god Ninazu of Kengi, DP. 51 VIII 6 and Ninazu appears to have been peculiarly attached to the cult of Nippur, occurring in the names of two months in the Nippurian calendar, see especially my Texts from Drehem (in press). In DP. 51 we have the phrase 'she sent from Lagash to Kengi'.

§ 20. The sign  $\not\leftarrow$  REC. 311, is the gunified form of  $\not\leftarrow$  Nik. 89 obv. I; CT. XV 15, 18 (zi-ib).

 $\S$  42. gurun > gurum, a Semitic loan-word for 'heap' BE. XXIX 2, 15 = SBH. 123 obv. 8.
